## Find out more with the web code

On some of the catalog pages, you can find our web codes: a number sign followed by a four-digit number combination.

**i** Web code: #1234 (example)

This allows you to reach information on our website quickly.

**It couldn't be simpler:**

1. Go to the Phoenix Contact website
2. Enter # and the number combination in the search field
3. Receive more information and product versions

#1234

# Electronic switching devices and motor control

Switching devices for starting, reversing, and protecting electric motors are some of the most frequently used components in automation technology. These are often designed redundantly for safety-sensitive applications. When it comes to reducing installation time and space requirements, CONTACTRON hybrid motor starters are the state-of-the-art alternative.

This is because CONTACTRON hybrid motor starters combine up to four functions in a single device. Integration into popular fieldbus systems is realized via the INTERFACE system connection or via the SmartWire-DT™ wiring system.

For protection of the entire system, the product range now includes the electronic motor manager (EMM). In addition to typical measured values such as voltage and current, the behavior of the system is monitored and protected by means of real power measurement. The process data in all popular fieldbus systems can be supplied via gateways and evaluated by a controller.

## Motor management

### Electronic motor management (EMM)

The electronic motor management modules offer all the advantages of modern real power monitoring.

The measuring and evaluation electronics for all performance classes. EMM offers the same functionality for all performance classes, only without a power section.

#### Power within limits

Monitoring is based on freely parameterizable switching and signaling thresholds for overload and underload detection. Identical or separate settings can be made for the thresholds relating to the two directions of rotation.

Parameterization relies on the real power consumed (calculated from three currents, voltages, and the phase angle), thereby offering a much more precise basis than if only the current is taken into consideration, as it is independent of voltage fluctuations and drive load. If a switching threshold is violated, the EMM initiates an emergency shutdown of the motor immediately (or with an adjustable "delay time"). In addition, a message can be sent via an output.

This state can only be deactivated via a defined reset. If the real power consumed is determined as being above or below the message thresholds, all that occurs is that a

check-back is returned for the duration for which the module was addressed.

In addition, signals are generated by the module for the recognition of the direction of rotation. Asymmetry and phase failures are detected and signaled.

Permanent status monitoring with high scanning rates and the fast semiconductor switch enable complete system protection, including motor protection.

Without any extra wiring - and with just a single device - pumps, actuating drives, fans, and tools are monitored for proper functioning, contamination (filter or similar), and wear. The adjustable "inrush suppression" time can be used to mask out the switching operation from the monitoring process.

### INTERFACE system

The INTERFACE system (IFS) consists of devices which can be connected to each other via the DIN rail connector (TBUS). A GATEWAY with up to 32 IFS devices forms the head of the INTERFACE system and manages the station.

#### INTERFACE system properties:

- Use of the INTERFACE system via the DIN rail connector for the purpose of parameterization, diagnostics, and exchange of data with one another
- Compatible with defined IFS accessories
- 24 V supply of the devices (e.g., EMM...IFS, ELR...IFS, EM-GATEWAY-IFS) via the DIN rail connector

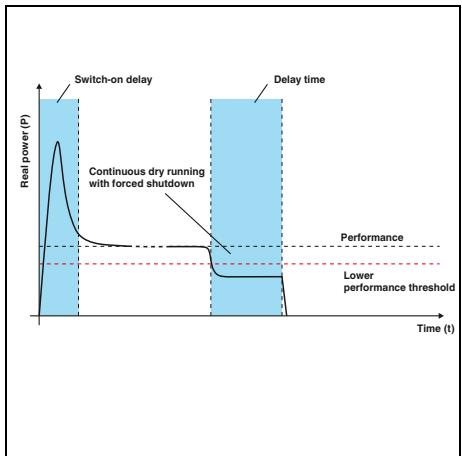

Protection against dry running, blocking, and cavitation, warning thresholds to indicate filter contamination.

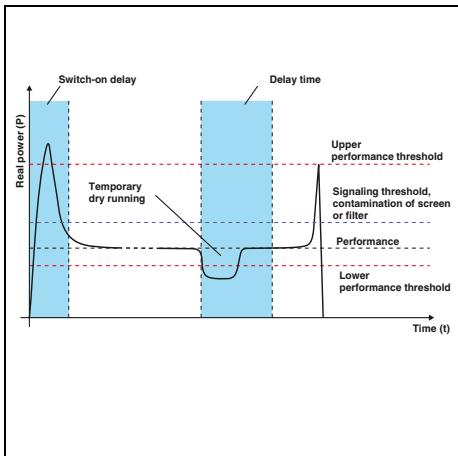

Protection against blocking, warning thresholds for bearing wear and other cases that trigger overload.

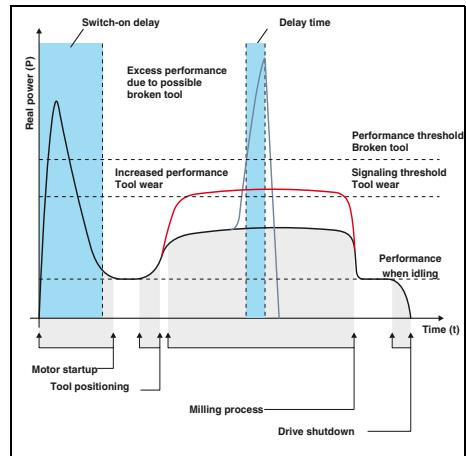

Protection against blocking and broken tools, warning thresholds for tool and bearing wear.

In the case of motor-driven pumps, the lower performance threshold provides reliable protection against hazardous dry running.

Forced shutdown of the drive can be delayed by the "delay time". This prevents forced shutdown in the event of air bubbles.

Machine tools are monitored and protected in a similar way when drilling, milling or grinding. If the feed value on a milling machine is set too high, a tool may break in the "worst-case" scenario. The power threshold - parameterized accordingly - can be used to resolve this issue.

Additionally, a message threshold signals tool wear in advance.

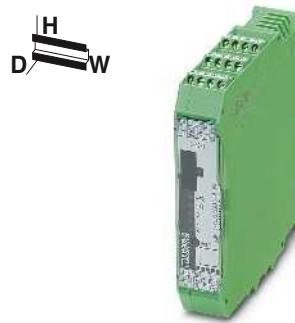

# Electronic switching devices and motor control

## Motor management

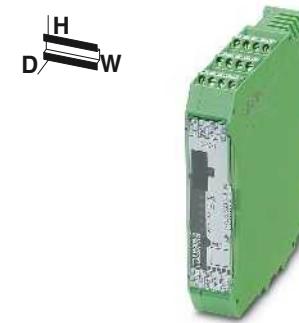

### Electronic motor management

The EMM motor management module (with/without current transformer) for all performance classes monitors and protects 3-phase loads, such as electrical drives.

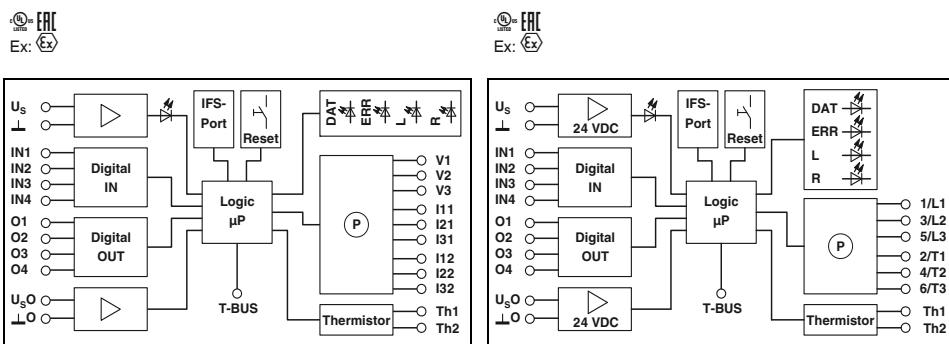

- Freely parameterizable signaling or switching thresholds
- Digital outputs control external switching elements
- Optional connection to INTERFACE system and EM-GATEWAY-IFS via TBUS

Allows the use of external current transformers

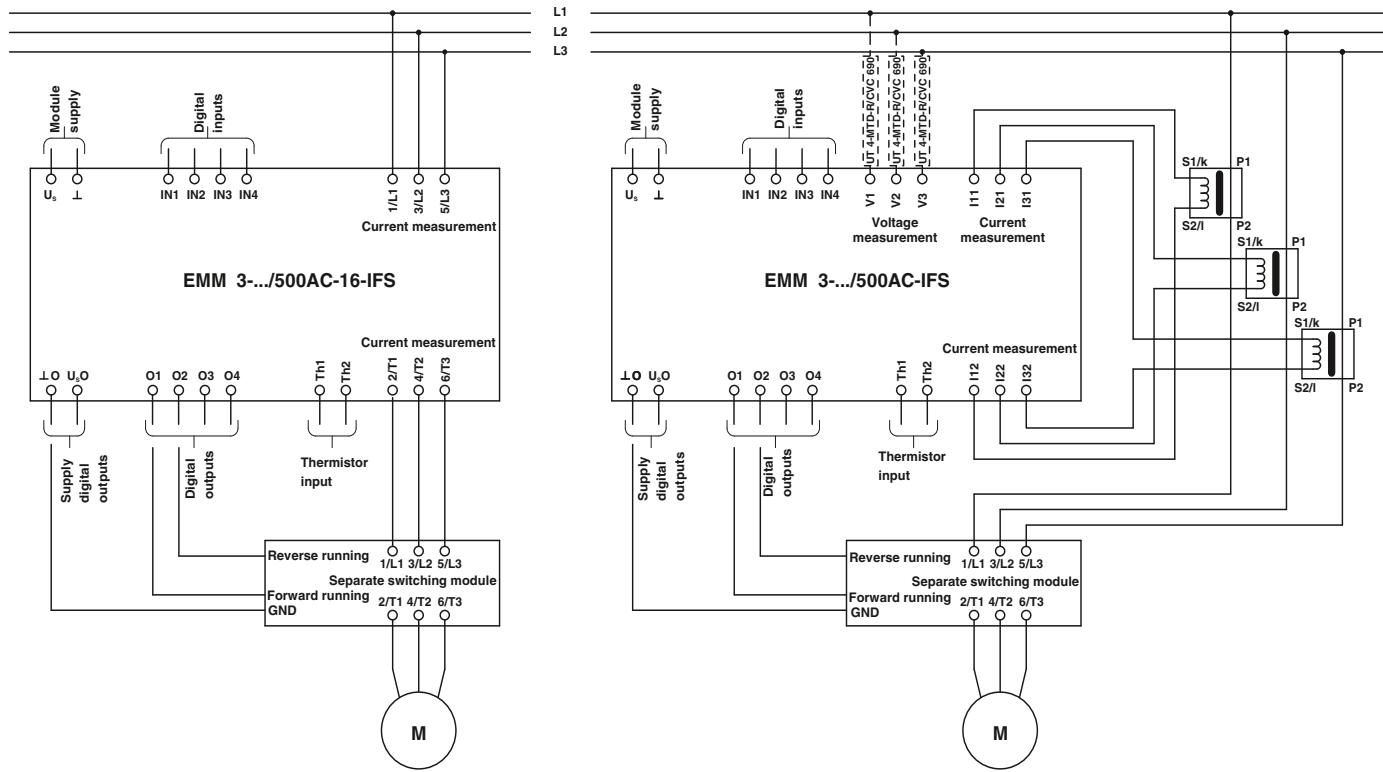

With integrated current transformers

## Electronic motor management

The electronic motor management modules offer all the advantages of modern real power monitoring. Every 6.6 ms, the real power of a drive system or of any other 3-phase load is calculated from three currents, voltages, and the phase angle. Currents of up to 16 A can be directly acquired and currents >16 A are supplied via external converters. Digital outputs can be used to control separate mechanical or electronic switching elements that adopt the actual switching of the load. In this configuration, the EMM reliably protects connected loads – irrespective of their power consumption – against overload and underload, and provides permanent status monitoring.

Up to 8 freely parameterizable switching message thresholds and up to four freely configurable inputs and outputs enable the protection of electrical drives and the system.

The EMM modules can record the following data:

- Apparent real and reactive power
- Currents and voltages
- Phase angle
- Cycle and operating hours counter
- Power meter
- Additional functions:
  - Adjustable bimetal function class 5-30
  - Thermistor monitor
  - Recording measured values
  - GATEWAY connection via TBUS
  - Pre-configured motor exits such as reversing starters, star-delta starters, etc.
- The EMM modules can be used to record complete curves that can be used for system documentation.

Actuating and regulating drives, pumps, tools, conveyer belts or similar are switched and monitored for function, contamination or wear in the following operating modes: right rotation, left rotation, reverse, and limit switch operation (with integrated restart inhibit).

### Current transformer

The external converters should be selected with a secondary nominal current of 5 A. The primary current is determined by the current consumption of the load (refer to connection diagram). For suitable current transformers, see INTERFACE catalog.

### TBUS DIN rail connector

The **TBUS** (Order No. 2707437) can be used to supply several EMMs with 24 V DC or to couple up to 32 EMMs (for example) to the PROFIBUS-GATEWAY-IFS.

### Switching element

Depending on the particular requirements of the application, either an electro-mechanical contactor or reversing contactor combination, or a solid-state contactor or a solid-state reversing contactor is to be used for the actual task of switching the load. These switching elements are controlled via the digital outputs of the EMM modules.

## Hybrid motor starters

Hybrid motor starters for controlling 3-phase asynchronous motors combine up to four functions in one device as required. These include forward running, reverse running with optional reversing function including load wiring. The locking circuit for the reversing function is also integrated and certified as a single electronic reversing starter according to UL 508a and the new UL 60947-1. Furthermore, the devices protect the motor by means of an integrated motor protection relay with automatic and remote reset function. The implemented safety function according to Performance Level e (PL e) of EN ISO 13849-1 provides the emergency stop requirement. A PDT confirmation contact provides information regarding the availability of the device, and the motor state. This means that in the event of motor control without an error message the integrated current measurement and symmetry scanning ensures that the motor is turning. Even with these numerous functions, the hybrid motor starter is just 22.5 mm wide.

Short-circuit-proof hybrid motor starters with integrated protective devices, for mounting on 35 mm DIN rails and 60 mm busbar systems and connection to popular bus systems via SmartWire-DT™ complete the product portfolio.

Hybrid motor starters with up to four functions in one device: forward running, reverse running, motor protection, and emergency stop.

Short-circuit-proof hybrid motor starters with integrated fuses for mounting on 35 mm DIN rails and 60 mm busbar systems.

Connection of hybrid motor starters in a bus system via SmartWire-DT™. Gateways are provided for the main bus systems: PROFIBUS, Modbus/TCP, EtherNet/IP™, and CANopen®.

Connection of the hybrid motor starter to a bus system via the IFS INTERFACE system.

Gateways are provided for the main bus systems: PROFIBUS DP, Modbus/TCP, EtherNet/IP™, CANopen®, DeviceNet™, PROFINET, etc.

## Hybrid motor starters

### Network-capable hybrid motor starters with reversing function

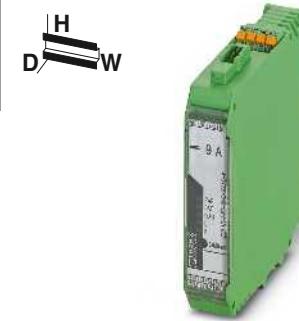

These 3-phase hybrid motor starters provide up to four functions: right contactor, left contactor, motor protection relay, and emergency stop up to category 3.

They offer the following advantages:

- Connection to INTERFACE system (IFS) via TBUS
  - Connection to SmartWire-DT™ (SWD)
  - 22.5 mm wide
  - Reduction in wiring
  - Bi-metal function, adjustable up to 3 A
  - Long service life
  - Space-saving
  - 3-phase loop bridging
- Safety level according to:
- IEC 61508-1: SIL3
  - ISO 13849: PL e

## Hybrid motor starters

### Hybrid motor starters with reversing function

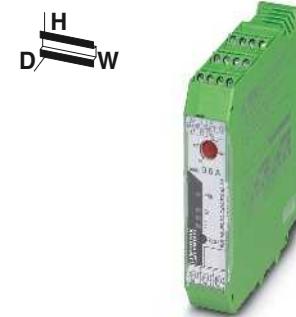

These 3-phase hybrid motor starters provide up to four functions: right contactor, left contactor, motor protection relay, and emergency stop up to category 3.

They offer the following advantages:

- 22.5 mm wide
  - Reduction in wiring
  - Bi-metal function, adjustable up to 9 A
  - Long service life
  - Space-saving
  - 3-phase loop bridging
- Safety level according to:
- IEC 61508-1: SIL3
  - ISO 13849: PL e

## Hybrid motor starters

### Network-capable hybrid motor starters with direct start function

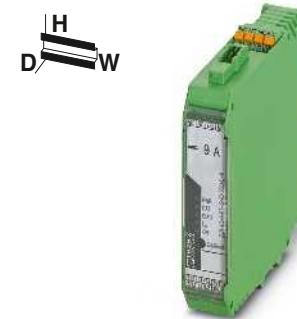

These 3-phase hybrid motor starters provide up to three functions: right contactor, motor protection relay, and emergency stop up to category 3.

They offer the following advantages:

- Connection to INTERFACE system (IFS) via TBUS
  - Connection to SmartWire-DT™ (SWD)
  - 22.5 mm wide
  - Reduction in wiring
  - Bi-metal function, adjustable up to 3 A
  - Long service life
  - Space-saving
  - 3-phase loop bridging
- Safety level according to:
- IEC 61508-1: SIL3
  - ISO 13849: PL e

## Hybrid motor starters

### Hybrid motor starters with short-circuit protection

These short-circuit-proof 3-phase hybrid motor starters for mounting on 30 mm DIN rails or 60 mm power busbars combine four functions in one device: right contactor, left contactor, motor protection relay, and emergency stop up to category 3.

They offer the following advantages:

- 22.5 mm wide
- Bi-metal function can be set up to 9 A
- Long service life
- Space-saving
- Reduction in wiring
- 3-phase loop bridging
- Plug-in motor output terminal block
- Coordination type 2 according to IEC/EN 60947-4-2

## Hybrid motor starters

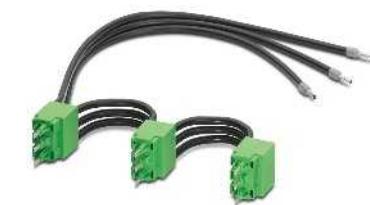

### Loop bridge for hybrid motor starters

The flexible CONTACTRON loop bridge (BRIDGE-...) simplifies the supply and looping through of phases L1, L2, and L3. It is available in 2 to 10-way versions for modules in the CONTACTRON family with 22.5 mm housing width.

Features of the 3-phase loop bridge:

- Saves considerable wiring
- Suitable for CONTACTRON series
  - ELR H3...
  - ELR H5...
  - ELR (W)3...
  - EMM...IFS
- Bridging of 2 to 10 devices with maximum module spacing of 22.5 mm
- Up to 575 V AC/3 x 25 A
- Additional bridge versions available on request

General data

### SmartWire-DT™ accessories

Devices can be integrated seamlessly into the fieldbus world via SmartWire-DT™ with the SmartWire-DT™ "EM SWD-ADAPTER" adapter for CONTACTRON 24 V DC devices. Corresponding gateways are available for the following bus systems:

- PROFIBUS DP
- CANopen®
- Modbus/TCP / EtherNet/IP™

**Intended use**

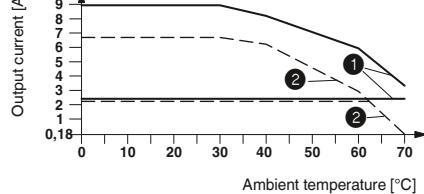

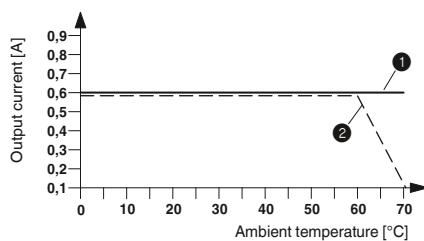

The SmartWire-DT™ adapter is approved exclusively for use in conjunction with the following CONTACTRON hybrid motor starters. If other switching devices are used, correct operation, in particular of the safety function, cannot be ensured.

## Solid-state contactors

### Three-phase solid-state reversing contactors

The three-phase solid-state reversing contactors with an integrated locking circuit and load wiring are intended for applications such as control valves, slides, separating filters, ship steering gears, etc. The scope of performance ranges from 575 V AC/3 x 2 A to 575 V AC/3 x 37 A.

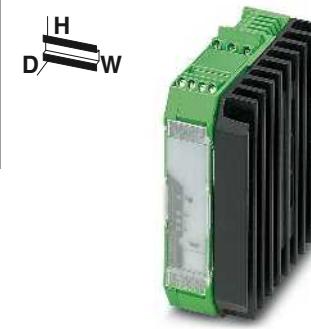

Advantages of three-phase solid-state reversing contactors:

- Noise-free and wear-free switching
- Integrated protective circuit
- Stable and short switching times
- Long service life
- High switching frequency
- Integrated locking and load wiring
- Thermal fuse optional

## Solid-state contactors

### Three-phase solid-state contactors

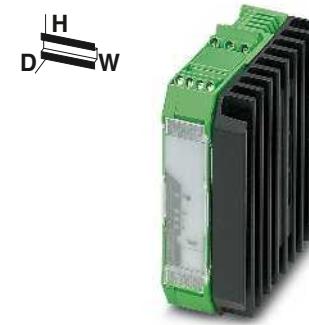

Motors of mixers, machine tools, conveying systems, pumps and fans up to 575 V AC/3x37 A (equivalent to 1 kW to 18.5 kW) can be controlled using the CONTACTRON three-phase solid-state contactors.

Advantages of three-phase solid-state contactor:

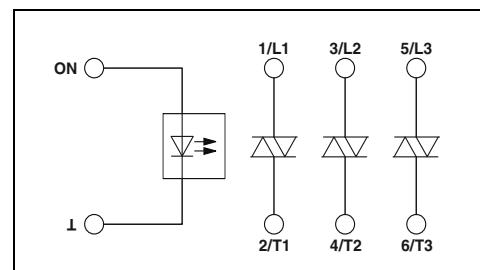

- Noise-free and wear-free switching
- Integrated protective circuit
- Stable and short switching times
- Long service life
- High switching frequency
- Thermal fuse optional

The figure shows the control of the reversing load relay with a soft starter and the operation of a three-phase current load.

# Electronic switching devices and motor control

## Solid-state contactors

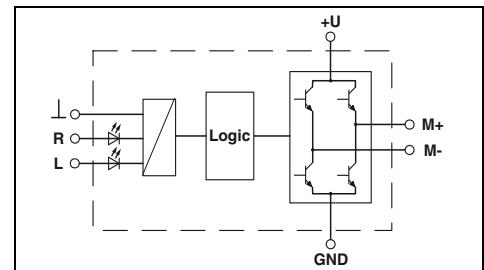

### Electronic reversing load relays for DC motors

The ELR-DC electronic reversing load relays allow mechanically commutated DC motors to be switched. They reverse and reduce the speed of DC motors up to 24 V/6 A in a wear-free manner. A short-circuit, surge-voltage and overload-proof output guarantees reliable use in the plant.

If a 24 V DC signal is applied to the "left" input, the ELR-DC is interconnected so that the output supplies the motor with voltage. If the "right" input is triggered, the polarity of the voltage is inverted on the output. By triggering both inputs, i.e. "right" and "left", the motor is short-circuited internally via the ELR-DC and reduces the speed.

Thanks to the internal interlocking circuit and load wiring, wiring effort is reduced to a minimum.

## Solid-state contactors

### Single-phase solid-state contactors

Single-phase solid-state contactors are used in AC voltage networks wherever silent switching, high switching frequencies and a practically unlimited service life are required.

The robust power semiconductors switch in zero voltage crossing and thus produce no additional high frequency interference. The modules are resistant to shock loads and vibrations – they can even be used in aggressive, polluted environments without any problems.

They offer the following advantages:

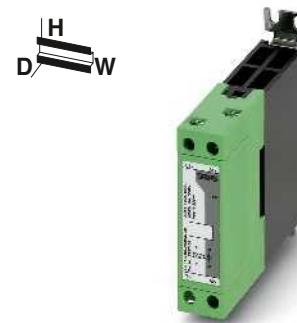

- High switching frequency
- Wear-free and output-free
- 24 V DC and 230 V AC input voltage versions

Common areas of application are:

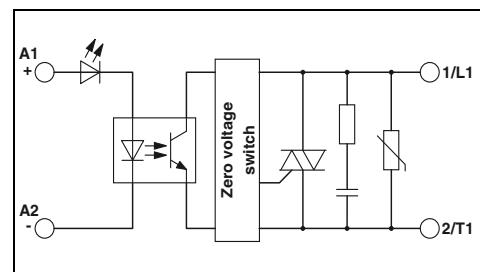

- Conveyor equipment
- Light and lighting systems
- Conveyor equipment
- Light and lighting systems

# Electronic switching devices and motor control

## IP67 motor starters

### PROFINET motor starters

Motor starters in robust stainless steel housing (IP67) can be used directly in the system as a compact function unit. This eliminates the complex wiring of individual functions in the control cabinet.

The motor starter can be used to control three-phase asynchronous motors in two directions of rotation, completely via PROFINET. Distributed sensors and actuators can be directly connected to PROFINET without the need for further intermediate stations or additional cabling. A complete PROFINET motor starter consists of three products. For example:

- ELR 5011 IP PN
- IBS IP 400 MBH-F
- IBS PG SET

#### Additional features:

- Performance classes: 1.1 kW to 3.0 kW
- One and two-motor reversing starters (CONTACTRON hybrid motor starter)
- Easy assembly
- Plug-in connection system
- Exchangeable module electronics
- Status and diagnostics indicators on the module
- 10 digital inputs for connecting sensors
- 4 digital outputs for connecting actuators

**Electronic motor starters,  
1 x 1.1 kW and 2 x 1.1 kW**

## IP20 frequency inverters

### Inline frequency inverters

Inline frequency inverters for the control cabinet are the compact solution for extending your Easy Automation solution to include electronic speed regulation for asynchronous motors. The devices seamlessly integrate into the Inline system and have IP20 protection. Depending on the drive task, you can select frequency inverters from various performance classes, up to a maximum of 4 kW. In order to connect to the Inline system via the Fieldline local bus, you just need the IB IL 24 FLM-PAC Inline module. The Inline frequency inverter can be connected to a Phoenix Contact controller via the Inline module.

#### Additional features:

- Max. motor power of 0.75 kW, 1.5 kW, 2.2 kW, and 4.0 kW
- 3 x 400 V mains input ( $\pm 15\%$ ) 50/60 Hz
- DTM for parameterization and diagnostics
- 8 freely programmable parameter records
- PTC evaluation for 2.2 kW and 4.0 kW versions
- Integrated line filter
- U/f linear and U/f square operating modes
- S-ramp function
- Motor protection function ( $I^2t$ )
- Connection of a braking resistor
- DC braking
- Evaluation of the temperature switch in the motor
- Voltage boost
- 1 x analog input, 1 x analog output, 1 x relay output

Frequency inverter for max. motor power of up to 0.75 kW

Technical data	
Interface	
Designation	Fieldline local bus
Connection method	9-pos. D-SUB connector/socket
Power supply for module electronics	
Supply voltage	24 V DC $\pm 15\%$
Supply voltage range	20.4 V DC ... 27.6 V DC $\pm 15\%$
Digital inputs	
Number of inputs	5
Connection method	COMBICON
Connection method	Spring-cage connection

# MCR technology

From highly compact 6 mm signal conditioners to functionally safe signal conditioners through to signal isolators for intrinsically safe circuits in the Ex area: our signal conditioner range offers a solution for all applications in analog signal conditioning.

We offer the following product ranges:

## Highly compact signal conditioners with plug-in connection technology – MINI Analog Pro

For maximum convenience during installation and service

- Overall width of just 6.2 mm
- Current measurement without isolation
- Safe electrical isolation

## Highly compact signal conditioners – MINI Analog

For significant space savings and efficiency

- Overall width of just 6.2 mm
- System cabling and multiplexer solutions
- Electrical isolation

## Signal conditioners, head transducers, and digital displays – MCR Analog

Electrical isolation

- Record and convert temperatures directly in the field
- Display process values

## Signal conditioners with SIL functional safety – MACX Analog

For maximum signal safety

- Consistent SIL certification
- Safe electrical isolation

## Signal conditioners with PL functional safety – MACX Safety

The proven MACX range for safety applications according to the Machinery Directive

## Ex i signal conditioners with SIL functional safety – MACX Analog Ex

For intrinsically safe circuits in the Ex area

- Maximum explosion protection for all Ex zones and gas groups
- Safe electrical isolation

## Ex i signal conditioners with PL functional safety – MACX Safety Ex

The proven MACX EX range for safety applications according to the Machinery Directive

### Input

#### Maximum input signal

The maximum input signal describes the value achieved before any damage occurs to the module and the signal generator. If these values are exceeded, suppressor diodes can be triggered to short circuit this input when a surge voltage is detected. The transmission range of the analog signals is located exclusively within the specified input ranges.

#### Input resistance

The input resistance of a signal conditioner or measuring transducer is determined in such a way as to ensure that the input signal is loaded only slightly. This results in a low-resistance input for current inputs and a high-resistance input for voltage inputs.

#### Voltage drop

In the case of passive isolators, the input voltage drop occurs as a result of the voltage drop of the operational load and the auxiliary power consumption of the module. The greater the auxiliary power consumption of the passive isolator, the smaller the operational output load is allowed to be. Low auxiliary power consumption is regarded as an indicator of device quality.

#### Common mode rejection

In the case of signal conditioners, operational amplifiers are used internally for transmission. In theory, operational amplifiers should display ideal transmission and amplification behavior. However, it is a different matter in practice. When both input voltages are changed in the same direction, i.e., exactly the same voltage to ground is applied to both input terminal blocks, this leads to an unintended output signal. Theoretically, if the operational amplifier is ideal, no output signal should appear since the differential input signal is "0 V". Common mode rejection indicates the factor (in dB) by which the common input voltage at both inputs is amplified to a lesser extent than the difference in voltage between the two inputs.

### Analog output

#### Maximum output signal

During uninterrupted operation of the devices, an overload at the input cannot cause greater values than at the output.

#### Zero/span adjustment

When the zero point is set, the zero point of an analog output is adjusted and set in relation to the input signal.

When the "amplification" span is set, the analog output is adjusted in relation to the input signal. In this case, the output characteristic curve is increased or decreased by an amplification factor.

#### Load

The load on the output side indicates the load-carrying capacity of a measuring transducer or a signal conditioner. Current outputs can usually drive a maximum of 500  $\Omega$ , voltage outputs can be loaded with a minimum of up to 10 k $\Omega$ .

#### Residual ripple/ripple

A superimposed ripple can appear on the output signal due to signal conditioning required by the circuit. The residual ripple is indicated in mV<sub>PP</sub> or mV<sub>rms</sub>.

#### Open-circuit behavior

With some measuring transducers, the input signal is permanently monitored for possible open circuits in the signal line. If the signal exceeds or falls below a tolerance limit, an open circuit is detected and a defined output signal is sent. With programmable devices, the output signals can be freely selected.

### Digital output

#### Relays

Many of the products with a relay output that are shown in the catalog feature hard gold-plated relay contact material. The voltage range has an important role to play in terms of how this contact material can be used. Up to 50 mA can be transmitted with voltage ranges of up to 30 V AC/36 V DC. Even very small currents are transmitted perfectly. If the afore-mentioned voltage range is exceeded and values of 250 V AC/DC are processed, currents of up to 2 A can flow. However, in this case the subsequent transmission of small currents can no longer be guaranteed.

#### Transistor

A PNP transistor switching output can be used to transmit 24 V DC switching signals up to approximately 100 mA.

### General data

#### Supply voltage

The product range includes DC and AC power supplies for specific products. There is a standard power supply available in the form of a 24 V DC version that operates within a voltage range of 20 ... 30 V DC. For other supply voltages, please refer to the technical data.

#### Current consumption

The value specified here describes the self-consumption of the devices. It also includes the output current and, where applicable, the switching output load.

#### Transmission errors

The transmission precision is a gauge of the quality of a measuring transducer. It is the deviation from the ideal transmission characteristic curve and includes linearity, span, and offset errors.

#### Non-linearity

Non-linearity is the deviation from the ideal transmission precision without including span and offset errors.

The non-linearity of a signal makes it possible to evaluate the course from zero to end point. Normally, the linearity errors are expressed as a percentage that indicates the extent of deviation from the ideal transmission characteristic curve.

## Temperature coefficient

The temperature coefficient provides an assessment of the extent to which precision deviates when the ambient temperature around a signal conditioner or measuring transducer changes. In most cases this is specified as a percentage. An alternative definition is ppm/K (parts per million/Kelvin). Example: 250 ppm/K = 0.025%/K.

## Cut-off frequency

Signal conditioners are generally designed for transmitting DC signals. However, signal changes call for a dynamic form of behavior so that small AC quantities (normally: 30 Hz) can also be transmitted. This is achieved by defining a cut-off frequency. At the same time, a low cut-off frequency can be used to suppress higher-frequency AC components.

## Step response

The step response indicates the response time of the output signal when an input signal step occurs (10 ... 90%). The step response is inversely proportional to the cut-off frequency. This means that the response time decreases as the cut-off frequency increases.

## Test voltage

The test voltage indicates the electric strength of an isolated distance and is determined by type tests. In this test, a 50 Hz voltage is applied for one minute; it describes the value achieved before a disruptive discharge is able to move to another potential level in the device.

## Safe isolation

“Safe isolation” is defined as protection against hazardous shock currents. When module specifications are provided according to EN 61010, a distinction is made between error-free operation and operation under fault conditions. With error-free operation, nominal supply voltages of 30 V AC/60 V DC are valid.

## Ambient temperature range

The temperature limits specified here relate exclusively to operation. These limits do not apply to storage and transport. It is here where the temperature limits of the materials used are the decisive factor. If the devices are outside of the specified temperature range during assembly, they must be brought back within the specified temperature range prior to system startup. It is important to make sure that no condensation occurs.

## Protective circuit

In order to protect the measurement and control modules against surge voltages, suppressor diodes are connected upstream of the signal and supply paths. These diodes behave in a similar manner to conventional Zener diodes. Except for the fact that suppressor diodes have faster response times and a higher maximum current.

## Information on directives and standards

When carrying out further processing of non-independent items of equipment (components), the applicable regulations pertaining to installation must be observed.

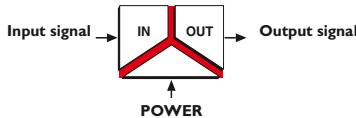

The relevant device-specific regulations also apply with regard to installation in devices.

## Basics

### Active isolation

#### 3-way isolation

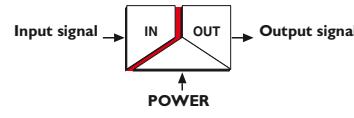

In the case of modules with this isolation method, all components that are connected to the input, output or power supply are protected against interference from each other. All three directions (input, output, and power supply) are electrically isolated from one another accordingly.

The 3-way isolation provides electrical isolation between the measurement sensor and the controller as well as between the controller and the actuating element.

On the input side, the modules need active signals (e.g., from measurement sensors). On the output side, they provide a filtered and amplified signal (e.g., from the controller).

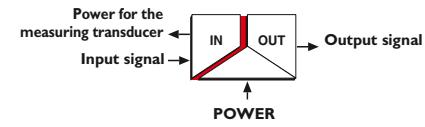

#### Input isolation

In the case of modules with this isolation method, the electronics connected on the output side (e.g., the controller) are to be protected from interference from the field. For this reason, only the input is electrically isolated from the output and the power supply which are at the same potential.

On the input side, the modules need active signals (e.g., from measurement sensors). On the output side, they provide a filtered and amplified signal (e.g., from the controller).

#### Repeater power supply

Repeater power supplies use the signal input side not only for measured value acquisition, but also to provide the necessary power to the passive measurement sensors connected on the input side.

On the output side, they provide a filtered and amplified signal (e.g., from the controller).

The isolation method used by these modules is input isolation.

### Passive isolation

#### Passive isolation, supplied on the input side

The modules draw the power needed for signal transmission and electrical isolation from the active input circuit. On the output side, a conditioned current signal is provided to the controller or to actuating elements.

This passive isolation allows signal conditioning (interruption of ground loops) and filtering without an additional power supply.

#### Passive isolation, supplied on the output side (loop-powered)

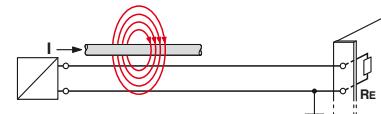

The modules obtain the power needed for signal transmission and electrical isolation from the active output circuit, ideally from the PLC input board that supplies power.

On the output side, the loop-powered modules operate with a 4 ... 20 mA standard signal. On the input side, the passive isolator processes active signals.

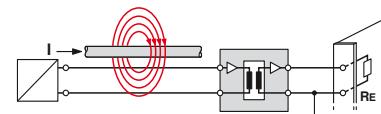

When this isolation method is used, it is important to make sure that the active signal source connected on the output side (e.g., an active PLC input board) is able to supply the passive isolator with power, as well as operate its load.

### Applications

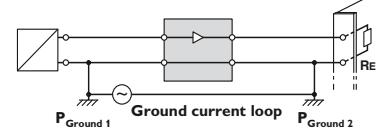

#### Problem: disruptive radiation

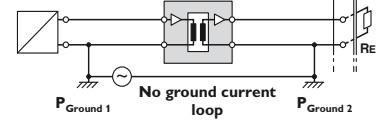

#### Solution:

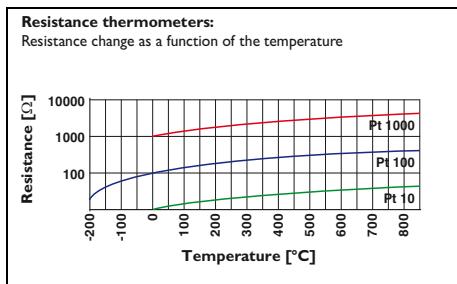

#### Problem: voltage difference in the ground potential

#### Solution:

## Resistance thermometers

Resistance thermometers (e.g., Pt 100, Ni 1000) change their resistance value depending on the temperature. The MCR temperature transducers detect this change and convert it into a proportional analog signal.

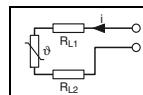

To avoid unwanted self-heating of the sensor, the constant measured current used is kept as low as possible (MCR-T-UI... → 250 µA).

### Two-conductor connection technology

The resistance thermometer is connected to the MCR measuring transducer using a two-core cable. Please note that the supply cable resistances are added to the measured resistance and consequently distort the result.

A distance of 10 m should not be exceeded.

**Example:** a 50 meter long copper cable with a cross section of 0.5 mm<sup>2</sup> has a specific resistance of 3.4 Ω. A Pt 100 sensor has a resistance change per 1 K temperature change of 0.384 Ω. This corresponds to an error of 8.8°C.

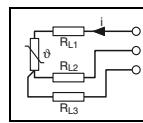

Identical cable lengths and an identical ambient temperature are essential here.

Since this is more or less the case in the majority of applications, three-wire technology is the most commonly encountered today. Line compensation is not necessary.

### Four-conductor connection technology

Four-conductor connection technology is an ideal connection technology for resistance thermometers.

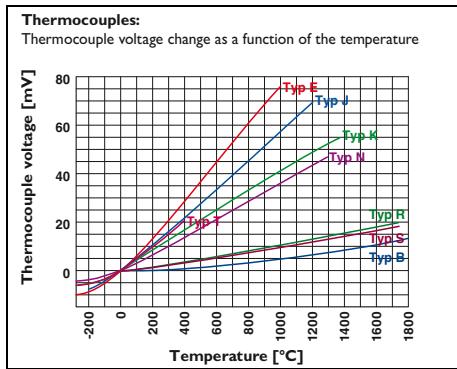

The measurement result is affected neither by cable resistances nor by their temperature-dependent fluctuations. The voltage drop on the supply and return lines can therefore be measured and compensated for separately. Line compensation is not necessary.

### Three-conductor connection technology

Three-conductor technology is normally used to minimize the effect of cable resistances. An additional cable is connected to the resistance thermometer, so that the latter can be measured using two measuring circuits, one of which acts as a reference. In this way, it is possible to compensate for the cable resistance.

## Thermocouples

In contrast to resistance thermometers, thermocouples are active sources that generate a voltage in the microvolt range. The temperature difference measured between the measurement junction and the cold junction is converted into an absolute temperature with the help of cold junction compensation.

### Operating principle:

If different metals are joined together, a thermal voltage is produced in the metal atoms as a result of the different binding energies of the electrons. This voltage is dependent firstly on the metals themselves and secondly on the temperature.

If the same temperature prevails at the

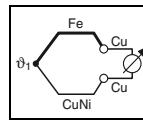

measuring junction ( $\vartheta_1$ ) and the cold junction ( $\vartheta_2$ ), no current will flow because the generated partial voltages cancel each other out.

However, if the temperatures at the measuring junction and the cold junction are different, different voltages are produced that do not completely cancel each other out, and thus current flows.

A thermocouple thus always measures only a temperature difference. This is derived from the difference between the thermal voltages at the measuring junction and at the cold junction.

The voltage produced by the thermoelectric effect is very low; only a few microvolts per Kelvin.

**Example:** If a thermocouple type J (Fe-CuNi) is connected to a copper terminal, thermal voltages with opposite signs will be generated (at the iron-copper and copper constantan transitions) and cancel each other out.

Therefore, only the difference in the thermal voltages between constantan (Cu-Ni) and iron is of relevance.

A role is also played by the temperature at the terminal point. If it is known, the temperature at the measuring junction can be derived by adding the thermal voltage measured at the same junction.

The MCR temperature transducers for thermocouples therefore detect the temperature at the terminal points and compensate this value, which is also referred to as the reference junction or the cold junction.

This process is sometimes called cold junction compensation.

## Basics

### Digital displays

#### Use of the freely programmable characteristic curve

The freely programmable characteristic curve, i.e., the assignment of the displayed value to the input value, is important in process applications for indicating flow rates or liquid levels.

The purpose of level measurements is very often not to determine how much liquid is still inside the tank, but rather to establish how much has been drawn out of it. In this case, the characteristic curve can simply be inverted in order to display the required value.

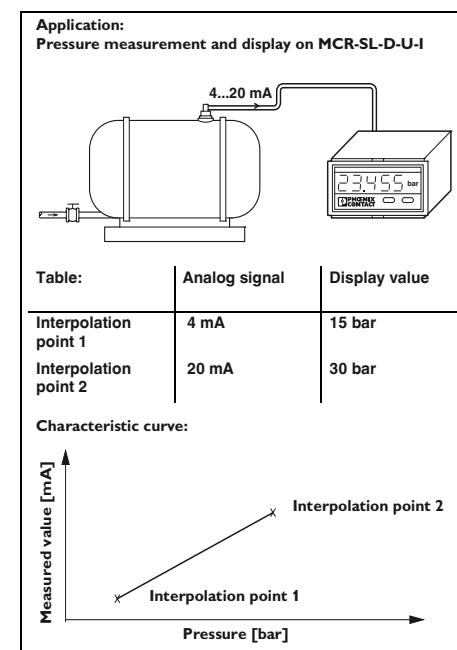

#### Parameterization of the characteristic curve using interpolation points

With non-linear input signals, the received analog values can be assigned to the value to be displayed by means of a programmable characteristic curve. This characteristic curve can consist of up to 24 interpolation points. This allows flow sensors with a non-linear characteristic curve to be adapted, for instance. The analog signal digital displays in the Function Line additionally feature a summing function which - to take a typical example of use from bottling technology - allows you to

switch over at the touch of a button from the instantaneous value (= flow rate in l/min) to the total flow integrated in the background, which can be displayed in any unit. This saves space and money, because there is no need for a second digital display.

Limit values can also be called at the touch of a button. Limit values 1 and 2 can be assigned to either the actual value or the cumulative value. If the latter value is exceeded, one of the two output relays is activated.

Other applications include indicating liquid levels, pressures, and temperatures. With servo motors, the analog output signals (0 ... 10 V) generated by the tachometer can be supplied to the input of the digital display in order to indicate the motor speed.

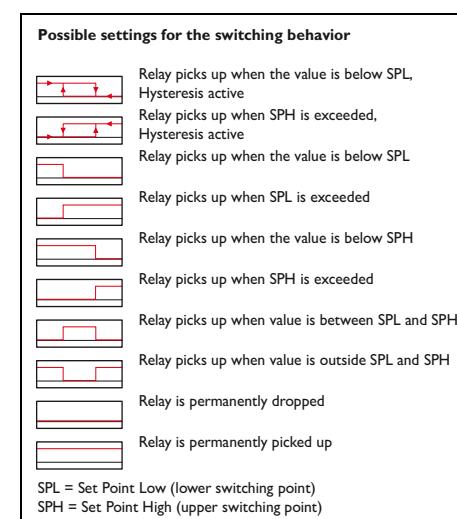

### Switching behavior of relay or transistor outputs:

A different kind of switching behavior can be defined for each relay or each transistor when it reaches a preset switching point.

All the possible settings for the switching behavior are shown and explained in the list:

- The first two options include hysteresis, i.e., the behavior of the relay depends on the direction from which a switching point is reached.
- For the remaining options, with the exception of the last two ("on" and "off"), a switching tolerance is taken into account to prevent the relay contact from "chattering". The relay is not switched until the switching point plus switching tolerance has been reached.

- In the "on" state, the relay is permanently picked up. It only responds if there is an open circuit and in this case, if the relay is set to drop out when this happens.
- In the "off" state, the relay only responds if there is an open circuit and it has been set to pick up when this happens.

## Non-intrinsically safe signal transmission in potentially explosive areas

Electrical equipment operated in systems with potentially explosive areas is subject to different usage requirements, depending on the application.

For example, electrical equipment could be used in the following locations when analog signals are being transmitted:

- Sensors and actuators can be located in zone 0, zone 1 or zone 2.
- Signal transmitters can be located in zone 1, zone 2 or the safe area.
- The controller, e.g., PLC, is in the safe area.

For examples of the kinds of electrical devices that can be installed for the purpose of transmitting signals, please see the figure.

Devices must be designed to offer a suitable protection type if they are to be used in zone 2. The MINI Analog Pro, MINI Analog, and MACX Analog ranges are designed to provide protection type "n" for this purpose and must be installed in zone 2 in suitable and approved housing

(EN 60079-15 and EN 60079-0) with at least IP54 protection class.

### Example:

A sensor/actuator with protection type "n" can be connected to an isolator from the MINI Analog Pro, MINI Analog or MACX Analog ranges in zone 2.

When selecting suitable devices for zone 2, it must be ensured that the electrical data of the sensors/actuators is not exceeded.

If the sensors/actuators are mounted in explosion-proof housing or if they have their own explosion-proof housing, they can also be installed in zone 1.

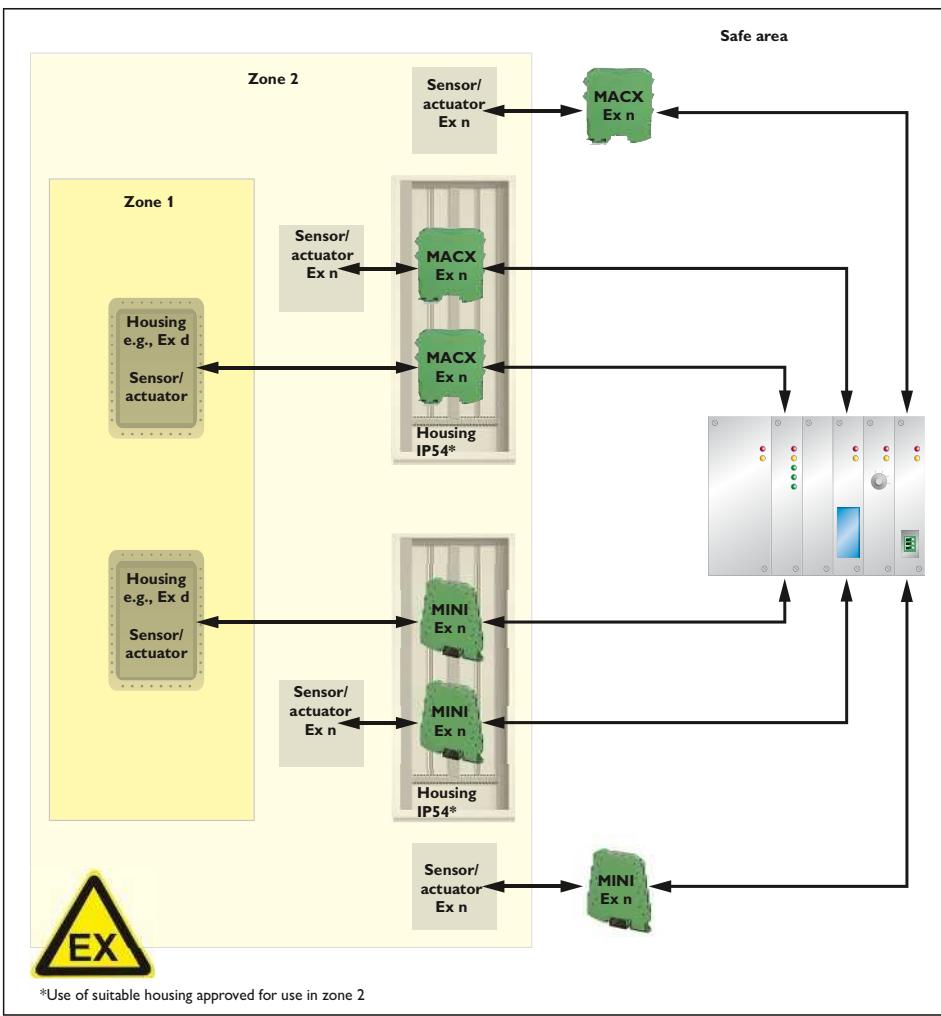

### Installation requirements

The figure shows a range of options for installing electrical devices in areas with a danger of gas explosions. Special requirements regarding the configuration, selection, and installation of electrical systems in areas with a danger of gas explosions can be found in EN 60079-14.

In the 2008 edition, the relevant contents of EN 61241-14 were incorporated in EN 60079-14.

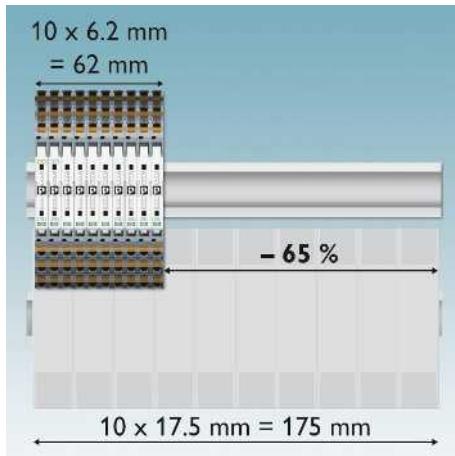

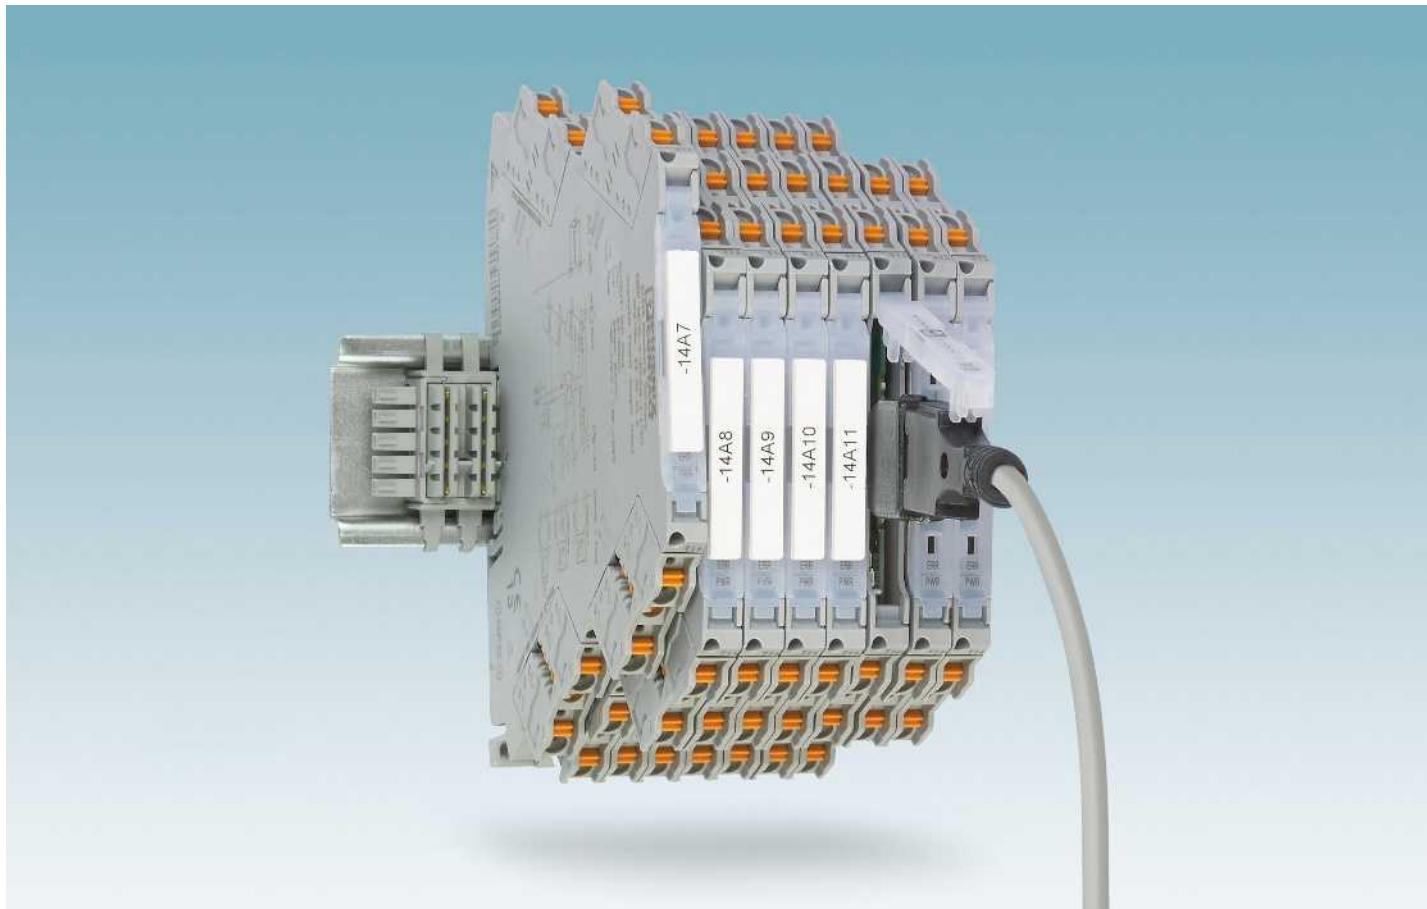

EN 61241-14 must still be observed when installing electrical equipment in areas containing combustible dust. Other important factors when it comes to running systems in potentially explosive areas are inspection, maintenance, and repairs. Stipulations regarding these matters can be found in EN 60079-17 and EN 60079-19.

### Installation of electrical devices for signal transmission

## MCR technology

Highly compact signal conditioners with plug-in connection technology - MINI Analog Pro

### Easier than ever but as slim as before

MINI Analog Pro offers you the easiest installation and startup in confined spaces.  
– Space savings of up to 65%

### Select from the following categories

- Analog IN/OUT
- Temperature
- Frequency
- Potentiometer
- Digital IN
- Threshold values
- Accessories

### Easy installation

- Easily visible and accessible terminal points and FASTCON Pro plug-in connection terminal blocks

### Power bridging and fault monitoring

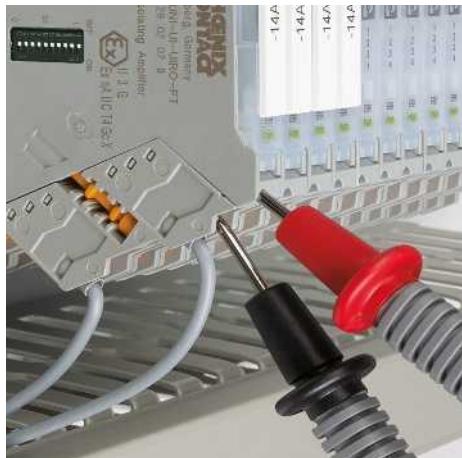

- The DIN rail connector simplifies supply and enables group error monitoring via remote diagnostics

DIN rail connector-compatible

The DIN rail connector enables the modular bridging of the 24 V supply voltage.

## Highly compact signal conditioners with plug-in connection technology - MINI Analog Pro

### Measure current signals during operation

Measure signals conveniently for startup and servicing during operation, thanks to integrated knife disconnect terminal blocks.

- The circuit does not have to be separated in order to integrate the measuring device in the signal circuit
- By setting the connector to the disconnect position, signal circuits can be easily interrupted during servicing and startup

### Numerous parameterization options

- Via DIP, PC or smartphone app

### Service-friendly

- Large-surface marking areas for complete loop identification using standard marking material as well as constantly visible status LEDs in every module

#### App functions via NFC communication

##### Access to information

- Access module information

##### DIP switch setting help

- Access module information
- Display DIP switch setting help on the smartphone

##### Configuration via NFC

- Access module information
- Display DIP switch setting help
- Wireless configuration via smartphone

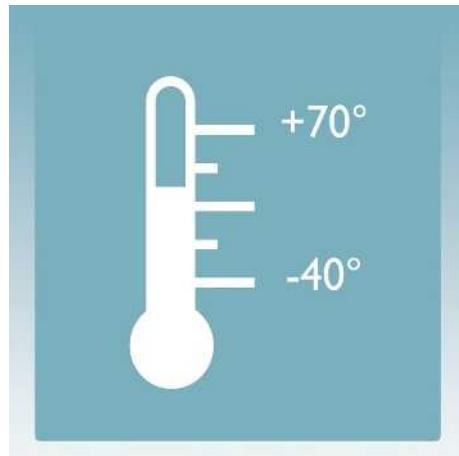

### Choice of connection technology

- Wiring with screw connection or fast and tool-free with push-in connection technology

### Optimum signal quality

- The latest transmission technology and safe electrical isolation between input, output, and supply with 3 kV test voltage

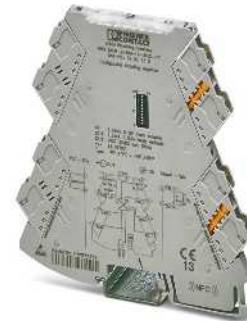

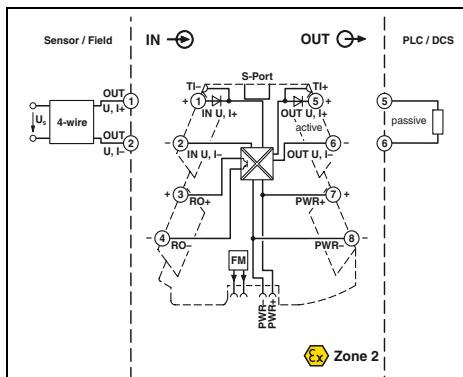

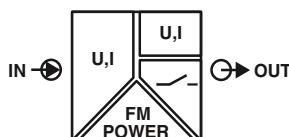

### Suitable for any application

- Extended supply voltage and temperature range as well as multifunctional device types.

## Highly compact signal conditioners with plug-in connection technology - MINI Analog Pro

### Analog IN/Analog OUT 4-way signal conditioner

Universal 4-way signal conditioner with switching output, configurable

Ex: Housing width 6.2 mm

## Highly compact signal conditioners with plug-in connection technology - MINI Analog Pro

### Analog IN/Analog OUT 2-way passive isolator, output loop-powered

new

Configurable,  
up to 74 signal combinations

- Highly compact passive isolator for electrical isolation and filtering of standard analog signals
- Safe 2-way isolation
- Supplied by an output loop
- Does not require any additional auxiliary voltage
- Up to 74 signal combinations can be configured using DIP switches
- Plug-in connection technology
- Voltage input from mV voltages up to 30 V
- Current input from 2 mA right up to 40 mA
- Status LED

#### Notes:

To order a product with an order configuration, please enter the desired configuration by referring to the order key.

Information on MINI Analog Pro accessories can be found from page 85

Housing width 6.2 mm

#### Technical data

Input data	U input	I input
Input signal (configurable using the DIP switch)	2 ... 10 V, additional ranges can be configured, see table	
Maximum input signal	< 30 V	< 40 mA (electric strength up to 30 V) ≤ 50 Ω
Input resistance	approx. 100 kΩ (at ≤ 1 V, otherwise approximately 1 MΩ)	
Output data	4 ... 20 mA	
Output signal	29 mA	
Maximum output signal	(U <sub>B</sub> = 8 V) / 22 mA	
Load R <sub>B</sub>	< 20 mV <sub>PP</sub> (at 600 Ω)	
Ripple		
General data	3 mA	
Current consumption	< 0.1 % (of final value)	
Maximum transmission error	0.01 %/K, typ. 0.005 %/K	
Temperature coefficient	approx. 30 Hz	
Cut-off frequency (3 dB)	15 ms	
Step response (10-90%)	Reinforced insulation in accordance with IEC 61010-1	
Electrical isolation	3 kV (50 Hz, 1 min.)	
Test voltage, input/output/supply	IP20	
Degree of protection	-40 °C ... 70 °C	
Ambient temperature (operation)	PBT	
Housing material	6.2 / 110.5 / 120.5 mm	
Dimensions W / H / D	0.14 ... 2.5 mm <sup>2</sup> / 0.14 ... 2.5 mm <sup>2</sup> / 24 - 12	
Push-in connection solid / stranded / AWG	0.2 ... 1.5 mm <sup>2</sup> / 0.2 ... 1.5 mm <sup>2</sup> / 24 - 12	
Screw connection solid / stranded / AWG		
Conformance / approvals	CE-compliant	
Conformance	Ex II 3 G Ex nA IIC T4 Gc X	
ATEX	UL applied for	
UL, USA / Canada	Class I, Div. 2, Groups A, B, C, D T5 applied for

## Highly compact signal conditioners with plug-in connection technology - MINI Analog Pro

### Temperature

#### Temperature transducer for thermocouples

**Universal temperature transducer  
for thermocouples**

Housing width 6.2 mm

### Technical data

- Universally configurable, highly compact temperature transducer for electrical isolation, conversion, amplification, and filtering of thermocouple signals
- For thermocouples according to IEC 584 and GOST
- Internal cold junction compensation
- Plug-in connection system
- Safe 3-way isolation
- Standard signal combinations configurable via DIP switches
- Freely configurable via software or smartphone app
- Power supply and fault monitoring possible via DIN rail connector
- Status and error indicator LEDs

#### Notes:

- The configuration software can be downloaded from the Internet: phoenixcontact.net/products.
- Information on the programming adapters can be found on page 89
- Information on MINI Analog Pro accessories can be found from page 85

### Digital IN Signal conditioner

new

Configurable,  
for NAMUR sensors and floating contacts

- Highly compact signal conditioner for electrical isolation, amplification, and duplication of proximity sensor signals
- For proximity sensors in accordance with IEC 60947-5-6 and EN 50227
- Floating contacts and contacts with resistance circuit can be connected
- Plug-in connection technology
- Input and output signals can be configured via DIP switches
- Transistor switching contacts on the output
- Second output can be used as a doubler or error signaling output
- Safe 3-way isolation
- Switchover between operating current and quiescent current (inverted switching behavior)
- Power supply and fault monitoring possible via DIN rail connector
- Status LEDs

## MCR technology

### Highly compact signal conditioners - MINI Analog

#### Extremely compact and efficient

The signal conditioners from the MINI Analog range offer the full spectrum of analog signal conditioning. They are therefore extremely efficient with regard to saving costs, space, and energy.

#### Choose the right MINI Analog signal conditioner for your application:

- Analog IN/OUT
- Temperature
- Frequency
- Potentiometer/resistor
- Digital IN
- Threshold values
- Accessories

#### Low power consumption

- The resulting minimal self-heating ensures long service life and a high degree of operational reliability

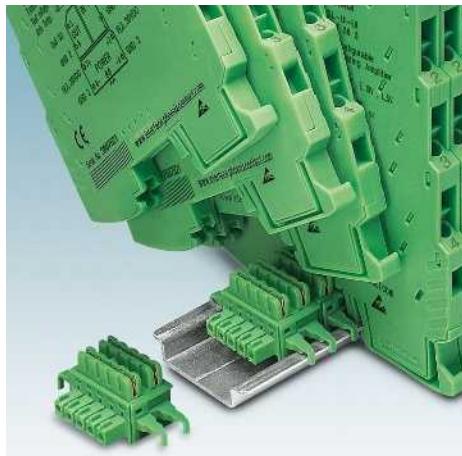

#### Clearly arranged wiring

- Eight connections with a choice of screw or spring-cage terminal blocks

DIN rail connector-compatible  
The DIN rail connector enables modular bridging of the 24 V supply voltage.

## Highly compact signal conditioners - MINI Analog

**Fault monitoring and power bridging**

- The DIN rail connector simplifies supply and enables group error monitoring

**High operational reliability**

- 3-way electrical isolation increases the operational reliability against system disturbances

**Easy configuration**

- Can be configured easily via DIP switches or software, for extended functionality and monitoring

**Reduction in analog inputs on controllers**

- The MINI Analog multiplexer reduces up to eight analog signals to a 4 ... 20 mA signal

**Time-saving system cabling**

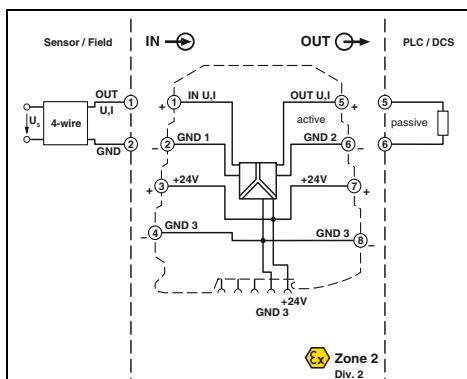

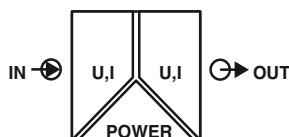

- Plug and Play – for eight channels on the signal conditioner and controller side

**Fast and error-free signal connection**

- Compact Termination Carriers connect MINI Analog devices to the automation systems – Plug and Play and hot-swap-capable

## Highly compact signal conditioners - MINI Analog

### Analog IN/Analog OUT 3-way signal conditioner

**Ex n**

Configurable,  
up to 36 signal combinations

Housing width 6.2 mm

#### Technical data

- Highly compact signal conditioner for electrical isolation, conversion, amplification, and filtering of standard analog signals
- Up to 36 signal combinations can be configured using DIP switches
- 3-way isolation
- Low power consumption
- Power supply possible through the foot element (DIN rail connector)
- Standard configuration:  
0 ... 10 V input, 0 ... 20 mA output

#### Notes:

To order a product with an order configuration, enter the required configuration by referring to the adjacent order key.

Information about power bridging, system cabling, and marking components can be found from page 116

## Highly compact signal conditioners - MINI Analog

### Analog IN/Analog OUT 3-way signal conditioner

**Configurable, for shunt measurements**

Ex n  
Housing width 6.2 mm

### Technical data

- Highly compact signal conditioner for electrical isolation, conversion, amplification, and filtering of mV signals to create standard analog signals
- Ideal for converting signals in the case of shunt measurements
- Up to 280 signal combinations can be configured using DIP switches
- 3-way isolation
- Low power consumption
- Power supply possible through the foot element (DIN rail connector)
- Standard configuration:  
0 ... 50 mV input, 0 ... 20 mA output

Notes:	
To order a product with an order configuration, enter the required configuration by referring to the adjacent order key.	
Information about power bridging, system cabling, and marking components can be found from page 116

## Highly compact signal conditioners - MINI Analog

### Temperature

#### Temperature transducer for Pt 100

Configurable, for a temperature measuring range of -50°C ... +200°C

Housing width 6.2 mm

#### Technical data

- Highly compact temperature transducer for electrical isolation, conversion, amplification, and filtering of Pt 100 signals to create standard signals
- Optimized temperature measuring range of -50°C to +200°C for increased accuracy
- For 2, 3 or 4-wire Pt 100 sensors according to IEC 60751
- Input and output signals can be configured via DIP switches
- 3-way isolation
- Error signaling via diagnostics LED and analog signal
- Power supply possible through the foot element (DIN rail connector)

## Temperature transducer for Pt 100

Configurable, for a temperature measuring range of  $-150^{\circ}\text{C} \dots +850^{\circ}\text{C}$

Housing width 6.2 mm

D

W

H

## Technical data

- Highly compact temperature transducer for electrical isolation, conversion, amplification, and filtering of Pt 100 signals to create standard signals
- Temperature measuring range of  $-150^{\circ}\text{C}$  to  $+850^{\circ}\text{C}$
- For 2, 3 or 4-wire Pt 100 sensors according to IEC 60751
- Input and output signals can be configured via DIP switches
- 3-way isolation
- Error signaling via diagnostics LED and analog signal
- Power supply possible through the foot element (DIN rail connector)

## Notes:

To order a product with an order configuration, please enter the desired configuration by referring to the order key; see below.

Information about power bridging, system cabling, and marking components can be found from page 116

### Temperature

#### Temperature transducer for Pt 100

**Configurable,  
for temperature measuring range -150 ... 300°C,  
output loop-powered**

Housing width 6.2 mm

### Technical data

- Highly compact output loop-powered temperature transducer for electrical isolation, conversion, amplification, and filtering of Pt 100 signals to create standard signals
- Supplied by an output loop
- Does not require any additional auxiliary voltage
- Temperature measuring range of -150°C to +300°C
- 2, 3 or 4-wire Pt 100 sensors
- Input signals can be configured via DIP switches
- 2-way isolation
- Error signaling via diagnostics LED and analog signal

D  
W  
H

Frequency transducer for up to 80 kHz

Configurable 3-way isolated frequency transducer.

- Suitable for the connection of NAMUR proximity sensors (IEC 60947-5-6 and EN 50227) as well as for sensors with NPN and PNP outputs that generate a frequency signal
- The device is configured via DIP switches
- Frequency range is freely adjustable via a press/slide button (“teach-in wheel”)
- Supports fault monitoring
- Standard configuration:  
NAMUR sensor; mean-value generation “OFF”; 0.002 Hz ... 20 kHz frequency range; 4 ... 20 mA output; error evaluation NE43 (downscale); fault monitoring contact responds on any error

MCR NAMUR signal conditioner	Screw connection	MINI MCR-SL-NAM-2RNO	2864105
	Spring-cage connection	MINI MCR-SL-NAM-2RNO-SP	2810269

- Highly compact signal conditioner for electrical isolation, amplification, and duplication of proximity sensor signals
- For proximity sensors in accordance with IEC 60947-5-6 and EN 50227
- Floating contacts and contacts with resistance circuit can be connected
- Input and output signals can be configured via DIP switches
- N/O contacts at output
- Second output can be used as a doubler or error signaling output
- 3-way isolation
- Switchover between operating current and quiescent current (inverted switching behavior)
- Error signaling via diagnostics LED and analog signal
- Power supply possible through the foot element (DIN rail connector)

## Highly compact signal conditioners - MINI Analog

### Accessories

#### System cabling

A high number of channels enables analog signal transmission across 6 mm in a confined space for many applications. In this kind of context, in particular, it is really important to have access to wiring solutions that avoid errors and are time-efficient, thereby cutting costs.

The MINI Analog system cabling solution allows you to wire up to eight channels quickly, easily, and without errors.

System cabling can take various forms.

#### System cabling with a front adapter

This includes:

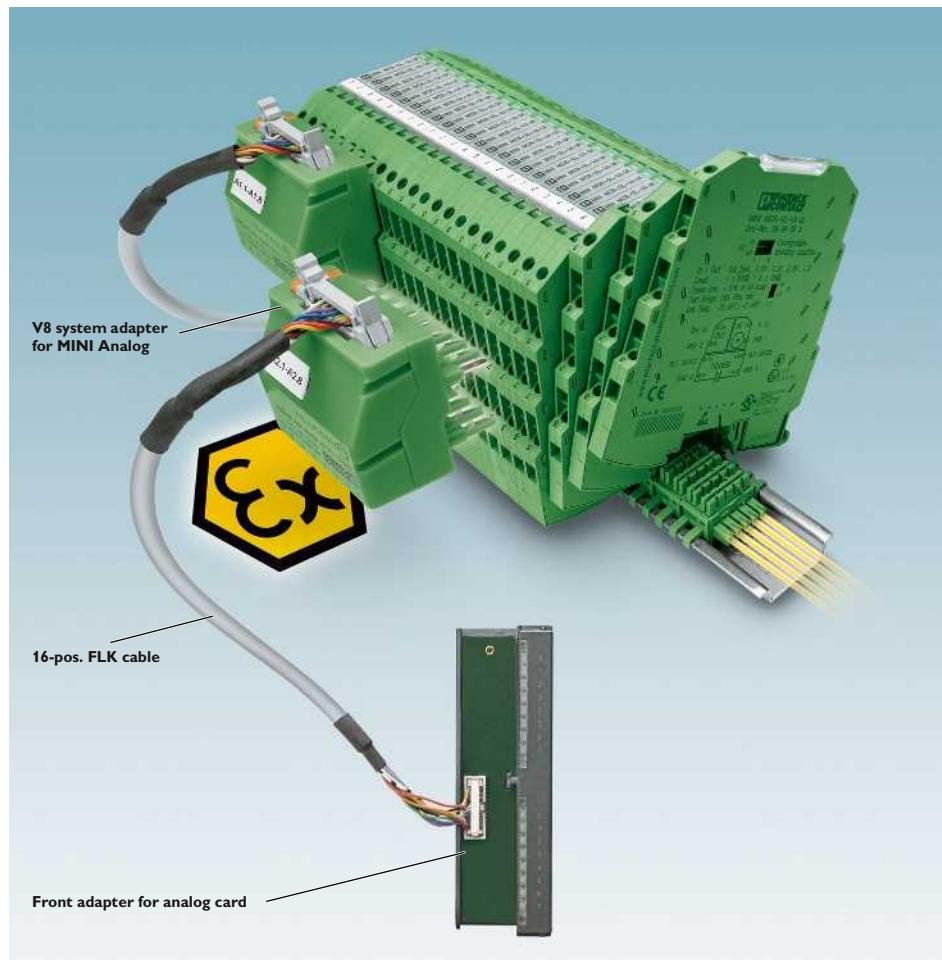

- A 16-pos. FLK cable
- The V8 system adapter for MINI Analog modules
- A front adapter that needs to be specifically selected based on the analog card of the controller

With this solution, all you need to do is connect the components together. There is virtually no wiring effort involved. What's more, it completely rules out wiring errors, as the pre-assembled components ensure correct assignment by virtue of their design.

#### System cabling without a front adapter

The version that does not require the use of a front adapter is the ideal addition.

This solution involves using a 16-pos. FLK cable with open ends on one side. The open ends are fitted with ferrules and are numbered. This allows you to create a system cabling connection to virtually any module without having to fit a front adapter. The other advantage is that you can implement system cabling on the module side quickly, easily, and without errors.

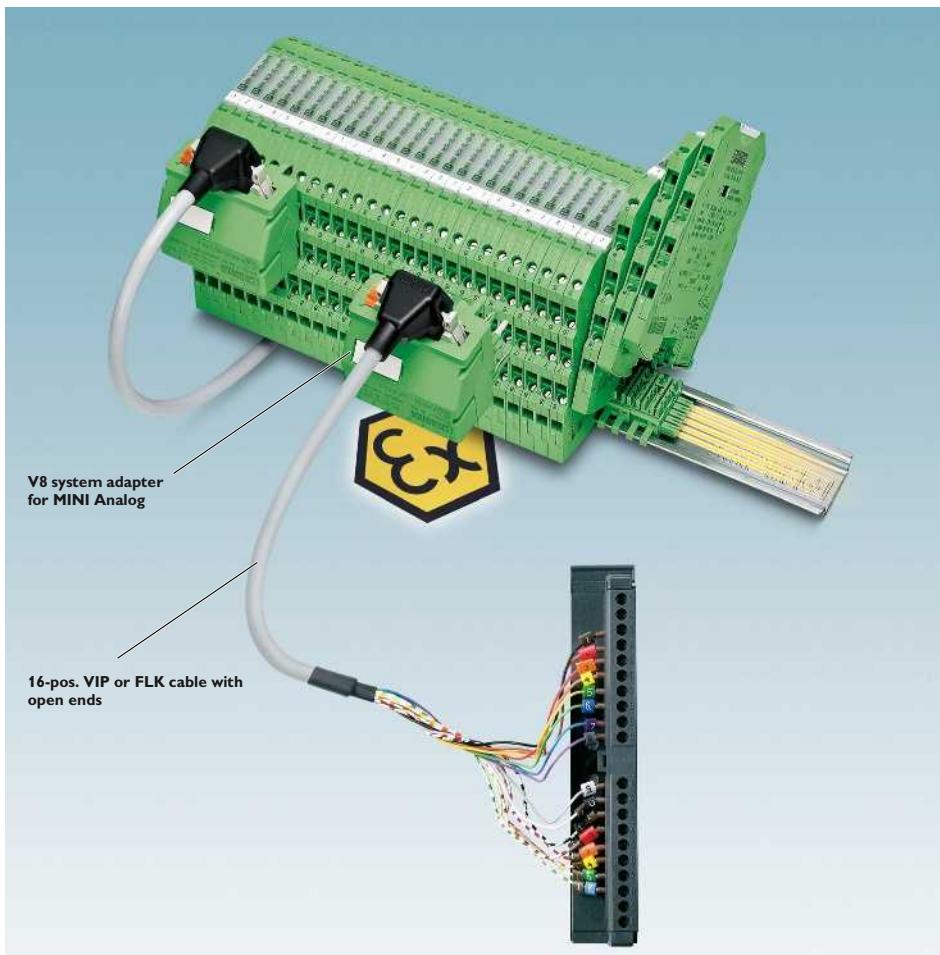

System cabling with a front adapter

The tables below are designed to serve as a configuration aid. Details of other solutions are available on the Internet or on request.

#### Configuration aid for MINI Analog system cabling

### Innovative concept

Thanks to its innovative design concept, the MINI MCR-SL-V8-FLK 16 A MINI Analog system adapter can be used on both the input and output side. Consequently, there is nothing at all to prevent you from using the same components for system cabling on both output and input modules.

### Complete flexibility

The proven FLK cable series offers complete flexibility in terms of selection and is the ideal solution for system cabling with a front adapter. The flat and flexible plug connections mean that the products can be easily installed in any analog module.

### Increased protection

The new VIP cables with molded FLK plugs offer enhanced protection in harsh industrial environments. If you opt for system cabling without a front adapter, you can enjoy all the advantages of the new VIP cables on the system adapter side.

### Addition

If the application demands a form of system cabling with fewer than eight channels, the MINI MCR-SL-TB feed-through terminal block (page 116) represents the perfect addition.

## Highly compact signal conditioners - MINI Analog

## Accessories, MINI Analog multiplexer

- Generates an analog output from up to eight analog input signals – parallel analog signals are transmitted serially via a cable
- The desired number of channels is selected via DIP switches (8, 6, 4 or 2 channels).
- The channel currently switched is indicated as a bit pattern via three digital outputs
- Two clock cycles for execution can be selected via DIP switches (one or two-second clock)
- Supplied by an output loop
- For 4 ... 20 mA current signals
- Can be easily snapped onto MINI Analog modules with screw connection technology
- Huge reduction in analog inputs at controllers
- System cabling on the output side using pre-assembled FLK cables with open ends.

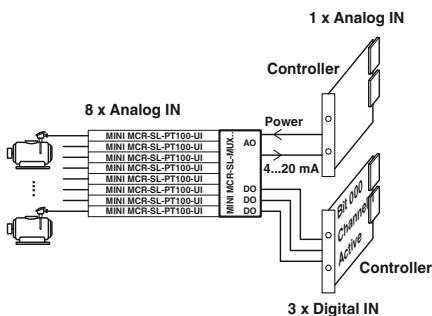

### Notes:

For six, four or two channels you will also need the corresponding number of feed-through terminal blocks (i.e., two, four or six).

## Highly compact signal conditioners - MINI Analog

### Termination Carriers for MINI Analog signal conditioners

**TC... Termination Carriers** are compact solutions for conveniently and smoothly connecting standard DIN rail signal conditioners from the MINI Analog series to input/output cards of automation systems using system cables.

The most compact signal conditioners combined with the most compact and flexible module carriers on the market enable you to achieve a hitherto unparalleled packing density in your control cabinet together with professional system cabling.

#### Compact

- The compact design associated with MINI Analog saves up to 65% of space in the control cabinet

#### Robust and reliable

- Stable, vibration-resistant aluminum carrier device profile
- PCB is completely decoupled from signal conditioners
- PCB without active electronics
- Redundant supply via separate DIN rail module
- Horizontal or vertical DIN rail mounting

#### Flexible

- Profile sections without pitch markings
- Quick and safe module connection with plug-in cable sets
- Horizontal or vertical DIN rail mounting
- Can be flexibly adapted to suit any controller or higher-level control system
- Solutions tailored to your requirements on request
- Available pre-assembled with modules and wired, or for self-assembly

Select standard DIN rail device

Select module carrier

Select controller-specific front adapter and system cable

Solutions are also available for MACX Analog, MACX Analog Ex, and Safety

## Termination Carriers for MINI Analog signal conditioners

### The TC-D37SUB-ADIO16-M-P-UNI

universal Termination Carrier is a compact solution which connects signal conditioners from the MINI Analog series to analog or binary input/output cards of automation systems.

- In conjunction with the MACX MCR-S-MUX HART multiplexer, the **TC-D37SUB-AIO16-M-PS-UNI** Termination Carrier version also allows communication between HART-capable field devices and a management system.
- Connection of up to 16 single-channel signal conditioners
  - Universal 1:1 signal routing to a 37-pos. D-SUB connector
  - For system cables with D-SUB socket and open ends for universal connection
  - Redundant supply and monitoring via separate MINI MCR-SL-PTB-FM power terminal and MINI MCR-SL-FM-RC-NC fault signaling module

#### Notes:

Contact us: together, we can develop optimum solutions for your automation system with the Termination Carrier for MINI Analog.

TC-D37SUB-ADIO16-M-P-UNI (Order No. 2902933) is not a class A product.

Ex:   
Housing width 136 mm

#### Technical data

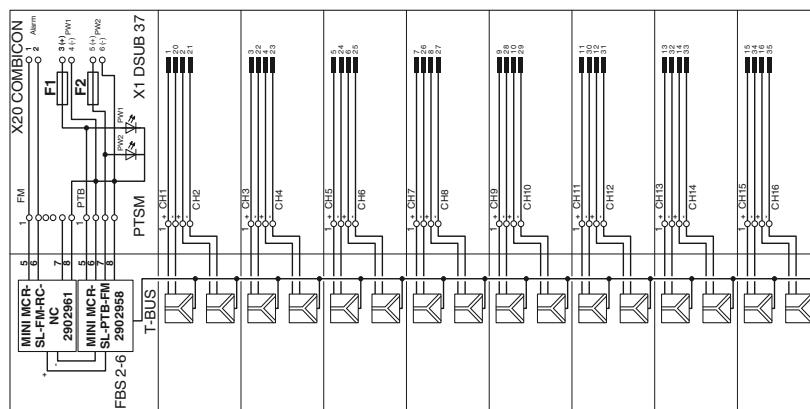

General data	D-SUB pin strip
Connection to the control system level	37
Number of positions	< 50 V DC (per signal/channel)
Max. operating voltage	23 mA (signal/channel)
Max. permissible current	50 V
Rated insulation voltage	2
Pollution degree	II
Surge voltage category	0.5 kV
Rated surge voltage	DIN EN 50178 (basic insulation)
Clearance and creepage distances	-20 °C ... 60 °C (please observe module specifications)
Ambient temperature range	
Shock	15g, according to IEC 60068-2-27
Vibration (operation)	2g, according to IEC 60068-2-6
Dimensions W / H / D	136 / 170 / 160 mm
EMC note	Class A product, see page 625
Power supply via power module	19.2 V DC ... 30 V DC
Input voltage range	yes, decoupled from diodes
Redundant supply	Yes
Polarization and surge protection	2x 2.5 A on PCB, slow-blow (replaceable)
Fuse	
Status indication	2 x red LED (error) 2x green LEDs (PWR1 and PWR2)
Switching output	1 N/C contact (alarm = open)

## Highly compact signal conditioners - MINI Analog

### Accessories

#### Surge protection

##### LINETRAB LIT

The ideal addition to MINI Analog - the innovative surge protection solution in 6.2 mm housing.

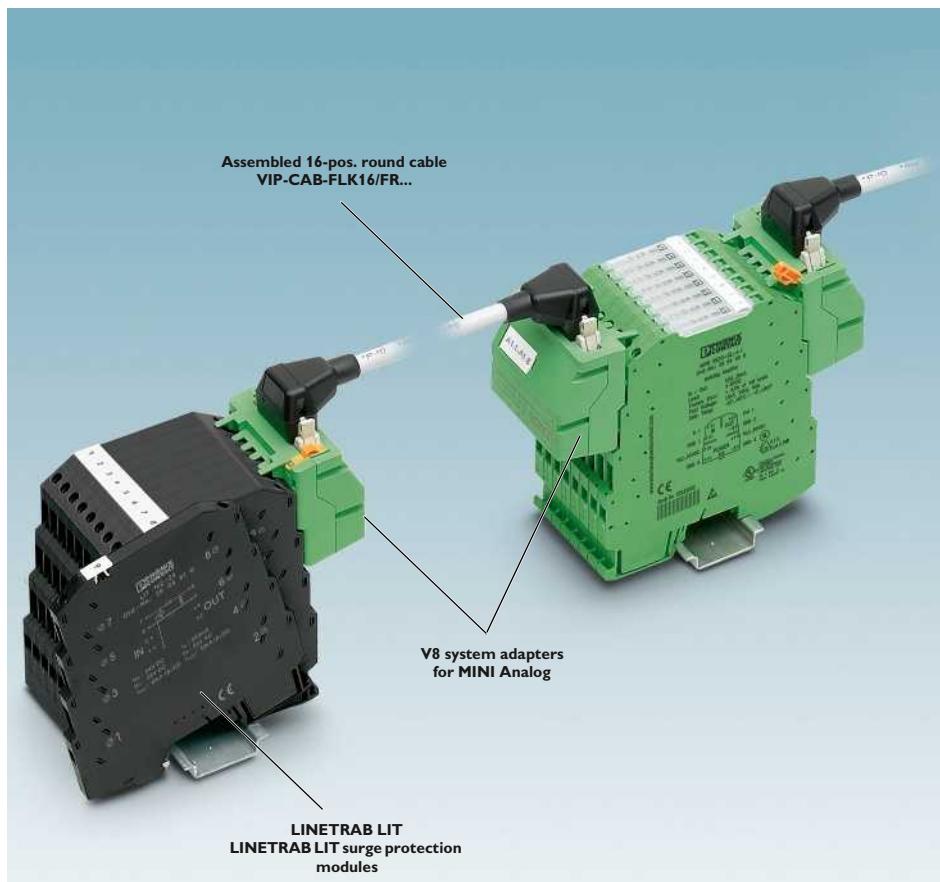

Since the LINETRAB LIT and MINI Analog housing is the same shape, you can benefit from the numerous advantages of system cabling. The advantage of combining MINI Analog and LINETRAB LIT products is that it enables you to set up a space-saving, protected, and optimally coordinated signal chain from the sensor right up to the controller.

The tables below are designed to serve as configuration aids for combining MINI Analog and LINETRAB products.

On the left, you will find a list of the components and combination options for setting up system cabling between MINI Analog and LINETRAB.

For details of system cabling solutions that can be used between MINI Analog and the controller side, please refer to page 120.

For more detailed information on LINETRAB LIT surge protection modules, please see the TRABTECH catalog.

Reliable and systematic measurements - LINETRAB LIT and MINI Analog

#### Components required for system cabling

Available 16-pos. VIP... round cables			V8 system adapter for MINI Analog
Type	Length	Order No.	Type
VIP-CAB-FLK16/FR/FR/0,14/0,5M	0.5 m	2900154	2 x MINI MCR-SL-V8-FLK 16-A (in the catalog on page 122)
VIP-CAB-FLK16/FR/FR/0,14/1,0M	1.0 m	2900155	
VIP-CAB-FLK16/FR/FR/0,14/2,0M	2.0 m	2900156	

VIP... round cables are available in special lengths on request.

**VIP system cable**

The new VIP cables provide a way of setting up secure and robust connections, even in harsh industrial environments.

**Innovative concept**

The MINI Analog system adapter does not just support system cabling on the input and output sides. It also allows cabling to be installed with LINETRAB surge protection modules quickly, easily, and without errors.

**Increased protection**

In addition to all the advantages associated with electrical isolation, filtering, amplification, and the conversion of standard analog signals using MINI Analog, there is now also the option of effective surge protection.

**Surge protection**

Surge protection is a reliable means of actively preventing and protecting against system damage and downtimes. LINETRAB is able to limit transient surge voltages safely and without affecting the signal - all in a compact device with an overall width of just 6.2 mm.

### MCR signal conditioners, head transducers, and process indicators

The MCR signal conditioners in conjunction with proven DIN rail housings and plug-in connection technology offer you a large number of input signal types which can be converted to standard signals.

When using off the DIN rail, you can display or specify your process values with the process indicators and the head transducers convert your temperature values directly into a standard signal.

Choose the right MCR Analog signal conditioner for your application:

### Analog IN/Analog OUT

- Configurable signal multipliers to double standard analog signals

### Temperature

- Temperature relay for 2-wire Pt100
- Output loop-powered temperature transducer for thermocouples and resistance thermometers
- Head transducers for thermocouples and resistance thermometers

### Frequency

- Programmable frequency transducer for frequencies up to 120 kHz

### Limit values

- Universal threshold value switch for temperature sensors and standard signals

### Process indicators

- Programmable process indicators for standard signals
- Setpoint adjuster

### Accessories

- Setpoint potentiometers

### Your advantages:

- High operational reliability in the event of disturbances, thanks to electrical isolation
- Configuration via software, DIP switches or display keypad
- Process indicators including mounting accessories and IP65 protection
- Clearly legible LED 7-segment display

- High operational reliability in the event of disturbances, thanks to electrical isolation

- Configuration via software, DIP switches or display keypad

- Process indicators including mounting accessories and IP65 protection
- Convenient reading of process indicators thanks to LED 7-segment display
- Process indicator programming without software

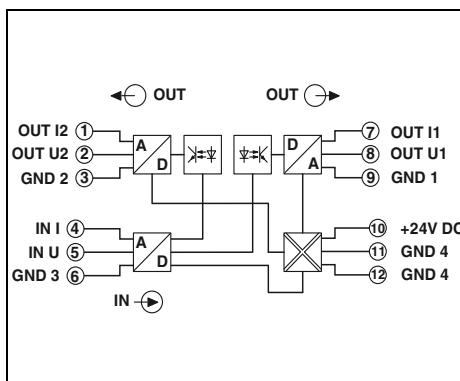

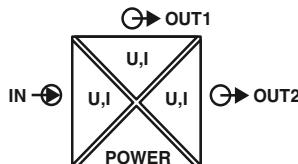

- Convert temperature signals directly into standard analog signals with temperature head transmitters

Ex.

- Output loop-powered temperature head transmitter for Pt 100 sensors
- Freely configurable
- Software available free of charge on the Internet
- For mounting in the connecting head, form B

### Notes:

The devices are supplied with the standard configuration:  
Pt 100 sensor, measuring range 0 ... 100°C, 3-wire connection.

The configuration software can be downloaded from the Internet:  
[phoenixcontact.net/products](http://phoenixcontact.net/products).

### Input data

Resistance thermometers

Pt 100; minimum measuring range 10 K : 2, 3, 4-wire

### Output data

Output signal  
Load  $R_B$

4 ... 20 mA / 20 ... 4 mA  
Max ( $V_{\text{supply}} - 10 \text{ V}$ ) / 0.023 A (current output)

### Output signal with short-circuit

Output signal with open circuit  
Measuring range overrange / underrange

$\leq 3.6 \text{ mA}$  or  $\geq 21 \text{ mA}$  (adjustable)  
 $\leq 3.6 \text{ mA}$  or  $\geq 21 \text{ mA}$  (adjustable)  
 $\leq 20.5 \text{ mA} / \geq 3.8 \text{ mA}$  (linear increase/decrease)

### General data

Supply voltage  $U_B$

10 V DC ... 35 V DC

Current consumption

< 3.5 mA

Transmission error

0.2 K

Step response (10-90%)

< 2 s

Pickup delay

4 s

Degree of protection

IP00, IP54 (integrated in the connecting head)

Ambient temperature (operation)

-40 °C ... 85 °C

Mounting

any

Housing material

Polycarbonate, PC

### Conformance / approvals

Conformance

CE-compliant

UL, USA / Canada

Class I, Div. 2, Groups A, B, C, D

## Signal conditioners, head transducers, and process indicators - MCR Analog

### Frequency, frequency transducer

Frequencies up to 120 kHz,  
configurable

Ex:

Housing width 45 mm

### Technical data

- Frequencies up to 120 kHz
- For NAMUR sensors, floating contacts, frequency generators, and NPN/PNP transistor outputs
- Analog and switching output
- 3-way isolation
- Configurable via membrane keypad or software
- Software available free of charge on the Internet
- Display of input or output signal

#### Notes:

The configuration software can be downloaded from the Internet:  
[phoenixcontact.net/products](http://phoenixcontact.net/products).

## Signal conditioners, head transducers, and process indicators - MCR Analog

## Example connections for common frequency transmitters

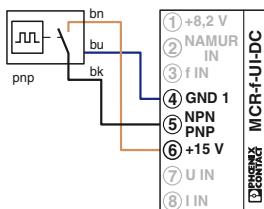

2-wire DC (mechanical contact)

Alternatively instead of terminal block ⑥ terminal block ① possible.

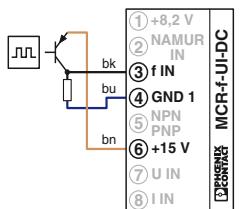

3-wire DC

- With PNP transistor output

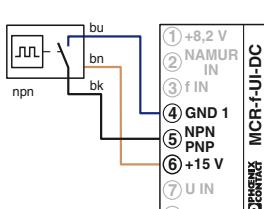

3-wire DC

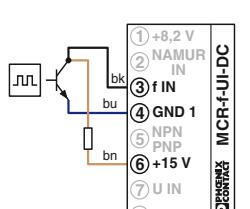

- With PNP transistor with pull-down resistor

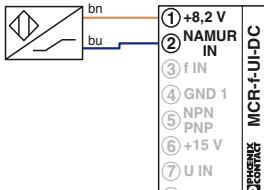

- With NPN transistor output

- NPN transistor with pull-up resistor

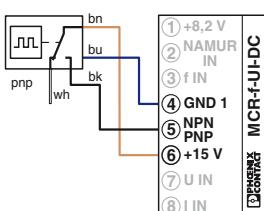

2-wire DC NAMUR sensor

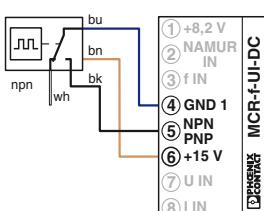

4-wire DC

- With PNP transistor output

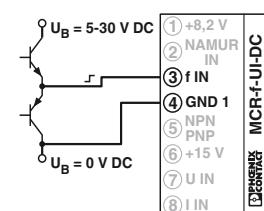

- With NPN transistor output

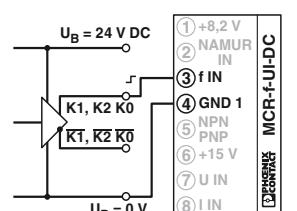

Incremental rotary transducer with push-pull:

- External supply of signal generator

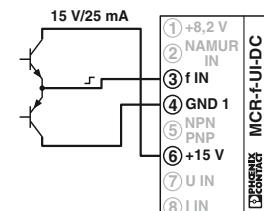

Incremental rotary transducer with HTL logic:

- External supply of signal generator

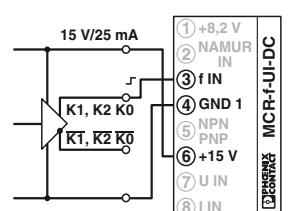

- Supply of signal generator from the module

The external supply can also be tapped from terminal blocks ⑨ +24VDC and ⑩ GND. 3-way isolation is then no longer provided.

- Supply of signal generator from the module

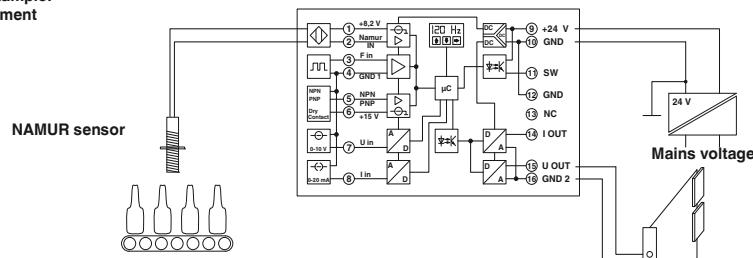

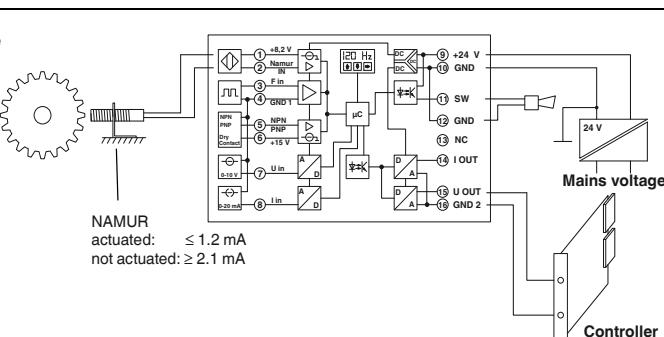

## Application examples:

The **MCR-F-UI-DC** frequency transducer converts the pulse signal into a standard analog signal, which, for example, corresponds to the number of bottles filling systems recorded during a specified time unit.

For speed detection, it is possible to enter the measuring range in revolutions per minute (RPM) and display the current measured value on the unit.

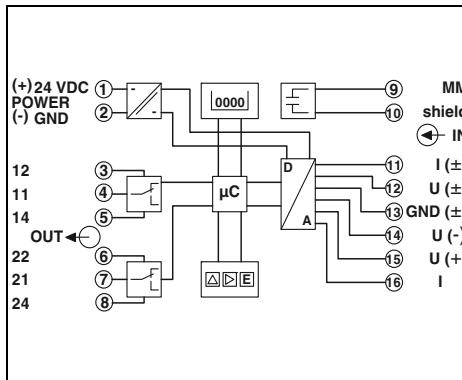

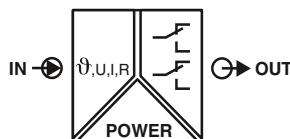

The frequency transducer has an automatic measuring range selection function (autorange) to ensure the best possible resolution. This permits response times to be reduced to a minimum and the measured value is optimally adapted to the input value.

Application example:  
Flow measurementApplication example:  
Speed detection of a drive

## Signal conditioners with functional safety and explosion protection - the MACX ranges

**Reliable and safe**

Maximum safety for your machines and systems.

Phoenix Contact meets the requirements of functional safety according to IEC 61508 in a standardized development process. We take measures for fault avoidance and fault control into consideration, from the development and production of a device up to device operation.

**Tested quality and safety**

Independent test centers are involved throughout the entire development cycle and audit the measures as part of a full assessment. The certificates, technical information, and the safety manual are available for you to download.

**A solution for every type of signal**

Safely isolate, condition, filter, and amplify: MACX Analog offers comprehensive solutions for analog signal processing.

**Analog signals with performance level**

MACX Safety is also equipped with performance level PL d. This means that you can integrate analog signals easily into your safety application according to the Machinery Directive.

**Maximum explosion protection**

Highly compact and leading technology: with an overall width of just 12.5 mm, MACX Analog Ex offers single and two-channel signal isolators for intrinsically safe circuits in the hazardous area.

**Analog Ex i signals with performance level**

Also for intrinsically safe circuits in the hazardous area: in addition to PL d, MACX Safety Ex also has ATEX and IECEx approvals.

## Signal conditioners with functional safety and explosion protection - the MACX ranges

### Facts about explosion protection

The chemical and petrochemical industries involve industrial processes which produce explosive atmospheres. They are caused, for example, by gases, fumes or vapors. Explosive atmospheres are also likely to occur in mills, silos, and sugar and fodder factories due to the dust present there.

Therefore, electrical devices in potentially explosive areas are subject to special directives.

### Devices and protective systems in potentially explosive areas

European Parliament directive 94/9/EC of March 23, 1994 (ATEX manufacturer directive) is of particular importance within CENELEC (European Community and Western European EFTA states). It is designed to facilitate the harmonization of legal provisions in the member states of the European Union for devices and protective systems in terms of ensuring correct use in potentially explosive areas. Directive 94/9/EC must be applied to all explosion-protected devices and protective systems placed on the market in the European Union.

The scope of this directive also includes safety, monitoring, and control devices which are used outside of potentially explosive areas, but which are necessary for, or contribute towards, the safe operation of devices and protective systems with respect to explosion hazards.

The term **device** includes machines, equipment, stationary or mobile devices, control components, and system accessories. The directive also covers alarm and protection systems which are meant to be used, either individually or in combination, for the generation, transmission, storage, measurement, control, and conversion of energy as well as for processing materials and which have the potential to ignite and cause an explosion.

**Protective systems** are devices designed to stop an incipient explosion immediately and/or restrict the area affected by the explosion, and which are placed on the market separately as autonomous systems.

**Components** are defined as those parts that are necessary for ensuring the safe operation of devices and protective systems, but do not perform an autonomous function in themselves.

European directives are implemented in ordinances or laws at a national level.

### Systems in potentially explosive areas

Directive 1999/92/EC (ATEX Operator Directive) was passed in Europe to regulate the operation of systems in potentially explosive areas.

#### Terminology associated with the Ex area

##### Explosive atmosphere

A mixture of combustible gases, steam, vapors or dust and air in atmospheric conditions that allow the entire mixture to combust once ignited.

##### Potentially explosive area

An area where the atmosphere has the potential to explode due to local or operational conditions ("Ex area").

##### Electrical equipment

The entire set of components, electric circuits or parts of electric circuits that are usually located within a single housing.

##### Intrinsically safe electrical equipment

An electrical device in which all circuits are intrinsically safe.

Note: these devices may be used directly in the Ex area.

##### Associated equipment

Electrical devices that contain both intrinsically safe and non-intrinsically safe circuits and that are designed in such a way that the non-intrinsically safe circuits cannot influence the intrinsically safe ones. Note: associated electrical equipment must not be used directly in potentially explosive areas without additional protection defined by a further protection type.

### Classification into groups

The general stipulations of EN 60079-0 divide electrical devices for potentially explosive areas into three groups.

#### Group I:

Electrical devices for firedamp areas (mines) which are susceptible to pit gases (methane) and/or combustible dusts (coal dust).

#### Group II:

Electrical devices for operation in areas where explosive gas atmospheres are likely to occur, excluding mines susceptible to firedamp.

This also includes devices for the chemical, petrochemical, and pharmaceutical industries as well as for wastewater treatment.

Electrical devices are further divided into subcategories according to the properties of the explosive atmosphere.

In the case of the intrinsic safety protection type, classification is based on the minimum ignition energy of the gas or vapor.

Designation	Typical gas	Ignition energy/ $\mu\text{J}$ Intrinsic safety
II A	Propane	> 180
II B	Ethylene	60 ... 180
II C	Hydrogen	< 60

#### Group III:

Electrical devices for operation in areas where explosive dust atmospheres are likely to occur, excluding mines susceptible to firedamp.

This includes devices for areas associated with the food industry (mills, silos), for example.

Electrical devices are further divided into subcategories according to the properties of the explosive atmosphere.

Designation	Dusts
III A	Combustible flyings
III B	Non-conductive dust
III C	Conductive dust

## Signal conditioners with functional safety and explosion protection - the MACX ranges

## Classification into temperature classes

Simply dividing the various gases into explosion or gas groups according to their minimum ignition energy is not sufficient to describe the gases adequately with regard to their explosive properties.

A gas may explode either when the ignition energy is exceeded or where there is an excessively high temperature caused by a hot surface. This ignition temperature is, however, not usually linked to the ignition energy, i.e., a gas with a low ignition energy does not necessarily explode at a low temperature. Consequently, devices that are used directly in potentially explosive atmospheres are divided into temperature classes. Temperature classes define the maximum surface temperature even in the event of errors. Parallel to this, the gases are classified according to their different ignition temperatures.

Temperature class	Maximum permissible surface temperature of equipment °C	Ignition temperatures of combustible substances °C
T 1	450	> 450
T 2	300	> 300 ≤ 450
T 3	200	> 200 ≤ 300
T 4	135	> 135 ≤ 200
T 5	100	> 100 ≤ 135
T 6	85	> 85 ≤ 100

The following table provides an overview of the ignition energies and ignition temperatures for certain gases:

Substance	T <sub>ign</sub>	Tempera-ture class	E <sub>min</sub>	Group
Ethoxyethane	170	T 4	190	II B
Ethylene	425	T 2	82	II B
Ammonia	630	T 1	14000	II A
Butane	365	T 2	250	II A
Methane	595	T 1	280	I
Propane	470	T 1	250	II A
Carbon disulfide	95	T 6	9	II C
Hydrogen	560	T 1	16	II C

## Zone classification

Potentially explosive areas are divided into zones according to the probability of their occurrence. The EN 60079-10-1 standard defines the zones containing **explosive atmospheres** as follows:

**Zone 0:**

Area in which an explosive atmosphere is present for continuous or long periods.

These conditions are usually present inside containers, pipelines, apparatus, and tanks.

**Zone 1:**

Area in which an explosive atmosphere is to be expected only occasionally during normal operation.

This includes the immediate area surrounding zone 0, as well as areas close to filling and emptying equipment.

**Zone 2:**

Area in which an explosive atmosphere is not expected during normal operation; however, if it does occur, then it does so only rarely and for a short period.

Zone 2 includes areas that are used exclusively for storage, areas around pipe connections that can be disconnected, and generally the immediate area surrounding zone 1.

Areas that are potentially explosive as a result of **combustible dusts** are divided into the following zones according to EN 60079-10-2 (formerly: EN 61241-10):

**Zone 20:**

Area in which an explosive atmosphere is present for continuous, frequent or long periods in the form of an airborne cloud of combustible dust.

**Zone 21:**

Area in which an explosive atmosphere in the form of an airborne cloud of combustible dust is to be expected only occasionally during normal operation.

**Zone 22:**

Area in which an explosive atmosphere in the form of an airborne cloud of combustible dust is not expected during normal operation. However, if it does occur, then it does so only for a short period.

## Categories

The ATEX Directive assigns devices for use in potentially explosive areas to categories. In IEC 60079-0, "Equipment Protection Level (EPL)" is the term used instead of "category".

In the same way that there are different zones, there are also different device categories. These consist of categories M1 and M2 for Group I and categories 1, 2, and 3 for Group II. The categories for **equipment group II** are described in more detail below:

**Category 1:**

Devices constructed to guarantee a very high degree of safety.

Devices in this category must guarantee the required degree of safety even in the unlikely event of a device failure and therefore be provided with measures to protect against explosion, so that:

- In the event of one integrated protection measure failing, a second, independent protection measure is able to guarantee the necessary safety.
- In the event of two independent errors, the necessary safety is guaranteed.

**Category 2:**

Devices constructed to guarantee a very high degree of safety.

The explosion protection measures associated with this category guarantee the required degree of safety, even in the case of frequent device failures or common error states.

**Category 3:**

Devices constructed to guarantee a standard degree of safety.

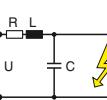

Devices in this category guarantee an adequate degree of safety in normal operation.

The table below shows which categories are assigned to which zones:

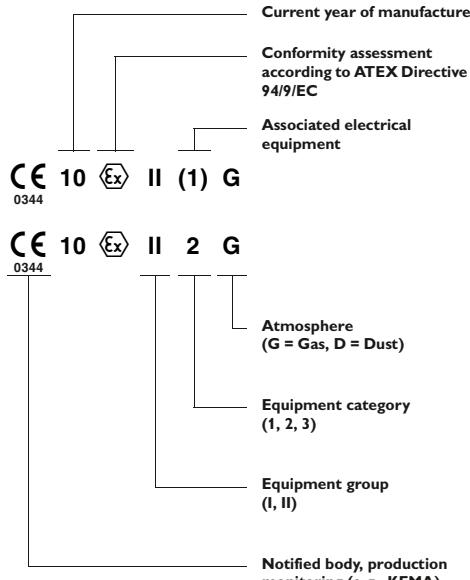

Category	For zone	Also possible
1	0 20	1 and 2 21 and 22
2	1 21	2 22
3	2 22	

## Signal conditioners with functional safety and explosion protection - the MACX ranges

### Protection types

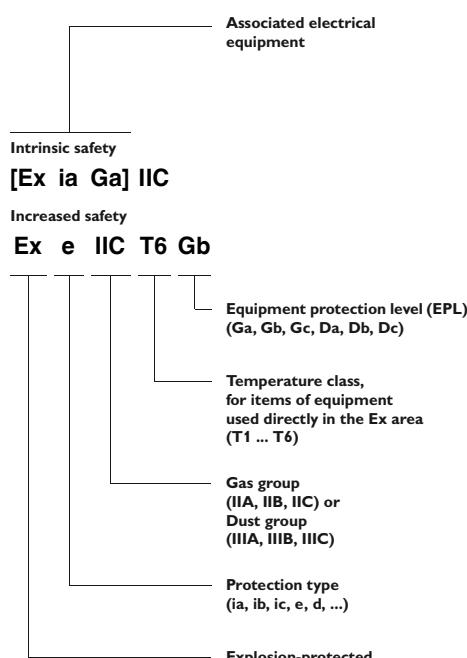

Protection principle	Protection type	Usage range (selection)	Standard
 <b>Isolation</b>	Oil immersion	o q m*	Transformers, relays, startup controls, switching devices

* ia, ma: application in zone 0, 1, 2 / ib, mb: application in zone 1, 2 / ic, mc: application in zone 2 only    ** Application in zone 2 only			

### Marking according to ATEX Directive

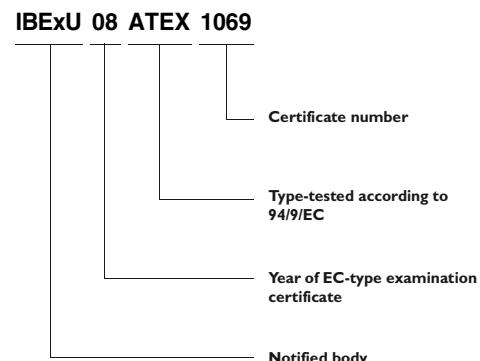

CE mark does not apply to components.

### Designation according to EN 60079-0

### EC-type examination certificate

## Signal conditioners with functional safety and explosion protection - the MACX ranges

### Safety-related function for the hazardous area

The term SIL (safety integrity level) is becoming more and more significant in the field of process technology. It defines the requirements that a device or a system is expected to fulfill so that the probability of failure can be established. The aim is to achieve the maximum possible operational reliability. If a device or system fails, a defined state is attained. Standard-based inspections are carried out to determine statistical probability.

### Application of SIL on the basis of IEC 61508 and IEC 61511

The SIL standard is used for a wide range of industries within the process industry, including the chemical industry, refineries, oil and gas production, paper manufacturing, and conventional power generation. In addition to functional safety requirements, systems in potentially explosive areas are also subject to Ex standards EN 60079-0 ff.

### IEC 61508: "Functional safety of electrical/electronic/programmable electronic safety-related systems"

This standard describes the requirements that the manufacturer has to bear in mind when producing devices or systems.

### IEC 61511: "Functional safety - Safety instrumented systems for the process industry sector"

The IEC 61511 standard describes the requirements for achieving systems with functional safety

Compliance with the standard is determined by operators, owners, and planners on the basis of safety plans and national regulations. In addition, the standard also describes the requirements for using a device in an application on the basis of its proven effectiveness (proven in use).

### SIL marking on devices

The products in the MACX range from Phoenix Contact, which have been developed according to IEC 61508, are marked with the designation SIL 2 or SIL 3. This indicates clearly that the devices may be suitable for safety instrumented functions (SIF).

To determine whether they can actually

be used, you need to calculate the sum of the probability of failure values for all the devices in the signal circuit. The values required for this can be found in the safety user manual accompanying any SIL product.

### Overview of terms from SIL standards IEC 61508 and IEC 61511

<b>SIL</b>	<b>Safety Integrity Level</b>	<b>E/E/PES</b>	Electrical/electronic/programmable electronic systems This term is used for all electrical devices or systems which can be used to execute a safety instrumented function. It includes simple electrical devices and all types of programmable logic controllers (PLCs).
<b>EUC</b>	<b>Equipment under control</b> Equipment, machines, devices or systems used in production, materials processing or transport.	<b>PFH</b>	<b>Probability of dangerous Failure per Hour</b> Describes the probability of dangerous failure occurring per hour.
<b>MTBF</b>	<b>Mean Time Between Failures</b> The expected mean time between failures.	<b>SFF</b>	<b>Safe failure fraction</b> Describes the proportion of harmless failures. This is the ratio of the rate of safe failures plus the rate of diagnosed or detected faults in relation to the total failure rate of the system.
<b>PFD</b>	<b>Probability of failure on demand</b> The probability of a failure on demand. Describes the probability of a safety instrumented system failing to perform its function when required.	<b>SIF</b>	<b>Safety Instrumented Function</b> Describes the safety instrumented functions of a system.
<b>PFDavg</b>	<b>Average Probability of Failure on Demand</b> The average probability of the function failing on demand.	<b>SIS</b>	<b>Safety Instrumented System</b> An SIS (safety instrumented system) consists of one or more safety instrumented functions. An SIL requirement is applicable for each of these safety instrumented functions.

## Signal conditioners with functional safety and explosion protection - the MACX ranges

### SIL inspection

The complete signal path must be taken into account during the SIL inspection. The example shows how in a typical safety application the calculation is based on average failure probabilities of individual devices.

Table 2 of the IEC 61508-1 standard describes the relationship between the average failure probability and the attainable SIL. Here, the level required determines the overall budget for the sum of all PFD values.

A system with a single-channel structure with a low demand rate is used as an example; the average PFD value is between  $10^{-3}$  and  $< 10^{-2}$ .

The INTERFACE Analog and INTERFACE Ex product ranges include products that meet the requirements for explosion protection as well as functional safety.

Safety integrity level SIL	Operating mode with a low demand rate (average probability of the specified function failing on demand)
4	$\geq 10^{-5}$ to $< 10^{-4}$
3	$\geq 10^{-4}$ to $< 10^{-3}$
2	$\geq 10^{-3}$ to $< 10^{-2}$
1	$\geq 10^{-2}$ to $< 10^{-1}$

Safety integrity level: failure limit values for a safety function which is operated in an operating mode with a low demand rate.

### Example:

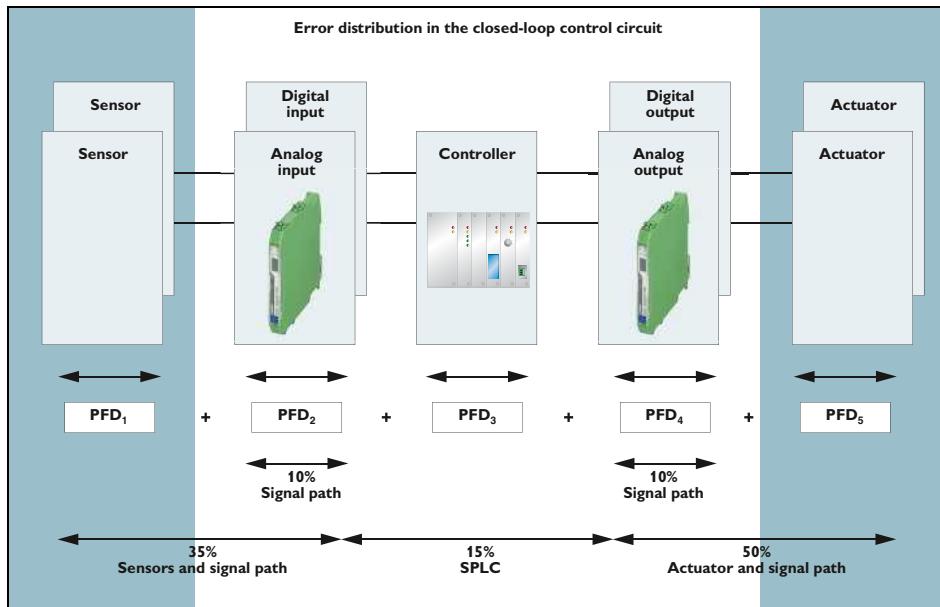

A sensor and actuator are assembled in the field and are exposed to chemical and physical loads (process medium, pressure, temperature, vibration, etc.). Accordingly, these components have a high risk of failure:

- The sensor accounts for 25% of the overall PFD
- The actuator accounts for 40% of the overall PFD

Neither the failsafe controller nor the interface modules come into contact with the process medium and both are usually located in a protected control cabinet:

- The failsafe controller accounts for 15% of the overall PFD
- Each of the interface modules accounts for 10% of the overall PFD

Typically, the values form the basis for a calculation.

## Signal conditioners with functional safety and explosion protection - the MACX ranges

### Functional Safety Performance Level (PL) according to EN ISO 13849-1 and EN 62061

#### General

In modern industrial systems, the amount of complex technical equipment used is constantly increasing. The purpose of safety technology is to reduce the risk as far as possible but at least to a reasonable degree. At the same time, the availability of production equipment should not be restricted any more than is absolutely necessary.

The Machinery Directive defines the requirements machinery must meet before it can be placed on the market and operated in the European Economic Area. It also contains essential health and safety requirements for the planning and construction of machinery and safety components.

However, the number of systems subject to the directive that do not belong to classical machine building is increasing continually. For example, this includes wind power plants. However, biogas systems, distributed energy generation in general and other process engineering systems also focus on the statutory requirements.

For this reason, analog signals are increasingly being handled according to the specifications of the Machinery Directive.

Every "machine" or system poses a risk. According to the requirements of the Machinery Directive, a risk assessment must be carried out for every machine. If the risk is greater than the level of risk that can be tolerated, risk reduction must be implemented.

#### Functional Safety

In order to achieve the necessary "functional safety" of a system, it is essential for the safety-related parts of the safety equipment and control devices to operate correctly and, in the event of failure, for the system to remain in the safe state or enter a safe state. The requirements for achieving functional safety are based on the following objectives:

- Avoidance of systematic errors
- Control of systematic errors
- Control of random faults or failures

The EN ISO 13849 (and EN 62061) standard specifies the various safety levels in the form of the Performance Level "PL" (and the Safety Integrity Level "SIL") depending on the extent of the risk and describes the characteristics of the safety functions.

#### Practical procedure according to EN ISO 13849

In practice, the following steps have proved to be effective:

##### 1. Definition of the safety function

The information is derived from the risk assessment.

##### 2. Determination of the required Performance Level (PL)

For each safety function, the required performance level is estimated using the adjacent risk graph (Fig. 3).

##### 3. Technical implementation

This step involves the technical pre-planning of the safety function, taking possible technologies and components into account.

##### 4. Dividing the safety function into subsystems

Implementation takes place in block diagrams. As a rule, a safety function consists of a sensor-logic actuator.

the SISTEMA library (Fig. 4).

Further safety technology characteristic data is in the category, the DC value, and the MTTFD value (Fig. 5).

#### 6. Determination of the achieved PL

The manufacturer of subsystems states the category and makes the specifications on the achieved PFHd value and the PL available.

#### 7. Verification of the achieved PL

Each individual subsystem and the entire safety chain must both meet the requirements of the necessary PL. This includes both the quantitative evaluation and the consideration of systematic aspects, such as proven components and safety principles.

#### 8. Validation

Finally, it is necessary to check whether the selected measures achieve the required risk reduction and therefore, the protection objectives of the risk assessment. The result is included in the final risk assessment.

#### Definitions:

$PFH_d$ : probability of dangerous failure per hour

DC: diagnostic coverage

$MTTF_d$ : mean time to dangerous failure

#### Category:

$B10_d$ : number of operating cycles, after which 10% of the devices have failed

CCF: common cause failure

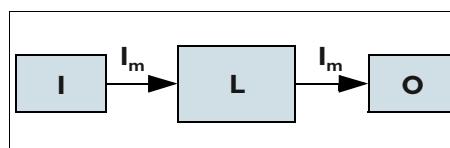

Figure 2:  
Safety technology  
block diagram (according to EN 13849-1)

#### 5. Determination of the achieved PL for each subsystem

A characteristic value when determining the performance level is the so-called PFHd value, the statistical "probability of dangerous failure per hour". The safety technology characteristics are in the product data sheet, the FUNCTIONAL SAFETY CHARACTERISTICS data sheet or

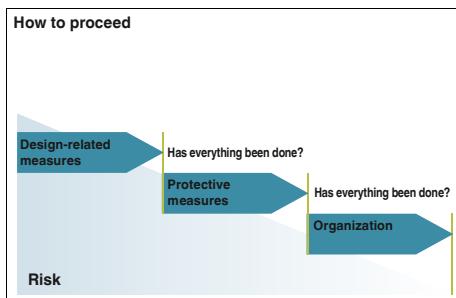

Figure 1:  
Risk reduction according to EN ISO 12100

## Signal conditioners with functional safety and explosion protection - the MACX ranges

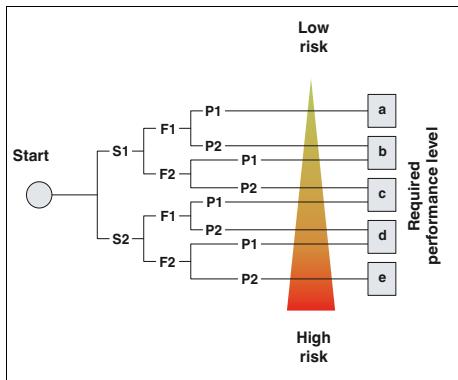

Figure 3: Risk graph

Meaning of individual parameters:

S: severity of injury

- S1: slight (reversible) injuries

- S2: severe (irreversible) injuries

F: frequency and duration of exposure to the hazard

- F1: seldom to not very frequent

- F2: frequent to continuous or long

P: possibility of avoiding or limiting damage

- P1: possible under certain conditions

- P2: hardly possible

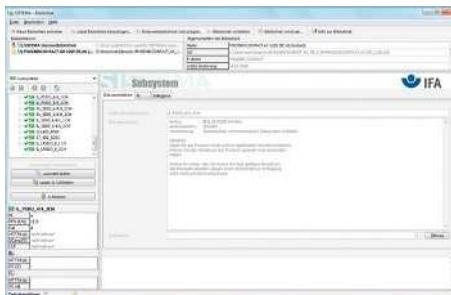

Figure 4: SISTEMA library

SISTEMA is a product library with which safety functions can be easily calculated. The products from MACX Safety and MACX Safety Ex are included in a SISTEMA library. It is available from the product download area on the Phoenix Contact homepage.

Phoenix Contact offers a series of services surrounding the topic of functional safety.

It covers everything from initial planning and startup to the modernization of the safety lifecycle. There is also a training concept. Dates are published on the homepage.

In addition, all questions are answered via the free safety hotline.

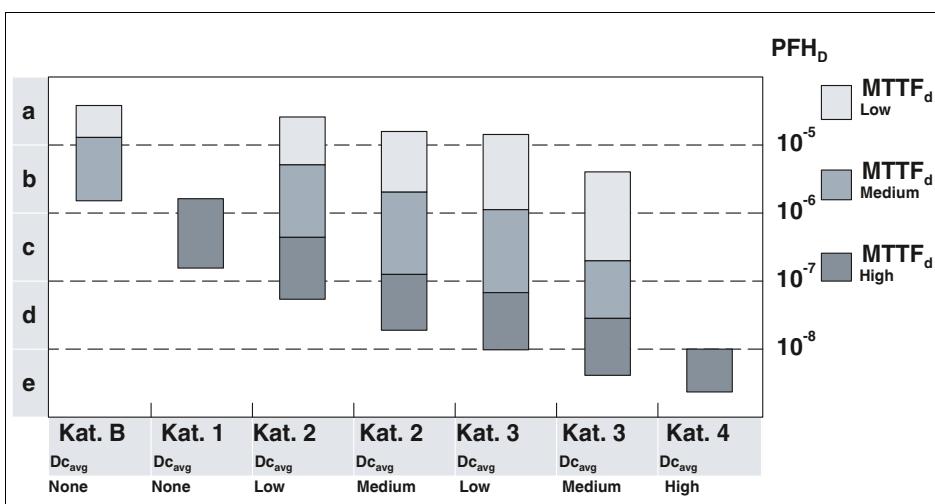

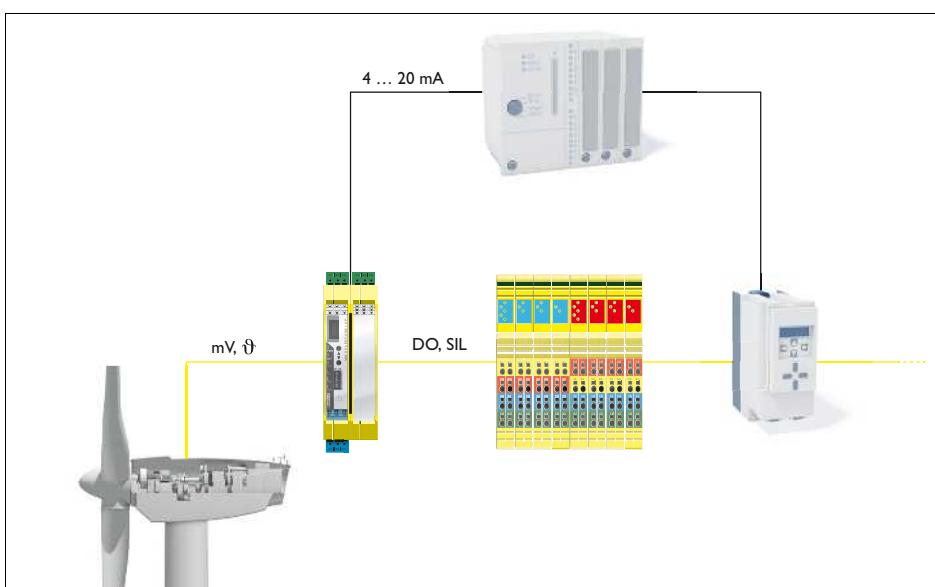

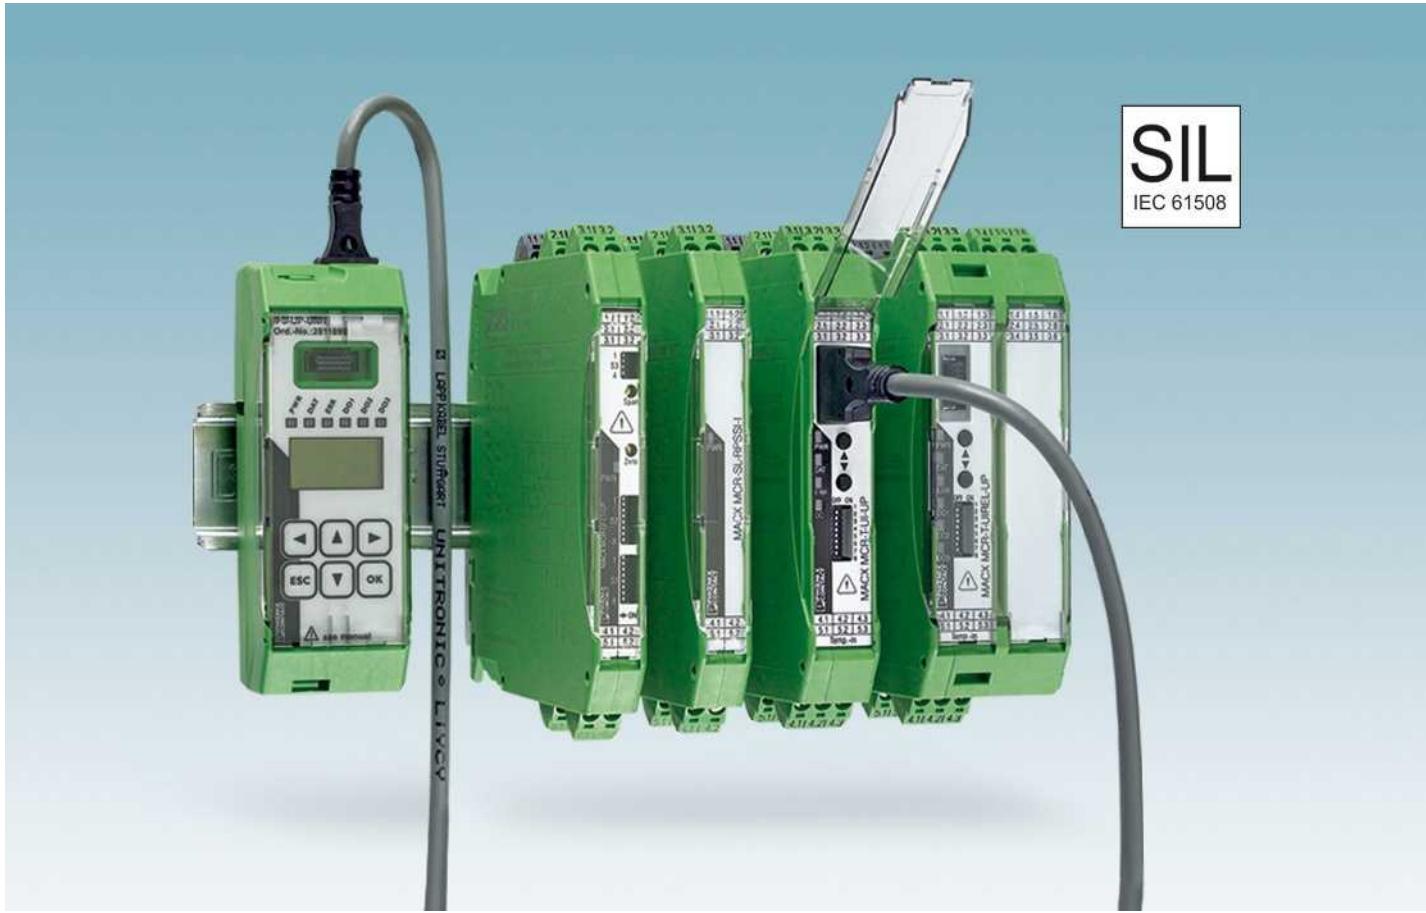

Figure 5:  
Relationship between PL, category, DC, and MTTFd (according to EN 13849-1)

Application example:  
safety-related temperature monitoring in a wind power plant

### Reliable and safe

MACX Analog - safe and high-performance signal conditioners. This product range enables you to safely isolate, condition, filter, and amplify all the signals of your system.

In all phases of the product life cycle, the MACX Analog range has been consistently developed and produced according to standards for functional safety. Save planning and operating costs – by combining high signal flexibility with safe isolation and SIL evaluation.

### Even for the hazardous area

The devices of the MACX Analog range are approved according to the Ex n protection type for use in Ex zone 2.

### Choose the right MACX Analog signal conditioner for your application:

The universal nature of the product range provides you with a solution for all applications using analog signal transmission. You are free to choose between either multifunctional high-end devices or reasonably-priced standard modules with exactly the right functions.

### Analog IN/OUT

- Universal configurable 3-way signal conditioners
- Repeater power supply and signal duplicator with HART signal transmission
- Output signal conditioners with HART signal transmission

### Temperature

- Universal temperature transducers for resistance thermometers, resistance-type sensors, potentiometers, thermocouples, and mV sources – also with safe limit value relays as an option
- Configurable temperature transducer for resistance thermometers and resistance-type sensors
- Configurable temperature transducer for thermocouples and mV sources

### Digital IN

- NAMUR signal conditioner with input for NAMUR proximity sensors or switches.
- Different versions in single or two-channel design, with relay or transistor output or for signal duplication.

### Flexible energy supply

#### DIN rail connector-compatible

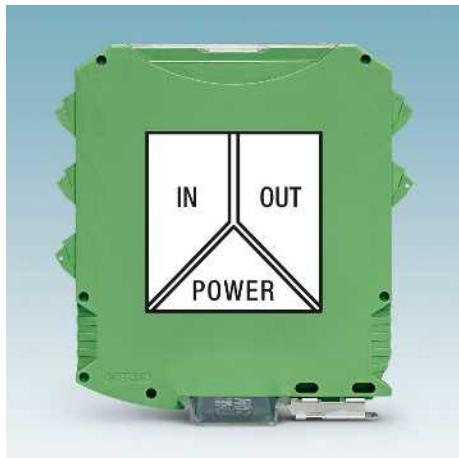

The DIN rail connector enables modular bridging of the 24 V supply voltage.

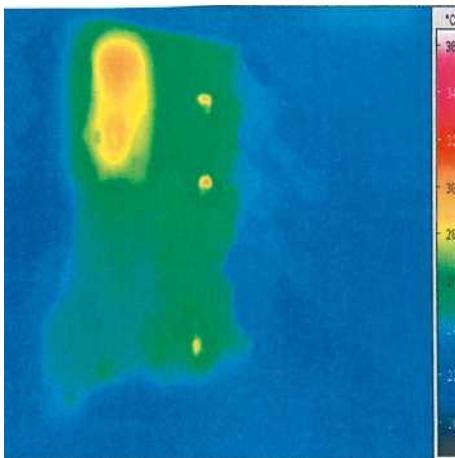

#### Wide range supply

The modules featuring a wide range supply (...-UP) can be used in all power supply networks the world over without the need for additional power supply units.

## Signal conditioners with SIL functional safety - MACX Analog

**Precise, interference-free signal transmission**

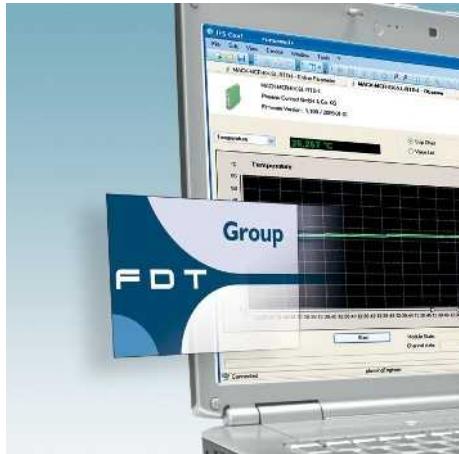

- Precise and interference-free signal transmission due to a patented transmission concept with safe electrical isolation.

**Long service life and high operational reliability**

- Long service life and high operational reliability over the entire operating temperature range, thanks to low power consumption and self-heating

**Easy configuration**

- Without software via DIP switches on the device front or with the operator interface and display unit.

**Easy configuration and monitoring**

- Either via FDT/DTM or user-friendly stand-alone software – with integrated monitoring function

**Easy installation, power bridging, and diagnostics**

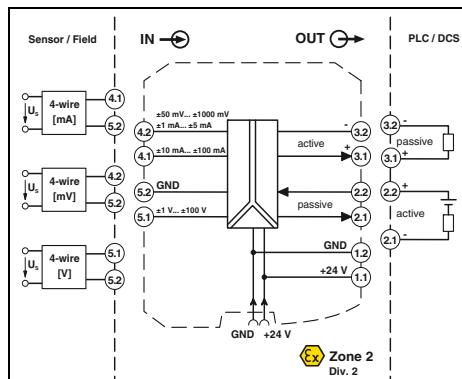

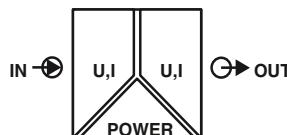

- Flexible supply voltage bridging and the option of redundant, diode-decoupled supply and error indication.
- Plug-in, coded connection terminal blocks with test sockets; with screw connection or with fast push-in connection technology as an option

**Fast and error-free signal connection**

- Compact Termination Carriers connect MACX Analog devices to the automation system – Plug and Play

### Technical data

Input data	4 mA ... 20 mA / 0 mA ... 20 mA
Input signal	> 21.5 V (at 20 mA)
Transmitter supply voltage	< 3.9 V (in input signal conditioner operation)
Voltage drop	
Output data	0 mA ... 20 mA (active)
Output signal (per output)	4 mA ... 20 mA (active)
Load	< 450 Ω (at 20 mA)
Output ripple	< 20 mV <sub>rms</sub>
General data	
Supply voltage range	19.2 V DC ... 30 V DC (24 V DC (-20% ... +25%))
Current consumption	< 75 mA (at 24 V DC)
Power dissipation	< 1.45 W (at 24 V DC / 20 mA)
Temperature coefficient	< 0.01 %/K
Step response (10-90%)	< 1.3 ms (for 4 mA ... 20 mA step)
Transmission error, typical	< 0.05 % (of final value)
Maximum transmission error	< 0.1 % (of final value)
Underload/overload range	according to NE 43
Electrical isolation	
Input/output/power supply	300 V <sub>rms</sub> (rated insulation voltage (surge voltage category II); pollution degree 2, safe isolation as per EN 61010-1)) 2.5 kV (50 Hz, 1 min., test voltage)
Ambient temperature range	1.5 kV AC (50 Hz, 1 min., test voltage)
Status indication	-20 °C ... 60 °C (any mounting position)
SMART communication (per output)	Green LED (PWR supply voltage)
Protocols supported	Yes
Housing material	HART
Dimensions W / H / D	PA 66-FR
Screw connection solid / stranded / AWG	12.5 / 99 / 114.5 mm
Push-in connection solid / stranded / AWG	0.2 ... 2.5 mm <sup>2</sup> / 0.2 ... 2.5 mm <sup>2</sup> / 24 - 14

Repeater power supply and input signal conditioner for the operation of 2-wire measuring transducers, 4-wire measuring transducers, and mA current sources

- Input 0/4...20 mA (powered or not powered)
- Output 0/4...20 mA (active or passive), 0/1...5 V, can be switched via the DIP switch
- Bidirectional transmission of digital HART communication signals
- Plug-in screw or push-in connection technology, with integrated sockets for HART communicators
- 250 Ω resistor that can be activated via DIP switches to increase the HART impedance in the case of low-impedance systems
- 3-way electrical isolation
- Wide range power supply: 19.2 ... 253 V AC/DC
- Up to SIL 2 according to IEC 61508
- Installation in zone 2 permitted

#### Notes:

Information about the power and fault signaling module as well as about the DIN rail connectors and marking material can be found from page 178

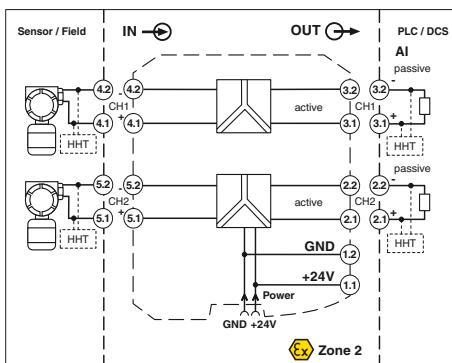

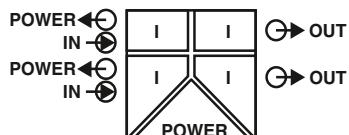

Test plugs for test sockets can be found on page 180

Housing width 12.5 mm

### Technical data

#### Input data

Resistance thermometers

Pt, Ni, Cu sensors: 2, 3, 4-wire

Resistor

0 Ω ... 2000 Ω

Cable resistance

50 Ω per line

Sensor input current

200 μA ... 1 mA

Measuring range span

> 50 K

#### Output data

0 mA ... 20 mA / 4 mA ... 20 mA

Output signal

≤ 500 Ω

Load

As per NE 43 or can be freely defined

Behavior in the event of a sensor error

< 50 μA<sub>PP</sub>

Output ripple

19.2 V DC ... 30 V DC (24 V DC (-20% ... +25%))

General data

< 40 mA (24 V DC)

Supply voltage range

< 1 W

Current consumption

0.01 %/K

Power dissipation

typ. 800 ms (with SIL)

Temperature coefficient

max. 1200 ms (with SIL)

Step response (0–99%)

typ. 700 ms (without SIL)

Transmission error, total

max. 1100 ms (without SIL)

ZERO / SPAN adjustment

0.05 % × 100 [K] / measuring range span [K] + 0.05 %

Electrical isolation

± 5 % / ± 5 %

#### Input/output/power supply

#### Input/output Input/power supply

2.5 kV (50 Hz, 1 min., test voltage)

### Accessories

IFS-USB-PROG-ADAPTER	2811271	1
----------------------	---------	---

Programmable temperature transducer for operating resistance thermometers and resistance-type sensors. The measured values are converted into a linear 0 ... 20 mA or 4 ... 20 mA signal.

- Input for resistance thermometers and resistance-type sensors
- 0 ... 20 mA or 4 ... 20 mA output
- Configuration via software (FDT/DTM): Sensor type, connection method, measuring range, measuring unit, filter, alarm signal, and output range
- Programming during operation and also voltage-free using IFS-USB-PROG-ADAPTER programming adapter
- Status indicator for supply voltage, cable, sensor, and module errors
- 3-way electrical isolation
- Power supply via DIN rail connector possible
- Up to SIL 2 according to IEC 61508
- Installation in zone 2 permitted

#### Notes:

To order a product with an order configuration, enter the required configuration by referring to the adjacent order key.

The configuration software can be downloaded from the Internet ([phoenixcontact.net/products](http://phoenixcontact.net/products)).

Information about the power and fault signaling module as well as about the DIN rail connectors and marking material can be found from page 178

For information on the programming adapter, refer to page 89

Test plugs for test sockets can be found on page 180

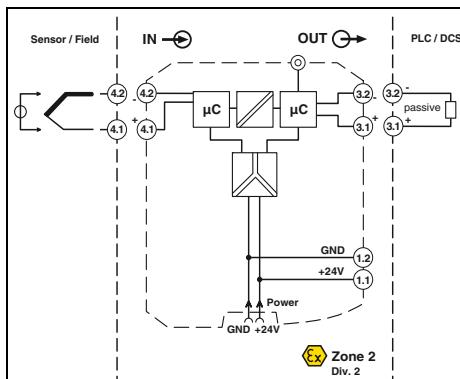

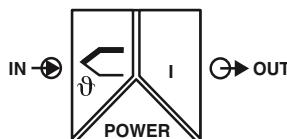

Information on Plug and Play connection using system cabling can be found from page 182

NAMUR signal conditioner for operating proximity sensors and mechanical contacts

- Input for NAMUR proximity sensors (EN 60947-5-6), floating contacts or contacts with resistance circuit
- Two relay signal outputs (N/O contact); output 2 can be used as an error message output
- Reversible direction of action (operating current or closed-circuit current behavior)
- Line fault detection (LFD), can be activated/deactivated, error message signaled by red flashing LED with de-excitation of output relay
- Power supply and error indication possible via the DIN rail connector
- LED displays for indicating supply voltage, circuit state, and malfunctions to NAMUR NE 44
- 4-way electrical isolation
- Up to SIL 2 according to IEC 61508
- Installation in zone 2 permitted

### Accessories

#### Power and fault signaling module

Power and fault signaling module for feeding the 24 V supply voltage to the DIN rail connectors and signaling line faults and power supply failures.

- One-time or redundant supply, decoupled from diode, protected against polarization
- Supply current up to 3.75 A
- Relay output (PDT) and flashing LED for error messages
- Error message in the event of a power supply failure or fuse fault
- Bus cable fault message for MACX MCR-...(2)NAM... devices connected via DIN rail connectors
- Replaceable fuse
- Installation in zone 2 permitted

## Signal conditioners with SIL functional safety - MACX Analog

### Termination Carriers for MACX Analog Ex signal conditioners

**TC... Termination Carriers** are compact solutions for quickly and smoothly connecting DIN rail devices from the MACX Analog Ex series to input/output cards of automation systems using system cabling.

The Termination Carriers combine the advantages of modular DIN rail devices with those offered by Plug and Play rapid cabling solutions to provide a consistent solution for system technology.

#### Compact

- Saves up to 30% of space due to compact design

#### Robust and reliable

- Stable, vibration-resistant aluminum carrier device profile
- PCB is completely decoupled from modules
- PCB without active components
- Redundant supply and monitoring in separate DIN rail module

#### Easy maintenance

- Use of standard DIN rail devices
- Easy access to connection points
- Quick and safe module connection with plug-in and coded cable sets

#### Flexible

- Horizontal or vertical DIN rail mounting
- Profile section without pitch markings for I/O cards with specific number of channels
- Can be specifically adapted for I/O cards of various automation systems with different system plug types

Select standard DIN rail device

Select module carrier

Select controller-specific front adapter and system cable

Solutions are also available for MINI Analog,  
MACX Analog Ex, and Safety

## Termination Carriers for MACX Analog Ex signal conditioners

### The TC-D37SUB-ADIO16-EX-P-

**UNI** universal Termination Carrier is a compact solution which connects signal conditioners from the MACX Analog series to analog or binary input/output cards of automation systems.

### The TC-D37SUB-AIO16-EX-PS-UNI

Termination Carrier design, when combined with the MACX MCR-S-MUX HART multiplexer, also enables communication between HART-capable field devices and a management system.

- Connection of up to 16 single-channel (Ex i) signal conditioners
- Universal 1:1 signal routing to a 37-pos. D-SUB connector
- For system cables with D-SUB socket and open ends for universal connection
- Redundant supply and monitoring in separate DIN rail module

#### Notes:

Contact us: specific Termination Carrier designs for I/O modules of various automation systems are available, planned or can be implemented according to your specifications.

### Integrate analog signals safely

Integrate analog signals easily into your safety application according to the Machinery Directive. The MACX Safety analog signal conditioners are certified according to EN ISO 13849-1 with performance level PL d.

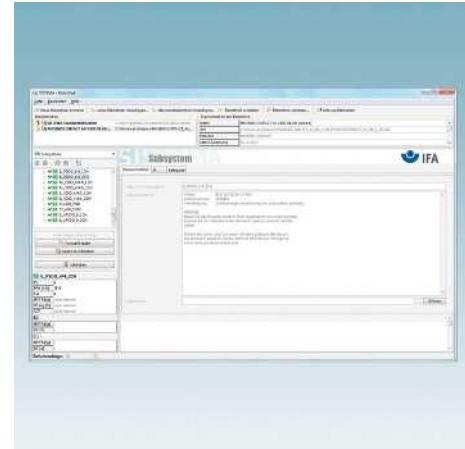

### Choose the right MACX Safety signal conditioner for your application:

#### Analog IN

- 4...20 mA repeater power supplies and input signal conditioners with 2 electrically isolated outputs

#### Temperature

- Universal temperature transducers

#### Direct switching of limit values possible without an additional safety controller

- Cost savings: direct, safe switching of limit values possible without an additional safety controller
- Easy to combine active or passive analog signals with other safety modules

#### Easy planning of the safety application with SISTEMA

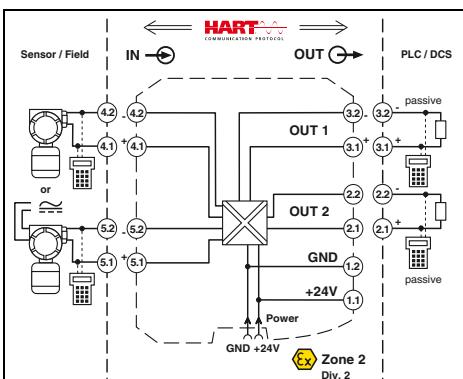

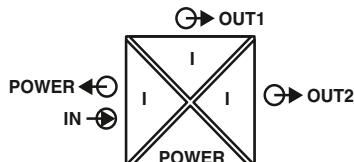

- Easy planning of the safety application with SISTEMA: the required data is already stored there

#### DIN rail connector-compatible

The DIN rail connector enables the modular bridging of the 24 V supply voltage.

## Analog IN Repeater power supply

Connector, for current signals between +20 mA and -20 mA	MACX MCR-I20	2905680	1

## Configuration software ANALOG-CONF and FDT/DTM

Input configuration with indication of the pin assignment

Relay configuration

## ANALOG-CONF

The user-friendly ANALOG-CONF software allows you to quickly and clearly configure the temperature modules. The pin assignment for the input and output is directly displayed. You have access to the complete range of configurable parameters. You have the option to pre-configure parameters and then import them into any number of temperature transducers or read the data from the device and directly display the settings and measured values.

## FDT/DTM

Configuration is also possible via the FDT/DTM universal configuration tool. The DTM files can simply be downloaded in the download area for the item.

### The following parameters can be configured:

- Restart following failsafe

#### Input:

- Resistance thermometer
- Thermocouples
- Potentiometer
- Remote resistance-type sensor
- Voltage signals  $\pm 1$  V
- User characteristic curve
- Additional analog signals
- Filter
- Cold junction

#### Analog output:

- Type of fault signaling

#### Switching outputs:

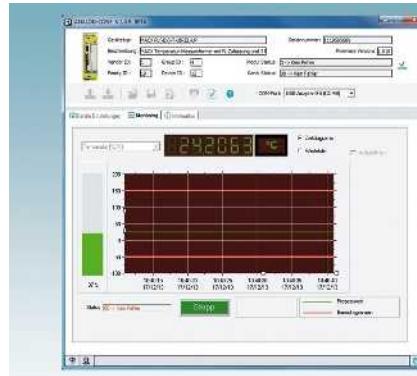

- Acknowledgment, switching behavior
- Switch-on/off delay

#### Monitoring:

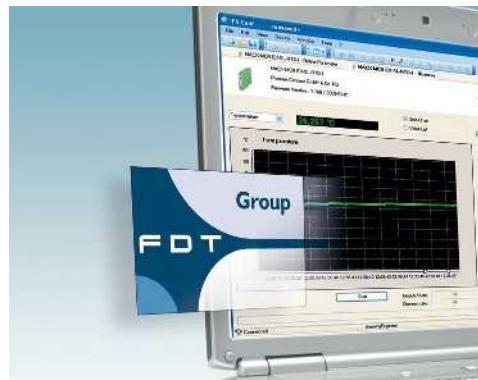

- Representation in diagram or value list, recording possible

#### Service:

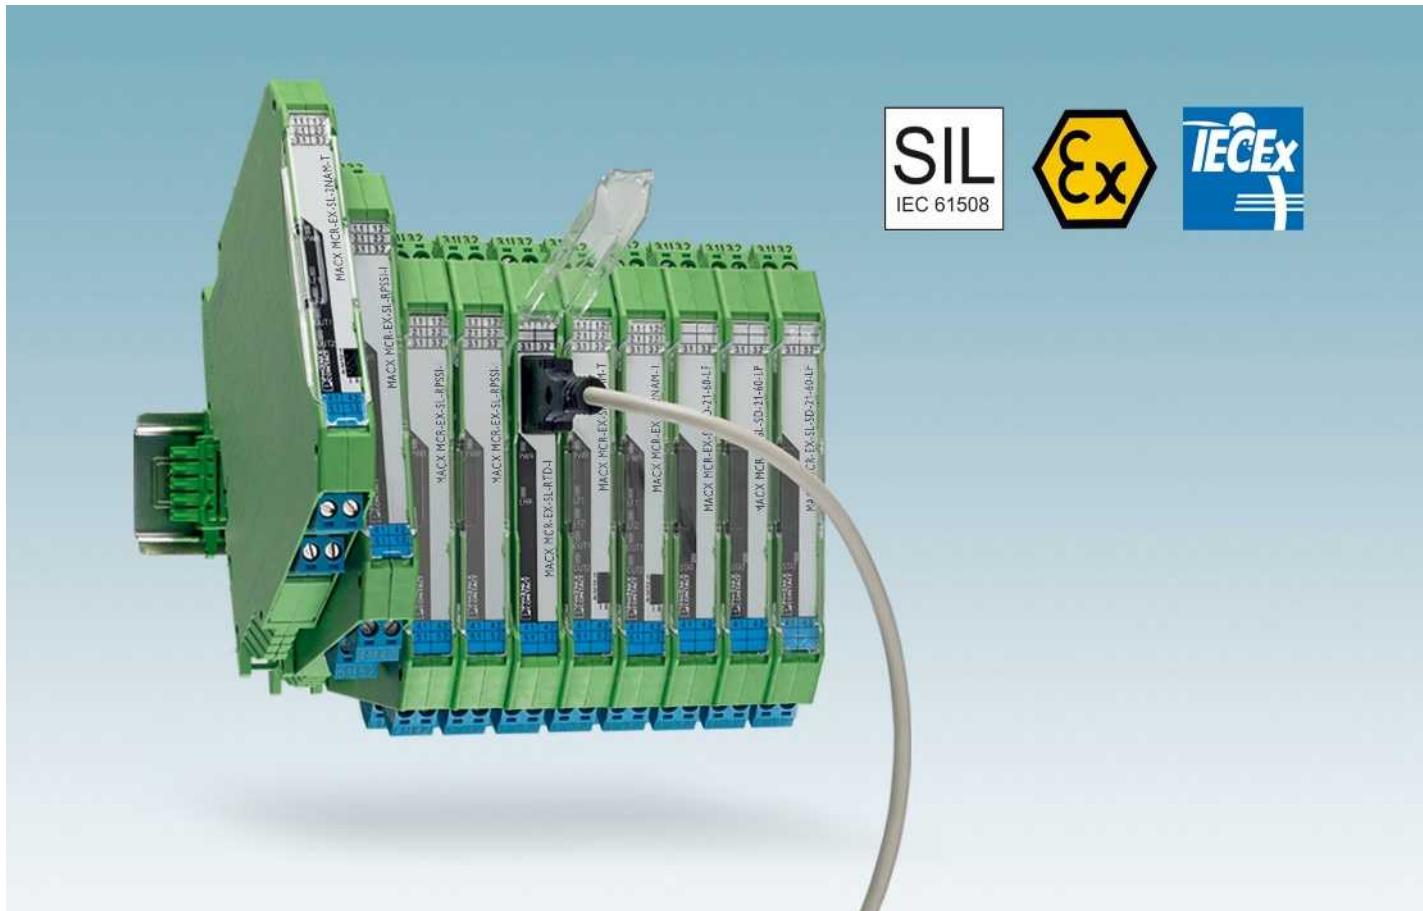

- Reset, password protection, display DIP switch position
- And much more

Monitoring function

Configuration with FDT/DTM

### Highly compact – leading technology

MACX Analog Ex – single and two-channel signal conditioners for intrinsically safe circuits in the Ex area. The MACX Analog Ex signal conditioners ensure maximum system safety and explosion protection within a minimum amount of space. With an overall width of just 12.5 mm, this comprehensive range for analog signal conditioning is approved according to ATEX and IECEx and consistently SIL-certified.

### Safe and reliable functions

Consistent SIL certification. The MACX Analog Ex signal conditioners are developed and produced according to functional safety and IEC 61508 standards. This ensures the highest level of reliability and safety for your systems.

### Maximum explosion protection for all Ex zones and gas groups

As associated equipment according to the intrinsic safety (Ex i) protection type, the MACX Analog Ex signal conditioners isolate intrinsically safe circuits from non-intrinsically safe circuits and ensure safe limitation of the energy supplied to the Ex area. Furthermore, they handle extensive signal conditioning tasks.

All MACX Analog Ex signal conditioners are approved in accordance with the applicable ATEX/IECEx standards:

- [Ex ia] – for intrinsically safe circuits up to Ex zone 0 and Ex zone 20
- Ex n – for installing devices in Ex zone 2
- In addition, relevant national approvals such as UL and GOST are available

### Choose the right MACX Analog Ex signal conditioner for your application:

#### Analog IN

Measuring transducer repeater power supply and input signal conditioner for the intrinsically safe operation of 2-wire transmitters, 4-wire measuring transducers, and current sources.

#### Analog OUT

Output signal conditioners for the intrinsically safe operation of control valves, I/P converters, and displays.

#### Temperature

Configurable temperature transducers for the intrinsically safe operation of resistance thermometers, remote resistance-type sensors, thermocouples, and mV sources – with safe limit value relays as an option.

#### Digital IN

NAMUR signal conditioners for the intrinsically safe operation of proximity sensors and switches.

#### Digital OUT

Solenoid drivers for the intrinsically safe operation of solenoid valves and alarm transmitters.

#### Flexible energy supply

#### DIN rail connector-compatible

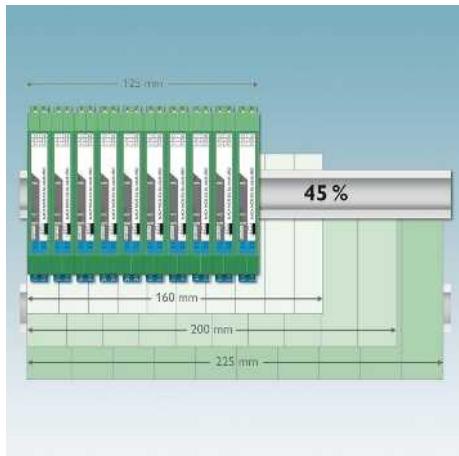

The DIN rail connector enables the modular bridging of the 24 V supply voltage.

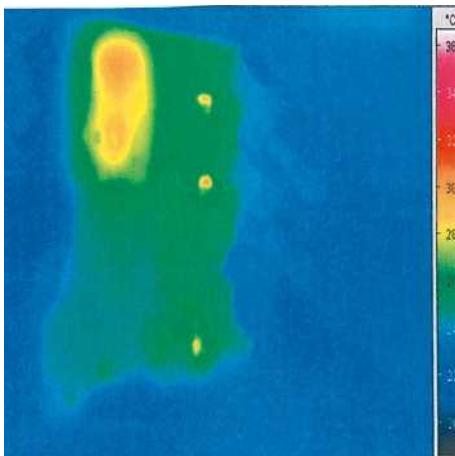

#### Wide range supply

The modules featuring a wide range supply (...-UP) can be used in all power supply networks the world over without the need for additional power supply units.

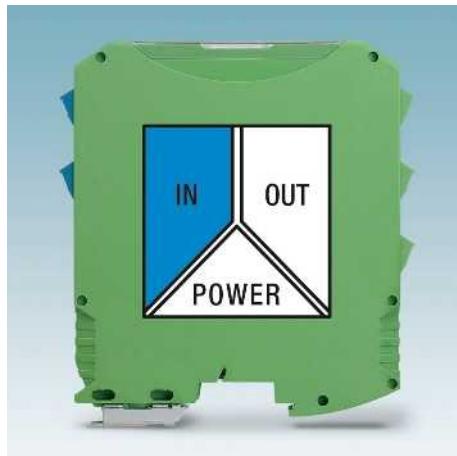

## Ex i signal conditioners with SIL functional safety - MACX Analog Ex

**Significant space savings**

- Housing width of just 12.5 mm for all single and two-channel devices with DIN rail connector connection
- Space saving of up to 45% compared to other Ex i signal conditioners on the market

**Long service life and high operational reliability**

- Long service life and high operational reliability over the entire operating temperature range, thanks to low power consumption and self-heating

**Precise, interference-free signal transmission**

- Precise and interference-free signal transmission due to a patented transmission concept with safe electrical isolation.

**Easy installation, power bridging, and diagnostics**

- Flexible supply voltage bridging and the option of redundant, diode-decoupled supply and error indication.
- Plug-in, coded connection terminal blocks with test sockets; with screw connection or with fast push-in connection technology as an option

**Easy configuration and monitoring**

- Either via FDT/DTM or alternatively via user-friendly stand-alone software – with integrated monitoring function
- Or without software via DIP switches on the housing front or with the operator interface and display unit

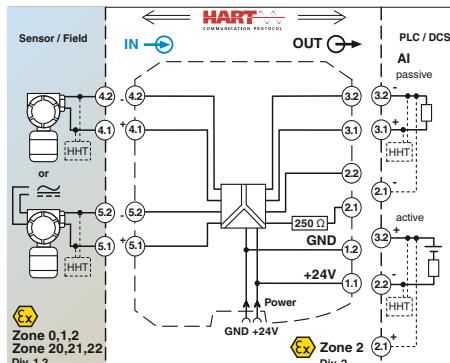

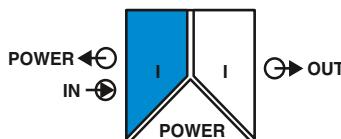

**Fast and error-free signal connection**

- Compact Termination Carriers connect MACX Analog Ex devices to the automation system – Plug and Play

### Analog IN

#### Repeater power supply, Ex i

**Repeater power supply and input signal conditioner**

Functional Safety  
Ex: EAC Ex II 1G  
Housing width 12.5 mm

#### Technical data

Repeater power supply and input signal conditioner for the operation of intrinsically safe (Ex i) 2-wire measuring transducers, 4-wire measuring transducers, and mA current sources installed in Ex areas.

- 0/4 ... 20 mA input, [Ex ia] (powered or not powered)
- 0/4...20 mA output (active or passive)
- Bidirectional transmission of digital HART communication signals
- Plug-in screw or push-in connection technology, with integrated sockets for HART communicators
- Terminal point with 250 Ω resistor to increase the HART impedance in the case of low-impedance systems
- 3-way electrical isolation
- Power supply via DIN rail connector possible
- Up to SIL 2 according to IEC 61508
- Installation in zone 2 permitted

#### Notes:

Notes:		
To order a product with an order configuration, please enter the desired configuration by referring to the order key, see page 197		
The configuration software can be downloaded from the Internet (phoenixcontact.net/products).		
Information about the power and fault signaling module as well as about the DIN rail connectors and marking material can be found from page 213		
For information on the programming adapter, refer to page 89		
Information on Plug and Play connection using system cabling can be found from page 216

#### Notes:

To order a product with an order configuration, enter the required configuration by referring to the adjacent order key.

The configuration software can be downloaded from the Internet (phoenixcontact.net/products).

Information on the IFS-OP-UNIT operating and display unit and the associated IFS-OP-CRADLE DIN rail cradle can be found on page 170

For information on the programming adapter, refer to page 89

**Digital IN****NAMUR signal conditioner, Ex i**

**SIL**  
IEC 61508

Signal output: PDT relay

Functional Safety

Ex: Functional Safety

Housing width 12.5 mm

### Technical data

**NAMUR signal conditioner for intrinsically safe operation of proximity sensors and mechanical contacts installed in Ex areas.**

- Input for NAMUR proximity sensors (EN 60947-5-6), floating contacts or contacts with resistance circuit, [Ex ia]
- Relay signal output (PDT)
- Reversible direction of action (operating current or closed-circuit current behavior)
- Line fault detection (LFD), can be activated/deactivated, error message signaled by red flashing LED with de-excitation of output relay
- Power supply and error indication possible via the DIN rail connector
- LED displays for indicating supply voltage, circuit state, and malfunctions to NAMUR NE 44
- 3-way electrical isolation
- Up to SIL 2 according to IEC 61508
- Installation in zone 2 permitted

#### Notes:

Information about the power and fault signaling module as well as about the DIN rail connectors and marking material can be found from page 213

Information about resistance circuits is given on page 180

Information on Plug and Play connection using system cabling can be found from page 216

### Technical data

NAMUR signal conditioner for intrinsically safe operation of proximity sensors and mechanical contacts installed in Ex areas.

- 2-channel
- Input for NAMUR proximity sensors (EN 60947-5-6), floating contacts or contacts with resistance circuit, [Ex ia]
- Relay signal output (N/O contact)
- Reversible direction of action (operating current or closed-circuit current behavior)
- Line fault detection (LFD), can be activated/deactivated, error message signaled by red flashing LED with de-excitation of output relay
- Power supply and error indication possible via the DIN rail connector
- LED displays for indicating supply voltage, circuit state, and malfunctions to NAMUR NE 44
- 3-way electrical isolation
- Up to SIL 2 according to IEC 61508
- Installation in zone 2 permitted

## Digital IN

## NAMUR signal conditioner, Ex i

With line fault transparency

Ex ia  
Housing width 12.5 mm

## Technical data

NAMUR signal conditioner for the intrinsically safe operation of proximity sensors or mechanical contacts installed in the Ex area.

- Input for NAMUR proximity sensors (EN 60947-5-6), floating contacts or contacts with resistance circuit, [Ex ia]
- Signal output with resistive behavior (transistor)
- Signal output with line fault transparency: line fault indicated directly via output to PLC or PCS. The output responds in accordance with EN 60947-5-6.
- Up to 5 kHz
- Direction of operation can be selected
- Line fault detection can be activated/deactivated
- Power supply and error indication possible via the DIN rail connector
- LED indicators for supply voltage, status, and fault according to NAMUR NE 44
- Plug-in screw or push-in connection technology
- Safe 3-way electrical isolation
- Up to SIL 2 according to IEC 61508
- Installation in zone 2 permitted

## Ex i signal conditioners with SIL functional safety - MACX Analog Ex

### Solenoid drivers for controlling solenoid valves

In order to control intrinsically safe Ex i solenoid valves, you have to have an intrinsically safe control circuit. This is provided by the solenoid drivers that are available from Phoenix Contact.

The following must be taken into account when dimensioning your intrinsically safe control circuit:

- Valve
- Cable with corresponding resistance
- Solenoid driver

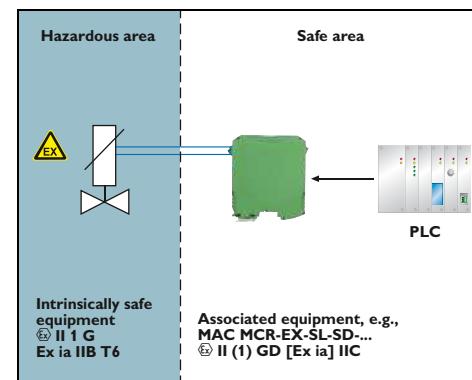

As a result, it may be the case that not all valves are compatible with the solenoid drivers.

Below is an extract from a table showing possible combinations of valves and solenoid drivers.

A complete and updated list (along with details of the technical data of suitable valves, the maximum cable lengths, and the maximum cable resistances of the individual combinations) can be found on the Internet at:

[www.phoenixcontact.net/products](http://www.phoenixcontact.net/products)

## Digital OUT Solenoid driver, Ex i

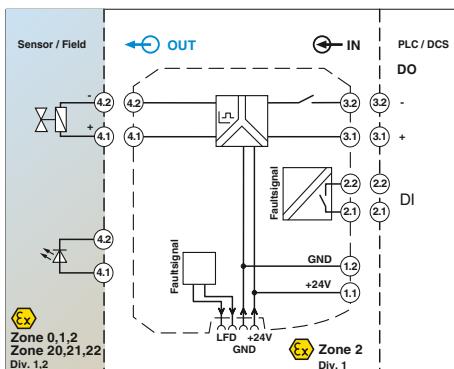

Solenoid driver for the intrinsically safe control of Ex i solenoid valves, alarm transmitters or indicators installed in the Ex area.

- Input: logic (low/high signal)
- Output: 48 mA current limitation at 9.5 V, [Ex ia]
- Line fault detection (can be activated/deactivated)
  - Directly via signal channel
  - Or via switching output
- Transparent for test pulses
- Power supply and error indication possible via the DIN rail connector
- LED indicators for supply voltage, status, and fault according to NAMUR NE 44
- Plug-in screw or push-in connection technology
- Safe 3-way electrical isolation
- Up to SIL 2 according to IEC 61508
- Installation in zone 2 permitted

### Notes:

Information on the power and fault signaling module, DIN rail connectors, system cabling, and marking material can be found from page 213

**SIL**  
IEC 61508

Current limitation 48 mA,  
with line fault detection

Functional Safety

Ex:

Housing width 12.5 mm

### Technical data

Input data	0 V DC ... 5 V DC (Open) 15 V DC ... 30 V DC < 12 mA 3 MΩ (high resistance (Mega Ω))
Transparent for test pulses	Yes
Output data	≥ 9.5 V DC (at 48 mA) > 48 mA (with line fault detection) > 23.3 V DC ≥ 269 Ω (internal resistance R <sub>o</sub> ) Yes < 30 ms < 50 Ω (short circuit on the line) > 10 kΩ (line break)
Output voltage	N/C contact 30 V DC 50 mA Yes
Current limitation	
No-load voltage	
Internal resistance	
Immunity to short-circuiting	
Response time t <sub>A</sub>

## Ex i signal conditioners with SIL functional safety - MACX Analog Ex

### Digital OUT

#### Solenoid driver, Ex i

**SIL**  
IEC 61508

Current limitation 25 mA

Functional Safety  
Ex:   
Housing width 12.5 mm

### Technical data

**Solenoid drivers for controlling intrinsically safe solenoid valves, alarm transmitters, and indicators installed in Ex areas.**

- 20 ... 30 V DC input
- Output [Ex ia]
- Various output characteristic curves compatible with standard solenoid valves
- Loop-powered: the required power is supplied via the control signal on the input side.
- Mechanically compatible with DIN rail connector
- 2-way electrical isolation
- Up to SIL 3 as per EN 61508
- Installation in zone 2 permitted

#### Notes:

A list of suitable valves and notes for calculating a valve circuit are available from the download center at phoenixcontact.net/products.

Information on marking material can be found on page 179

Information on Plug and Play connection using system cabling can be found from page 216

## Accessories

### Power and fault signaling module

Power and fault signaling module for feeding the 24 V supply voltage to the DIN rail connectors and signaling line faults and power supply failures.

- One-time or redundant supply, decoupled from diode, protected against polarization
- Supply current up to 3.75 A
- Relay output (PDT) and flashing LED for error messages
- Error message in the event of a power supply failure or fuse fault
- Bus cable fault message for MACX MCR-...-(2)NAM... devices connected via DIN rail connectors
- Replaceable fuse
- Installation in zone 2 permitted

**Power and fault signaling module**

## Ex i signal conditioners with SIL functional safety - MACX Analog Ex

### Termination Carriers for MACX Analog Ex signal conditioners

**HART**  
COMMUNICATION PROTOCOL

Select standard DIN rail device

Select module carrier

**TC...** Termination Carriers are compact solutions for quickly and smoothly connecting DIN rail devices from the MACX Analog Ex series to input/output cards of automation systems using system cables.

The Termination Carriers combine the advantages of modular DIN rail devices with those offered by Plug and Play rapid cabling solutions to provide a consistent solution for system technology.

#### Compact

- Saves up to 30% of space due to compact design

#### Robust and reliable

- Stable, vibration-resistant aluminum carrier device profile
- PCB is completely decoupled from modules
- PCB without active components
- Redundant supply and monitoring in separate DIN rail module

#### Easy maintenance

- Use of standard DIN rail devices
- Easy access to connection points
- Quick and safe module connection with plug-in and coded cable sets

#### Flexible

- Horizontal or vertical DIN rail mounting
- Profile section without pitch markings for I/O cards with specific number of channels
- Can be specifically adapted for I/O cards of various automation systems with different system plug types

Select controller-specific front adapter and system cable

Solutions are also available for MINI Analog, MACX Analog Ex, and Safety

## Termination Carriers for MACX Analog Ex signal conditioners

### The TC-D37SUB-ADIO16-EX-P-

**UNI** universal Termination Carrier is a compact solution which connects signal conditioners from the MACX Analog Ex series to analog or binary input/output cards of automation systems.

### The TC-D37SUB-AIO16-EX-PS-UNI

Termination Carrier design, when combined with the MACX MCR-S-MUX HART multiplexer, also enables communication between HART-capable field devices and a management system.

- Connection of up to 16 single-channel (Ex i) signal conditioners
- Universal 1:1 signal routing to a 37-pos. D-SUB connector
- For system cables with D-SUB socket and open ends for universal connection
- Redundant supply and monitoring in separate DIN rail module

#### Notes:

Contact us: specific Termination Carrier designs for I/O modules of various automation systems are available, planned or can be implemented according to your specifications.

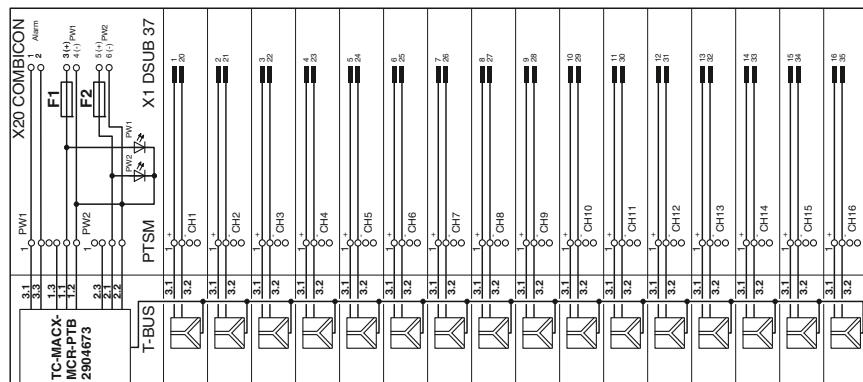

Ex:  
Housing width 242 mm

#### Technical data

General data	
Connection to the control system level	
Number of positions	37
Max. operating voltage	< 50 V DC (per signal/channel)
Max. permissible current	23 mA (signal/channel)
Rated insulation voltage	50 V
Pollution degree	2
Surge voltage category	II
Rated surge voltage	0.5 kV (basic insulation)
Clearance and creepage distances	DIN EN 50178
Ambient temperature range	-20 °C ... 60 °C (please observe module specifications)
Shock	15g, according to IEC 60068-2-27
Vibration (operation)	2g, according to IEC 60068-2-6
Dimensions W / H / D	242 / 170 / 160 mm
EMC note	Class A product, see page 625
Power supply via power module	19.2 V DC ... 30 V DC
Input voltage range	yes, decoupled from diodes
Redundant supply	Yes
Polarization and surge protection	2x 2.5 A on PCB, slow-blow (replaceable)
Fuse	
Status indication	1 x red LED (error)
Switching output	2x green LEDs (PWR1 and PWR2)
Maximum switching voltage	1 N/C contact (alarm = open) 50 V DC (0.3 A) / 30 V DC (2 A) / 33 V AC (2 A)

### Integrate analog signals safely

Integrate analog signals easily into your safety application according to the Machinery Directive. The MACX Safety Ex analog signal conditioners are certified according to EN ISO 13849-1 with performance level PL d.

Universal use for intrinsically safe circuits in all Ex zones and for all gas and dust groups, thanks to international approval package.

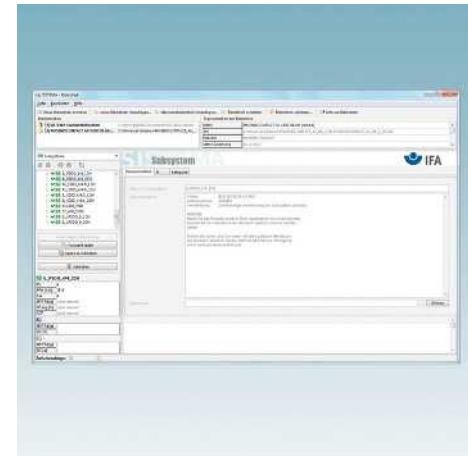

### Choose the right MACX Safety Ex signal conditioner for your application:

#### Analog IN

- 4...20 mA repeater power supplies and input signal conditioners with 2 electrically isolated outputs

#### Temperature

- Universal temperature transducers

#### Direct switching of limit values possible without an additional safety controller

- Cost savings: direct, safe switching of limit values possible without an additional safety controller
- Easy to combine active or passive analog signals with other safety modules

#### Easy planning of the safety application with SISTEMA

- Easy planning of the safety application with SISTEMA: the required data is already stored there

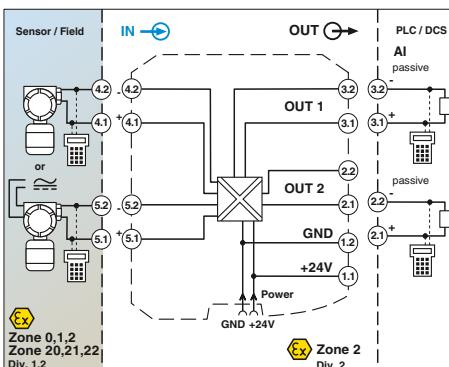

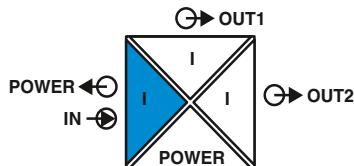

DIN rail connector-compatible

The DIN rail connector enables the modular bridging of the 24 V supply voltage.

## Ex i signal conditioners with PL and SIL functional safety - MACX Safety Ex

## Analog IN

## Ex i signal conditioners with PL and SIL functional safety - MACX Safety Ex

## Temperature

## Temperature transducer, Ex i

Universal, with limit value relay,  
wide range power supply

Functional Safety

Ex:

Housing width 35 mm

## Technical data

- Input for resistance thermometers, thermocouples, resistance-type sensors, potentiometers, mV sources, [Ex ia]
- Differential measurement possible with Pt 100
- A safety-related limit value relay, by bridging two relays
- An additional limit value relay for non-safety-related function
- PL d according to EN ISO 13849-1
- Up to SIL 2 according to IEC 61508
- Configuration via software (ANALOG-CONF or FDT/DTM)
- Cold junction compensation with separate connector
- Wide range power supply 19.2...253 V AC/DC
- Status indicators for supply voltage, cable, sensor, and module errors
- Installation in zone 2 possible
- Plug-in screw and push-in connection technology

## Multiplexers for HART signals

### Multiplexers for HART signals

Multiplexer for digital connection of HART-capable field devices (such as measuring transducers or control valves) to a PC or management system.

- Supports online configuration and diagnostics for the connected HART-capable field devices
- Constant documentation of process variables and states
- 32 HART channels per multiplexer
- Up to 128 HART multiplexers at one PC interface
- Communication via software tool (e.g. HART OPC Server) using RS-485 interface
- Electrical isolation between auxiliary energy, RS-485 bus, and the HART channels
- HART field devices are accessed at the same time that the measurement signal is transmitted without affecting measured value processing
- HART field devices connected via universal HART connection boards; direct connection if processing non-Ex signals, with separate Ex i signal isolator connected upstream if processing Ex signals
- Power supplied via HART connection board

Housing width 35.2 mm

#### Technical data

Field devices interface (HART)	16 or 32; adjustable using a switch Flat-ribbon cable, 14-pos. (inclusive) HART FSK HART Field Communication Protocol Rev. 6.0 (downward compatible up to Rev 4.0); FSK Physical Layer Specification (Rev. 8.1)
Channels	16 or 32; adjustable using a switch Flat-ribbon cable, 14-pos. (inclusive) HART FSK HART Field Communication Protocol Rev. 6.0 (downward compatible up to Rev 4.0); FSK Physical Layer Specification (Rev. 8.1)
Connection method	Flat-ribbon cable, 14-pos. (inclusive)
Signal	HART FSK
HART specification	HART Field Communication Protocol Rev. 6.0 (downward compatible up to Rev 4.0); FSK Physical Layer Specification (Rev. 8.1)
Data transmission display	Two yellow "Tx" and "Rx" "HART" LEDs
Display error	Red "ERR" LED (flashes in case of an error in the HART bus)
RS-485 interface	D-SUB-9 socket RS-485 Compatible with OPC HART server, PDM, PRM, and FDT/DTM
Connection method	D-SUB-9 socket
Signal	RS-485
Data flow control/protocols	Compatible with OPC HART server, PDM, PRM, and FDT/DTM
Number of HART multiplexers per bus segment	Max 31
Address setting	0...127; using a rotary switch at the front
Data rate	9600 / 19200 / 38400 / 57600 [bps]; via rotary switch at the front
Transmission length	≤ 1200 m
Display	Two yellow "Tx" and "Rx" "RS-485" LEDs
General data	
Supply voltage range	18 V ... 31.2 V
Nominal supply voltage	24 V DC
Current consumption	55 mA
Power consumption	1.35 W
Operating voltage display	Green "PWR" LED
Undervoltage monitoring	Yes (no faulty devices / output states)
Electrical isolation between HART signal/RS-485	350 V AC
Electrical isolation between HART signals	100 V DC (capacitive)
Electrical isolation between HART signal/supply	350 V AC
Electrical isolation between RS-485/supply	350 V AC
Error monitoring	Processor error: "PWR" LED flashes; HART communication error: "ERR" LED flashes
Ambient temperature range	-20 °C ... 60 °C
Humidity	≤ 95 % (non-condensing)
Dimensions W / H / D	35.2 / 99 / 114.5 mm
Conformance / approvals	
Conformance	CE-compliant

### Ordering data

Description	Type	Order No.	Pcs. / Pkt.
MCR temperature transducer, smart, for resistance thermometers, thermocouples, resistance-type sensors and voltage sensors	MCR-FL-HT-TS-I-EX	2864545	1

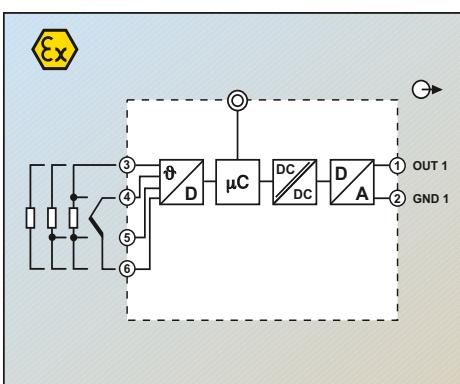

## Programmable loop-powered temperature transducer with connection heads, Ex i

- 1-channel
- Loop-powered
- Input for resistance thermometers, thermocouples, and linear mV signals, Ex ia IIC
- Output 4...20 mA/20...4 mA
- Can be installed in zone 0
- 2-way electrical isolation
- Configuration using software

### Notes:

The devices are supplied with the standard configuration: Pt 100 sensor, measuring range 0 ... 100°C, 3-wire connection.

You can implement your own measuring range settings, linearization, and characteristic curve adjustments. For this purpose, you need the MCR-PAC-T-USB programming adapter and the MCR/PI-CONF-WIN configuration software, see page 226

Loop-powered,  
programmable

### Technical data

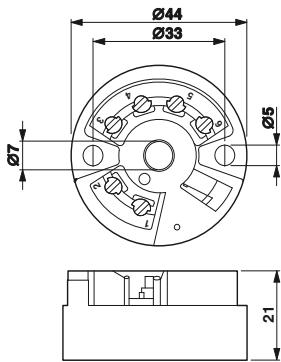

Measuring input	Pt, Ni (100, 500, 1000); min. measuring range 10 K
Resistance thermometers	B, C, D, E, J, K, L, N, R, S, T, U; min. measuring range 50 K/500 K
Thermocouple sensors	
Resistor	10 Ω ... 400 Ω (min. measuring range 10 Ω) 10 Ω ... 2000 Ω (min. measuring range 100 Ω)
Voltage	-10 mV ... 100 mV (min. measuring range 5 mV)
Configuration	Yes, programmable
Measuring output	
Output signal range	4 mA ... 20 mA / 20 mA ... 4 mA
Maximum output signal	≤ 25 mA
Load	≤ 720 Ω (For $U_V = 24$ V; $U_{\text{supply}} = 8$ V / 0.025 A)
Line monitoring	NE 43
Short-circuit current	≤ 3.6 mA or ≥ 21 mA (adjustable, not for thermocouples)
Output current with open circuit	≤ 3.6 mA or ≥ 21 mA (adjustable)
Output current, measuring range overrange/underrange	3.8 mA ... 20.5 mA (linear increase/decrease)
General data	
Supply voltage range	8 V DC ... 30 V DC
Current consumption	< 3.5 mA
Step response (10-90%)	< 2 s
Transmission error	Resistance thermometers 0.2 K (Pt 100, Ni 100), 0.5 K (Pt 500, Ni 500), 0.3 K (Pt 1000, Ni 1000)
	Thermocouple sensors Type 0.5 K (K, J, T, E, L, U), 1.0 K (N, C, D), 2.0 K (S, B, R)
	Resistance-type sensors ± 0.1 Ω (10...400 Ω), ± 1.5 Ω (10...2000 Ω)
	Voltage sensor ± 20 μV (-10...100 mV)
Test voltage input/output	2 kV AC (50 Hz, 1 min.)
Switch on delay time	6 s
Degree of protection	IP00, IP66 (integrated in the connecting head)
Mounting position	Connecting head in acc. with DIN 43729 form B
Connection	Installation in connection head according to DIN 43729 form B
Standards/regulations	NAMUR recommendation NE 21
Housing material	Polycarbonate, PC
Inflammability class in acc. with UL 94	V0
Screw connection solid / stranded / AWG	0.2 ... 1.75 mm² / 0.2 ... 1.75 mm² / 24 - 15
Safety data as per ATEX	
Max. voltage $U_i$	30 V
Max. current $I_i$	100 mA
Max. power $P_i$	750 mW
Max. voltage $U_o$	8.2 V DC
Max. current $I_o$	4.6 mA
Max. power $P_o$	9.35 mW
Gas group	IIB
- Max. external inductance $L_o$	[mH]
- Max. external capacitance $C_o$	[μF]
Max. ambient temperature	8.5    4.5 1.9    0.974
Conformance / approvals	Category 1: T4 = 60°C, T5 = 50°C, T6 = 40°C Category 2: T4 = 85°C, T5 = 70°C, T6 = 55°C
Conformance	CE-compliant

Description

MCR temperature transducer, for resistance thermometers, thermocouples, resistance-type sensors and voltage sensors

### Ordering data

Type	Order No.	Pcs. / Pkt.
MCR-FL-HT-T-I-EX	2864532	1

# MCR technology

## Ex i 2-wire field devices

### Accessories

#### Configuration software package

The **MCR/PI-CONF-WIN**

**configuration software package** is used to configure and visualize all parameters for the programmable loop-powered temperature transducers.

- For temperature transducers:  
MCR-FL-T(S)-LP-I-EX and  
MCR-FL-HT-T(S)-I-EX
- Electrically isolated
- Configuration possible during operation
- Straightforward menu interface
- Rapid programming

The computer and the measuring transducer communicate with one another via a software adapter cable and a serial interface.

#### Notes:

The software runs under the following operating systems:  
Windows NT™, 2000™, and XP™.

Ordering data			
Description	Type	Order No.	Pcs./Pkt.
<b>MCR configuration software</b> , for programming MCR-T-..., MCR-...-LP-..., MCR-...-HT-..., MCR-S-..., MCR-F-..., and MCR-PSP-... modules, CD-ROM	<b>MCR/PI-CONF-WIN</b>	2814799	1

### Accessories

#### USB adapter cable

#### Software adapter cable

For connecting the programmable MCR-/PI modules to the USB interface of a computer, the USB adapter cable

**CM-KBL-RS232/USB** can be used together with the relevant adapter cables. Programming with the MCR/PI-CONF-WIN software is supported under Windows 98™, Windows 2000™ and Windows XP™.

The following modules are supported:

- MCR-FL-T-LP-I-EX
- MCR-FL-HT-T-I-EX

Ordering data

# Monitoring

## Measuring power and energy

EMpro energy meters measure, analyze, and communicate electrical system parameters.

Monitoring software ensures efficient energy and power measurement.

Stand-alone data loggers are the complete package for decentralized data acquisition.

PSK sensors acquire the operating pressure of gaseous media.

PSK meters record compressed air consumption.

## Current measurement

PACT current transformers convert currents up to 4000 A into secondary currents of 1 and 5 A.

MCR current transducers convert currents into standard analog signals.

## Monitoring and diagnostics

The SOLARCHECK modular monitoring system is used for string monitoring in photovoltaic systems.

RCM devices provide residual current monitoring in grounded power supply systems. They detect residual currents at an early stage before they result in forced shutdown.

EV Charge Control is the charging controller used to charge electric vehicles on the AC mains according to IEC 61851-1.

EMD monitoring relays detect and indicate deviations in important system parameters at an early stage.

ETD timer relays are used for straightforward time control functions.

Diode modules, lamp testing modules, and EMG display modules allow industrial use of simple components such as diodes - with professional housing and connection technology.

# Monitoring

## Measuring power and energy

### Energy costs at a glance

Within industry, energy is viewed as a variable cost factor. As a result, lower energy costs are becoming increasingly important in terms of providing companies with a major competitive advantage in the areas of production, process, and industrial engineering.

Alongside energy consumption, the quality of the energy supplied, the reliability of supply, and effective system utilization also play an important role in ensuring profitability. This calls for continuous measurement and analysis of all sources of energy.

### Advantages of energy data acquisition

Continuously recorded energy flow provides the basis for a target-oriented energy management system.

Access comprehensive information regarding the characteristic electrical data of your machinery and benefit from the advantages of this:

- Reduce your energy costs by identifying potential energy savings.
- Optimize your system capacity: through intelligent switching of system parts, uniform network load, and reduced harmonics.
- Reduce peak loads using forward-looking trend calculation and load management.
- Safeguard your production processes and minimize downtimes by continuously monitoring important system parameters.

### Measurement – monitoring – communication

Efficient energy management – network-capable EMpro energy meters can be used to acquire and monitor the characteristic electrical data of your machines and systems.

They can be freely extended with communication modules and function modules, enabling your energy meters to keep pace with your growing requirements. Future-proof planning and investment is therefore ensured.

### The communication expert

The EMpro MA600 is capable of performing all measurement tasks associated with power supply applications up to 700 V AC.

- From simple current and power measurement to the detection of harmonics including spectral analysis
- Flexible integration into Ethernet, PROFIBUS or RS-485 networks
- Remote access via web server
- Optional DIN rail adapter for DIN rail mounting
- Can be extended with communication modules and function modules

### The universal solution on the front panel

The EMpro MA400 performs standard measuring tasks up to 519 V AC.

- Optional DIN rail adapter for DIN rail mounting
- Communication module for integration into RS-485 networks (Modbus/RTU)
- Function module for pulse or alarm output

### The measuring device with RS-485 communication

The EMpro MA250 performs standard measuring tasks up to 519 V AC.

- DIN rail device
- With pulse or alarm output
- Integrated RS-485 communication (Modbus/RTU)

### The measuring device with pulse output

The EMpro MA200 is ideal for simple measuring tasks up to 519 V AC.

- DIN rail device
- With pulse or alarm output

### Software for usage data acquisition

In conjunction with a 100-series modular controller, the EMwise software from Phoenix Contact is the efficient solution for recording energy data related to heat, cold, air, or electricity. You can therefore keep an eye on your resources at all times and efficiently manage their use in your machines and systems.

### Sensors and meters

Use of resources at a glance - determine all relevant states using sensors and meters.

- Detailed procurement measurement, thanks to precise sensor and meter technology
- Intelligent sensor communication, thanks to IO-Link technology

### Inline power measurement terminal

The Inline power measurement terminal enables analysis of AC networks.

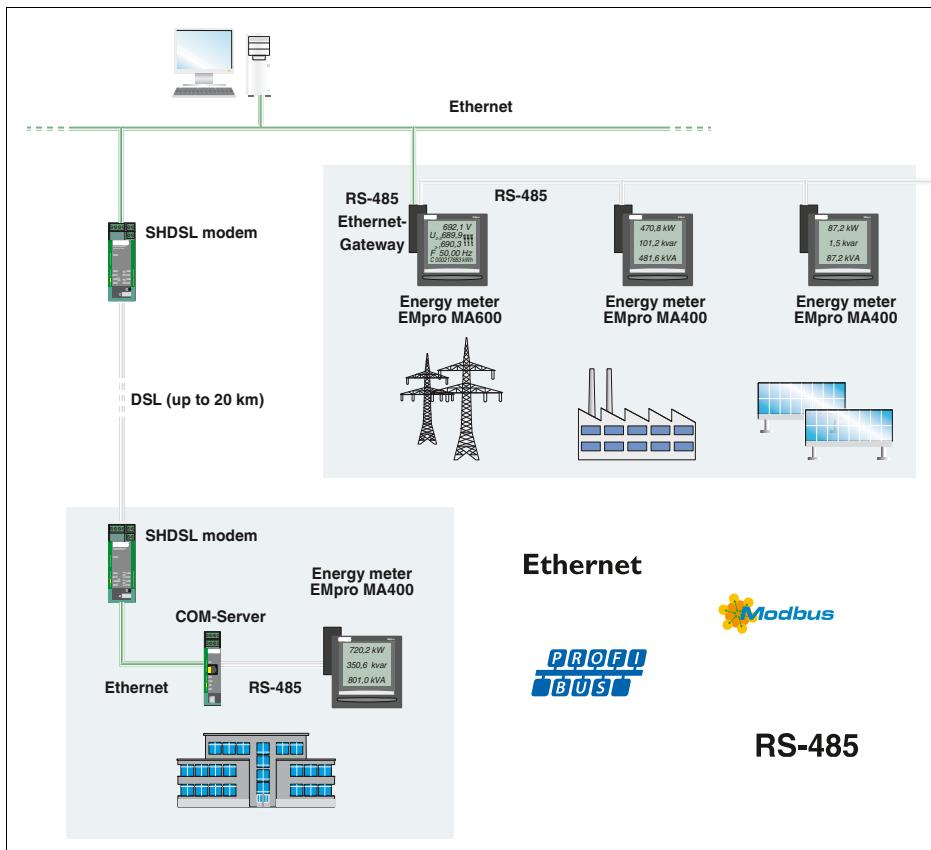

- For measuring current, voltage, and power, as well as identifying distortion and harmonics

The power measurement terminal can be found in Catalog 8, Control technology, I/O systems, and network structure.

# Monitoring

## Measuring power and energy

### Energy meters

### Direct access to measured values

Analyze your system parameters quickly on site. At the touch of a button, you can access precisely those measured values that are of relevance.

You can also use the user-friendly web server function to request measured values directly from the control center.

### Planning reliability and investment security

EMpro extension modules, function modules, and communication modules enable you to remain flexible and extend your EMpro measuring devices at any time:

- Digital inputs and outputs
- Pulse outputs
- Analog outputs
- Communication interfaces
- Measured mass storage
- Temperature measurement

### Measurement – monitoring – communication

In order to achieve efficient energy management, all energy data that has been determined is acquired and analyzed centrally in the control center.

For data transmission, integrate the EMpro measuring devices flexibly into your network structures.

The network components from Phoenix Contact offer interference-free and high-performance communication of energy data, even in harsh industrial environments:

- Copper-based and fiber optic data transmission
- Ethernet and modem communication
- Industrial wireless transmission

### Remote access to multiple meters - with just one IP address

The web server that has been integrated into the Ethernet communication modules allows you to conveniently configure key parameters online. It also allows remote access to key electrical characteristics such as current, voltage, power, energy, and harmonics.

**Selection guide**

You can easily select the right device for your application by referring to the table below:

# Monitoring

## Measuring power and energy

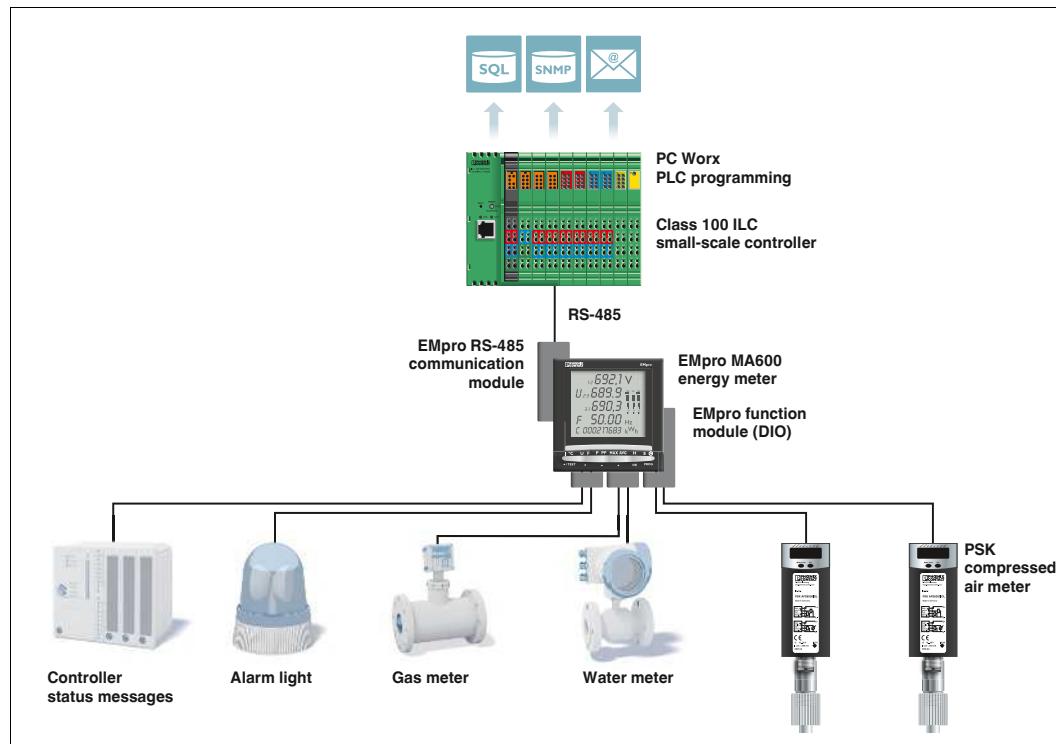

Transmit electrical characteristics wirelessly and easily

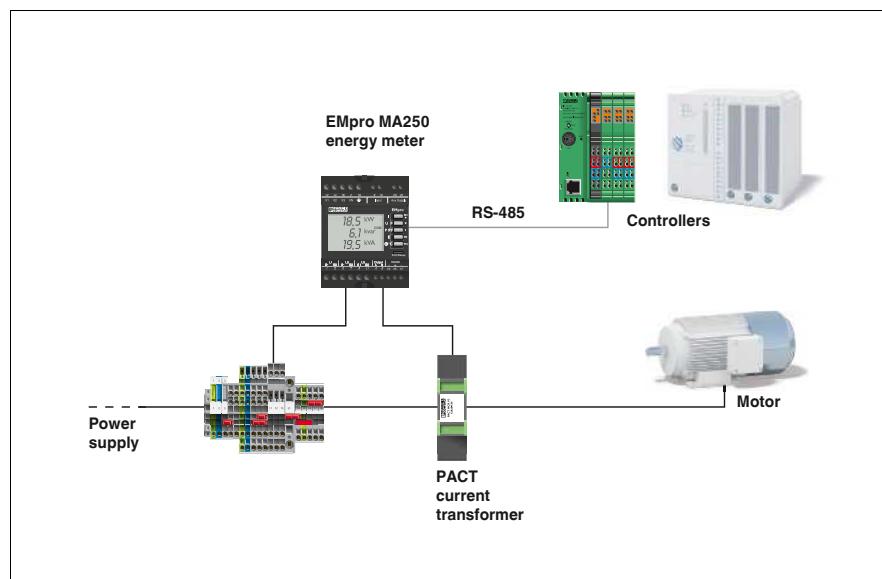

Direct connection from the PC to the EMpro MA600

**Connect up to six external meters to one EMpro MA600**

**Easy machine monitoring - communicate electrical characteristics via Modbus/RTU**

# Monitoring

## Measuring power and energy

### Energy meters

EMpro energy meters are capable of acquiring, monitoring, and displaying all electrical system and machine parameters locally.

#### EEM-MA600

- Can be extended with function and communication modules
- Remote access via web server, integrated into Ethernet communication module
- Acquisition of individual harmonic components up to 63rd order
- Trend calculation for real and reactive power

#### EEM-MA400

- Can be extended with output module
- Can be extended with RS-485 communication module (JBUS/MODBUS)
- Acquisition of total harmonic content up to 51st order

#### EEM-MA250

- Two-tariff measurement via digital input
- Pulse or alarm output
- RS-485 interface (JBUS/MODBUS)

#### EEM-MA200

- Two-tariff measurement via digital input
- Pulse or alarm output

#### EEM-MKT-DRA

- DIN rail adapter for the EEM-MA600 and EEM-MA400 front panel devices see page 243.

#### Notes:

The EEM-MA600-24DC energy meter (Order No. 2902352) is not CE-compliant.

Measuring voltage up to 700 V AC, can be extended with function and communication modules

### Function module

Plug-in function module for the EEM-MA600 energy meter.

#### EEM-MEMO-MA600

- Stores P (+/-) and Q (+/-) with an internal or external synchronization pulse of 5, 8, 10, 20, 30 or 60 minutes, e.g., synchronization pulse of 15 minutes over 45 days
- Stores the last ten alarms with time stamp (2DIO function module necessary)
- Stores the last smallest and largest instantaneous values for voltages, currents, frequency, actual power, reactive power, entire harmonic distortion
- Stores the mean values of the cable voltage, line to line voltage and frequency (maximum 60 days)
- Stores undervoltage, surge voltage, and phase failure
- Cannot be combined with PROFIBUS communication module

## Measuring power and energy

### Software for usage data acquisition

The EMwise software from Phoenix Contact is the efficient solution for acquiring energy data regarding heat, cold, air or electricity in conjunction with a compact controller.

Integrate up to 24 digital inputs, 8 analog channels, 50 EMpro energy meters, 30 M-bus counters, and 4 IO-Link measuring sensors.

A web-based interface is available for system parameterization. Each device/channel can be configured individually, without any programming knowledge. The configuration is saved to a file and can be reused for identical systems.

#### Your advantages:

- Startup without programming knowledge
- Direct parameterization of predefined sensors

#### Three software versions, suitable for every application:

- EMWISE IMPULS: for up to 16 digital signals
- EMWISE IMP ANALOG: for up to 16 digital and 6 analog signals
- EMWISE EXTENDED: for up to 24 digital and 8 analog signals, EMpro energy meters, M-bus counters, M-bus level converters, IO-Link sensors

Monitoring software

## Complete packages for data logging

new

The PSK RTU 50 is a multifunctional RTU (Remote Telemetry Unit), which combines the functions of a data logger, gateway, and alarm manager. The PSK RTU 50 offers various communication options, was developed with low power technology and allows independent operation, e.g., with batteries or solar cells.

**Your advantages:**

- GSM/GPRS modem
- Ethernet interface
- IEC 60870-5-101
- IEC 60870-5-104
- Modbus/RTU

# Monitoring

## Measuring power and energy

### Compressed air meters

#### Compressed air meters

Use meters from Phoenix Contact to monitor the use of compressed air, an expensive production resource. By using compressed air efficiently, you can decrease compressor usage and therefore reduce energy costs. The calorimetric measuring procedure records even the smallest consumption rates. You can therefore detect wear or leaks based on the amount of air consumed.

#### Use compressed air meters to acquire the following values:

- The current volumetric flow according to ISO 2533 and DIN 1343
- The total volume used
- The temperature of the compressed air in the monitored operating processes

#### The compressed air meters impress thanks to their:

- Detailed reference measurement with flow rate, total volume, and temperature display
- Intelligent sensor communication, thanks to IO-Link technology
- A measuring range from 0.06 Nm<sup>3</sup>/h to 700.0 Nm<sup>3</sup>/h
- Flexible use, thanks to IP65 protection: resistant to dust and splash water

Compressed air meter up to 75 Nm<sup>3</sup>/h

## Measuring power and energy

### Pressure sensor

#### Pressure sensor with IO-Link

Pressure sensors from Phoenix Contact detect the operating pressure of gas media in a range from -1 to 10 bar. The overload-proof ceramic measuring cell is designed for in excess of 100 million cycles and enables a high switching point accuracy. The pressure switch offers the option of using the set switching points via two switching outputs or reading all process data via the IO-Link interface.

#### Your advantages:

- IO-Link communication
- Parameterization, diagnostics, and process value monitoring via IO-Link
- Programmable function
- 4-character alphanumeric display

 **IO-Link**

Pressure sensor up to 10 bar

Technical data	
Pressure monitoring	-1 bar ... 10 bar (minimum burst pressure 150 bar)
Measuring range	75 bar
Pressure resistance	G1/4 I
Process connection	M12 connector
Supply for module electronics	4
Connection method	18 V DC ... 36 V DC
No. of pos.	< 35 mA
Supply voltage range	
Current draw	
Digital outputs	2 (OUT1 = switching output, OUT2 = switching output or diagnostic output)
Number of outputs	M12 connectors, assigned four times
Connection method	0.3 s (operational readiness)

## Current measurement

### Extremely versatile

PACT current transformers offer a complete product range for converting alternating currents up to 4000 A into secondary currents of 1 A and 5 A. Depending on requirements, bus-bar, plug-in, and winding current transformers are available. PACT current transformers are available in different transformation ratios, accuracy classes, and rated powers - in 3000 versions, for your current measurement requirements.

### Also available for higher accuracy classes

For standard applications, such as in machine building or systems manufacturing, Phoenix Contact offers current transformers with accuracy classes 0.5 and 1 in a version that cannot be calibrated.

For higher accuracy or for billing purposes in energy supply, type-tested transformers that can be calibrated as well as calibrated transformers are available - with classes 0.2/0.2S/0.5 and 0.5S.

### Fast and secure installation

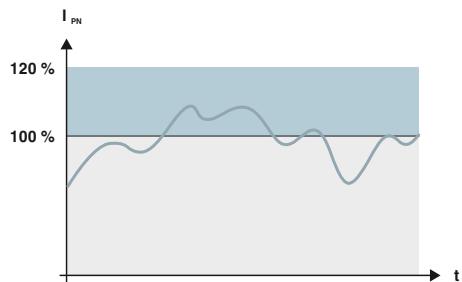

The current transformer quick-action mechanism offers the following advantages:

- Tool-free mounting
- Considerable reduction in installation time
- Easy handling and secure fastening by pressing with finger
- Current transformers align themselves – no need for subsequent alignment

### Variable and space-saving mounting

In addition to the vertical and horizontal mounting position, the optional accessories offer further installation options such as mounting on the DIN rail or on the control cabinet panel.

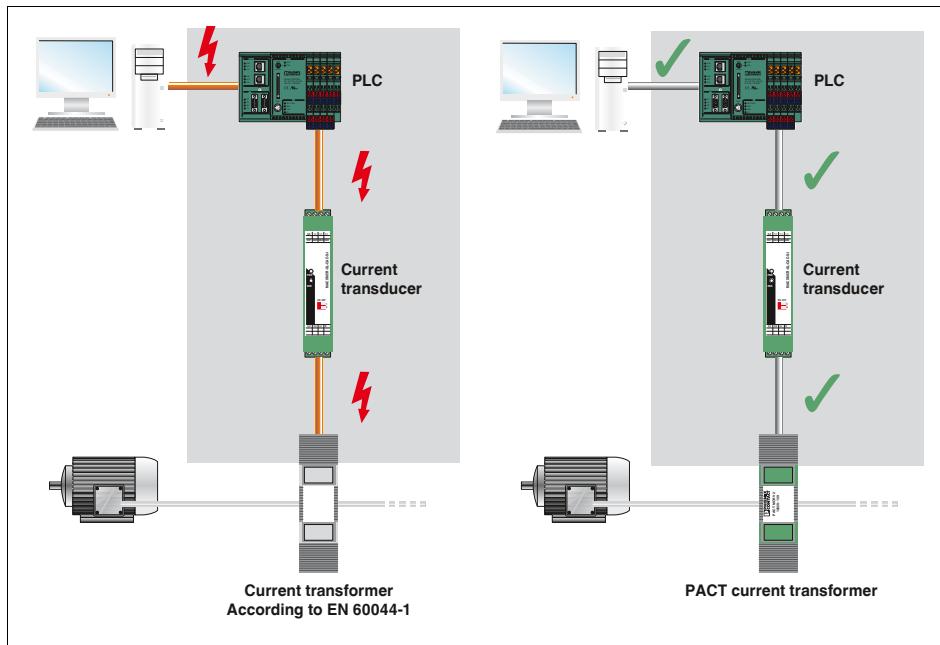

All PACT current transformers are just 30 mm wide. This saves space – for example flat mounting when measuring branch outlets.

### Safe detection of current peaks

PACT current transformers can be used to safely detect current peaks greater than the rated nominal current strength – without resulting in any damage: the transformers are designed for a continuous thermal nominal current that is 120% of the primary rated current strength.

Example: a PACT transformer with a specified rated power of 10 VA does indeed deliver 14.4 VA on a continual basis.

### Safe isolation

PACT current transformers are manufactured in accordance with EN 50178. This is relevant for electronic equipment for use in power installations.

EN 50178 differs considerably from EN 60044, the usual standard for transformers, with regard to safety.

Your advantages:

- PACT current transformers offer safe isolation, thanks to greater clearance and creepage distances.
- PACT current transformers ensure that there is no sparkover on the secondary side of the transformer and human life is protected inside and outside the control cabinet.
- Up to 1000 V (L-N) operating voltage possible
- Routine testing with 12 kV (1.2/50 µs)
- Surge voltage category 3 is met

# Monitoring

## Current measurement

### Current transformer selection guide

- Complete range consisting of winding, bus-bar, and window-type current transformers
- Popular types available from stock; alternatively, order key can be used for custom dimensioning
- Versions available to support official calibration

### Selection

- Select your transformer in accordance with the dimensions of the copper rail
- Specify the four electrical characteristics of the transformer:

#### 1. The primary rated current strength $I_{pn}$

**strength  $I_{pn}$**  - the maximum amperage occurring in the path to be measured

#### 2. The secondary rated current $I_{sn}$

– supplied to the downstream measuring devices

#### 3. Class

- accuracy for adherence to the specified tolerances

#### 4. Rated power $S_n$ [VA]

- takes account of all the loads occurring in the measuring circuit

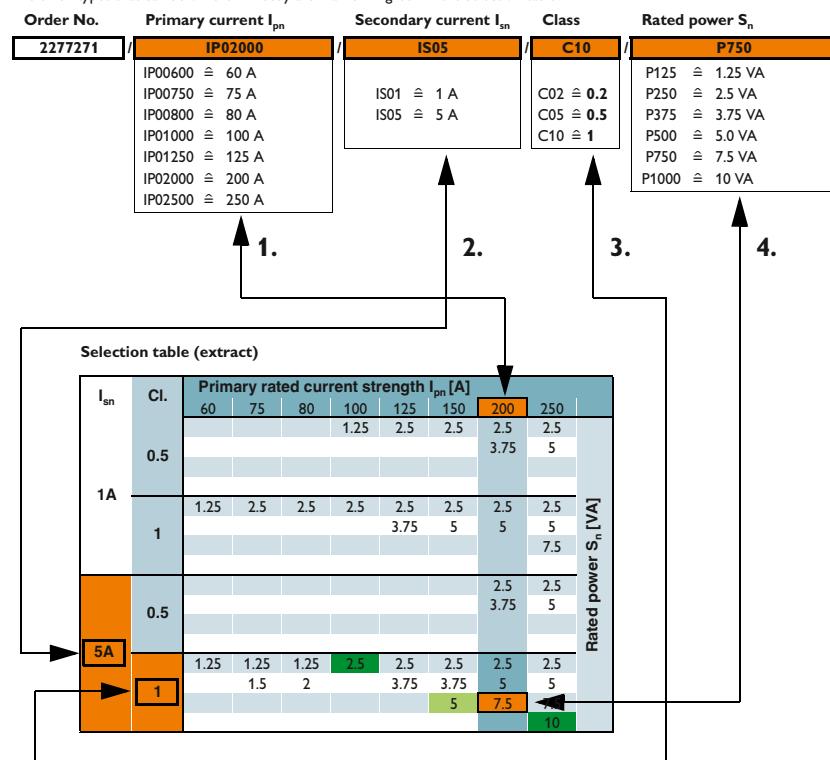

Input data		Technical data	
Thermal rated short-time current	$I_{th} = 60 * I_n$		
Rated surge current	$I_{dyn} = 2.5 * I_{th}$		
Rated frequency	50 Hz ... 60 Hz		
Surge current limitation factor	FS 5		
General data			
Rated insulation voltage	1 kV		
Test voltage	3 kV (50 Hz, 1 min.)		
Impulse withstand voltage	12 kV (1.2 / 50 µs)		
Insulating material class	E		
Connection capacity of secondary terminals	2 x (2.5 x 4) mm		
Ambient temperature (operation)	-25 °C ... 40 °C		
Standards/regulations	IEC 60044-1, EN 50178		
Housing material	Polyamide PA fiberglass reinforced		

### Calculation guide

Determination of the secondary side rated power $S_n$		
All the occurring loads must be added:		
– Calculate the power requirement of the copper cable (forward and return line)		
– Take into account the power requirement of the connected devices (measuring devices)		
– Add a reserve requirement		
$S_n$ total = $S_n$ copper cable + $S_n$ measuring device + $S_n$ reserve		
Power requirement of copper cables with a different diameter		
Conductor cross section in mm²		Rated power in VA/m (consider the forward and return line)
		Secondary current $I_{sn}$ 5 A Secondary current $I_{sn}$ 1 A
1.5	0.2917	0.0117
2.5	0.1750	0.0070
4	0.1094	0.0044
6	0.0729	0.0029
Example: $S_n$ copper cable = cable length x 2 x rated power $S_n$ copper cable = 10 m x 2 x 0.1750 VA/m = 3.50 VA		
$S_n$ measuring device = 2 VA		
$S_n$ reserve < 0.5 x ( $S_n$ copper cable + $S_n$ measuring device) $S_n$ reserve = 2 VA		
$S_n$ total = $S_n$ copper cable + $S_n$ measuring device + $S_n$ reserve $S_n$ total = 3.5 VA + 2 VA + 2 VA = 7.5 VA		

### Order key - example for PACT MCR-V2-3015-60

Preferred types that can be ordered directly are marked in green in the selection table.

## Current transformers

### PACT MCR-V1-21-44

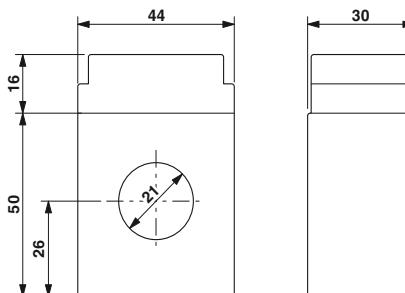

- Primary rated current  $I_{pn}$ :  
0...500 A
- Circular conductor dimensions: Ø 21 mm

#### Notes:

Our configurator, which is available at [phoenixcontact.net/products](http://phoenixcontact.net/products), makes ordering easy.

Current transformers that support official calibration: to specify the type of current transformer you require, please use the order key on page 264

The relevant installation accessories can be found on page 263

**Bus-bar curr. transf.,  
official calibration as an option**

## Current transformers

### PACT MCR-V2-8015-105

- Primary rated current  $I_{pn}$ :  
0...(400...2500) A
- Circular conductor dimensions: Ø 61 mm
- Rail dimensions:  
80x15 mm; 2x 60x10 mm; 3x 50x10 mm

Window-type curr. transformer,  
official calibration as an option

### PACT MCR-V2-8020-105

- Primary rated current  $I_{pn}$ :  
0...(500...2000) A
- Circular conductor dimensions: Ø 70 mm
- Rail dimensions:  
2x 80x10 mm; 60x60 mm

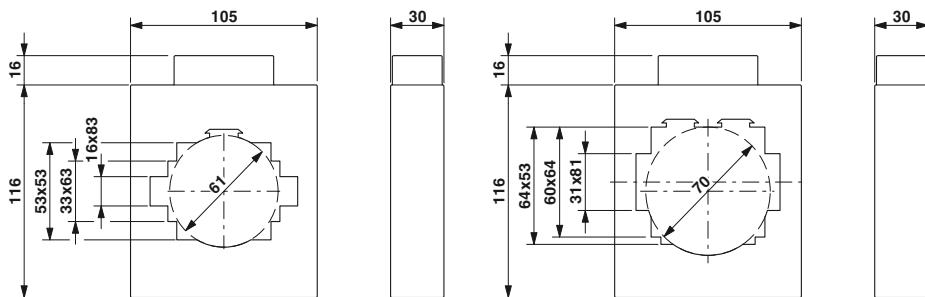

Window-type curr. transformer,  
official calibration as an option

#### Notes:

Our configurator, which is available at [phoenixcontact.net/products](http://phoenixcontact.net/products), makes ordering easy.

Current transformers that support official calibration: to specify the type of current transformer you require, please use the order key on page 265

The relevant installation accessories can be found on page 263

## Accessories

### Quick-action mechanism for PACT current transformers

- No tools necessary for mounting
- Extremely easy handling, thanks to secure fastening by pressing with finger
- Set consisting of two fixing pins and a holding latch

#### Notes:

The 16 mm wide quick-action mechanism can also be used for larger current transformers if the length of the fixing pins is sufficient.

## Current measurement

### Fast installation in a confined space

PACT RCP current transformers for retrofitting can be conveniently mounted where there is not enough space for split core current transformers. System downtimes are reduced as system parts do not have to be removed for installation.

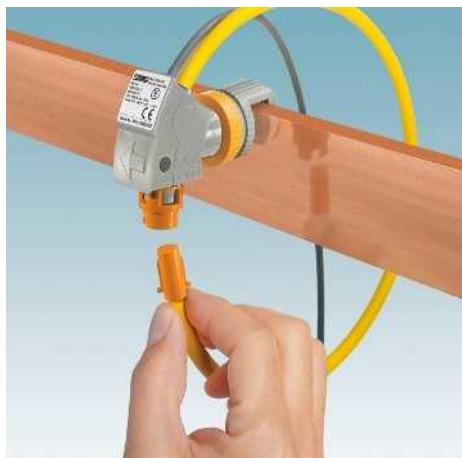

#### Your advantages:

- High system availability due to reduced downtimes: fast installation without removing system parts
- Safe installation and operation: no dangerous open circuit voltages
- No magnetic saturation
- High linearity, even at high currents
- Responds to fast current changes
- The coil is protected against electromagnetic interference
- The current can rise up to the short-circuit current without necessarily destroying the coil
- High nominal insulation voltage

### Professional holding device for busbars

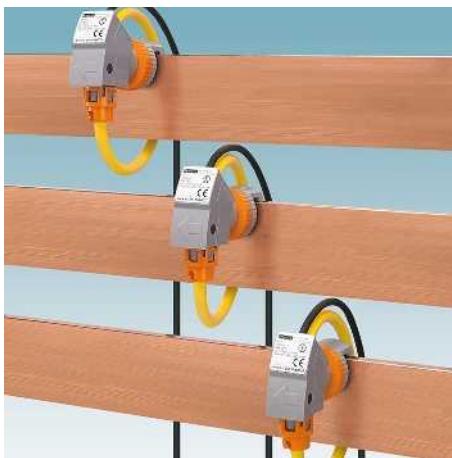

The PACT RCP-CLAMP holding device offers the following advantages:

- Suitable for industrial applications
- Steel bracket ensures permanent fixed seating at high busbar temperatures
- Designed for rails with a thickness of 10 ... 15 mm
- Rogowski coil is snapped onto the fixing element
- Rogowski coil has a safe and defined place on the busbar
- Rogowski coil can be rotated in 15° increments for optimum alignment.
- PACT RCP avoids direct contact of the measuring coil with its own or adjacent busbar
- This allows installations on warm busbars to remain under control

### Easy and safe installation

Simply place the handy Rogowski coil quickly around power rails and circular conductors. The measuring transducer connected downstream supplies the same typical secondary currents as a standard current transformer.

### Fast installation in a confined space

PACT RCP current transformers save space and are handy as the size and weight of the Rogowski coil are not dependent on the amperage and unlike split core current transformers, remain the same.

### One measuring system for all amperages

Acquire alternating currents up to 4000 A using a single coil type. Rogowski coils are available in three different lengths for optimum adjustment to the busbar and circular conductor dimensions.

### Eight current measuring ranges

The measuring transducer connected downstream supplies the same typical secondary currents as a standard current transformer. Choose between eight different current measuring ranges via DIP switches. For optimum measuring accuracy, compensate for the different coil lengths by simply using a potentiometer.

### Detect harmonics and transients

PACT RCP current transformers for retrofitting cover a large frequency range from 10 to 5000 Hz. You can therefore measure harmonics and transients with phase accuracy.

### Safe seating

The optional holding device ensures safe seating and optimal alignment of the coil even on very hot busbars. If the gap between the busbars is very small, simply turn the coil diagonally to avoid touching other rails.

# Monitoring

## Current measurement

### Current transformers for retrofitting

#### PACT RCP

- Practical handling due to the flexible measuring coil for opening
- Universal application possibilities through 8 different current measuring ranges in one device: (0 ... 100 / ... / ... /4000 A)
- The large bandwidth (10...5000 Hz) enables harmonics and transients to be detected
- It is not possible for dangerous open circuit voltages to occur
- The bracket ensures optimum alignment of the measuring coil to the power rail
- Low space requirement in the control cabinet

Current transformer for subsequent installation in the field

#### Technical data

Measuring coil input data	
Frequency range	10 Hz ... 5000 Hz
Input signal	Sine
Position error	< 1 %
Measuring coil signal output	
Output signal (at 50 Hz)	100 mV (no load, at 1000 A)
General data, measuring coil	
Length of signal cable	3000 mm
Rated insulation voltage	1000 V AC (rms CAT III) 600 V AC (rms CAT IV)
Test voltage	10.45 kV (DC / 1 min.)
Ambient temperature (operation)	-30 °C ... 80 °C (measuring coil)
Ambient temperature (storage/transport)	-40 °C ... 90 °C (measuring coil)
Measuring transducer input data	
Measuring ranges (current) via DIP switch	100 A, 250 A, 400 A, 630 A, 1000 A, 1500 A, 2000 A, 4000 A
Phase angle	< 1 °
Measuring transducer signal input	
Input signal (at 50 Hz)	100 mV (1000 A)
Measuring transducer signal output	
Current output signal	0 A AC ... 1 A AC (effective at sine)
Miscellaneous data for measuring transducer	
Nominal supply voltage	24 V DC -20 % ... +25 %
Nominal supply voltage range	19.2 V DC ... 30 V DC
Transmission error, maximum	≤ 0.5 % (of range final value)
Linearity error	< 0.5 % (of range final value)
Frequency range	45 Hz ... 65 Hz
Degree of protection	IP20
Test voltage	1.5 kV AC (supply/input and output: 50 Hz, 1 min)
Dimensions W / H / D	22.5 / 70.4 / 85 mm
Ambient temperature (operation)	-20 °C ... 70 °C (measuring transducer)
Ambient temperature (storage/transport)	-25 °C ... 85 °C (measuring transducer)
General data for the set	
Altitude	< 2000 m
Permissible humidity (operation)	5 % ... 95 % (non-condensing)
Approvals / conformities	
Standards/specifications	IEC 61010-1 IEC 61010-031 IEC 61010-2-031 IEC 61010-2-032

## Current measurement

### With flexible power supply – current transducers up to 12 A AC

Active current transducers convert sinusoidal alternating currents up to 12 A. The integrated wide range power supply unit enables use in various different countries.

### With hinged Rogowski sensor – current transducers up to 200 A AC

The AC current transducers measure sinusoidal and non-sinusoidal alternating currents up to 200 A. The hinged Rogowski sensor ensures very easy installation, as cables that are to be measured do not have to be isolated. This enables mounting to be carried out without interruptions.

### Limit value monitoring with the current protector

At the current protector, a desired amperage is specified at which a PDT contact switches a load on or off.

### Flexible signal conditioning – current transducers up to 55 A AC/DC

Current transducers up to 55 A offer an infinitely adjustable measuring range. This range is mapped over the entire output signal range. This ensures extremely accurate resolution of measured values. Basic configuration can be performed quickly via the DIP switches. Additional useful device functions can be set via the software.

### For high currents – current transducers up to 600 A AC/DC

The universal current transducers are the ideal solution for measuring high currents with any waveform up to 600 A AC/DC. The product range offers various different devices in graded measuring ranges with current or voltage output.

#### For sinusoidal alternating currents up to 12 A

- 3-way electrical isolation
- Wide range version from 19.2 ... 253 V AC/DC
- Voltage bridging with DIN rail connector
- Input/output can be configured via DIP switches
- Suitable for potentially explosive areas, thanks to ATEX approval for Ex zone 2

#### For sinusoidal and non-sinusoidal alternating currents up to 200 A

- Distorted alternating currents up to 6000 Hz can be also acquired, thanks to true r.m.s. value measurement (RMS)
- Uninterrupted installation and lossless current measurement thanks to hinged Rogowski sensor
- Measuring range selection with slide switch

#### Limit value monitoring

The current protector converts sinusoidal alternating currents to binary switching signals.

- Switching point can be freely selected in the measuring range of 0 ... 16 A AC
- Changeover relay output
- Adjustable switch hysteresis
- 3-way isolation
- Operating current/quiescent current behavior can be set

#### With flexible measuring ranges for all waveforms up to 55 A

- Lossless true r.m.s. value measurement without shunt via Hall sensor (TRMS)
- Optimum mapping of the measuring range up to 55 A, thanks to software-programmable upper and lower limits
- Limit value alarm in the event of threshold value overrange or underrange up to 55 A – via relay or transistor output

#### For high currents – current transducers up to 600 A AC/DC

- Lossless true r.m.s. value measurement without shunt via Hall sensor (TRMS)
- Compact dimensions also enable distributed use
- Variable mounting on DIN rail and mounting plate
- COMBICON plug-in connection terminal blocks
- 3-way isolation
- For a conductor diameter of up to 32 mm

# Monitoring

## Current measurement

### Current transducers for AC/DC and distorted currents

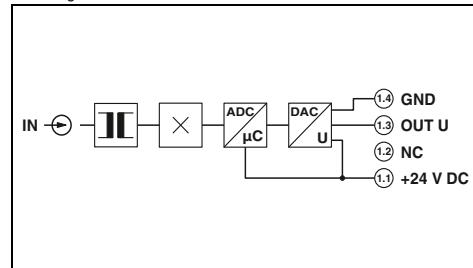

The **MCR-SL-CUC-...** current transducers measure DC, AC, and distorted currents of 0 ... 600 A.

- Universal current measurement, no shunt required
- Compact dimensions also enable distributed use
- Variable mounting on DIN rail and mounting plate
- Simple connection method thanks to COMBICON plug-in connection terminal blocks
- 3-way isolation

For DC, AC, and distorted currents of  
0 ... 300 A,  
voltage output

  
Housing width 90 mm

#### Technical data

Input data	
Frequency range	20 Hz ... 6000 Hz (0 Hz)
Curve type	AC, DC or distorted currents
Connection method	Cable design: 32 mm diameter
Output data	
Output signal	0 ... 10 V
Maximum output signal	
Load $R_L$	$\geq 10 \text{ k}\Omega$
General data	
Supply voltage $U_B$	20 V DC ... 30 V DC
Maximum transmission error	$<\pm 1\%$ (of final value)
Temperature coefficient	typ. 0.02 %/K (0 ... 60°C) 0.04 %/K (-40 ... 65°C)
Step response (10-90%)	150 ms
Safe isolation	acc. to EN 61010
Rated insulation voltage	300 V AC
Surge voltage category / pollution degree	III / 2
Degree of protection	IP20
Ambient temperature range	-40 °C ... 65 °C

## Current measurement

### Current transducers for AC/DC and distorted currents

The **MCR-S-...-UI(-SW)-DCI** current transducers measure direct, alternating, and distorted currents.

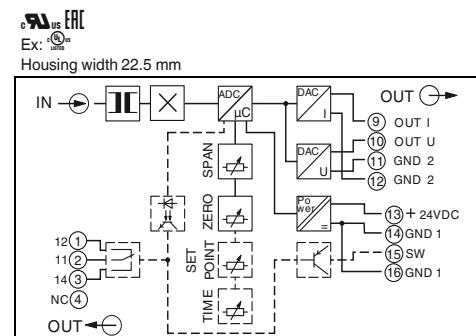

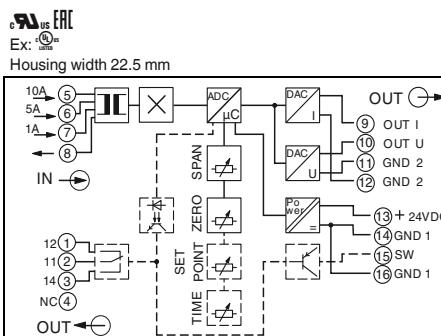

- Device can be set via DIP switches or MCR/PI-CONF-WIN configuration software
- True r.m.s. value measurement
- 3-way isolation
- With optional relay and transistor output

**For DC, AC, and distorted currents  
0 ... 11 A**

**For DC, AC, and distorted currents  
0 ... 55 A**

Notes:	
To order a configurable product, enter the required configuration by referring to the adjacent order key.

## AC current transducers, sinusoidal and distorted

The MCR-SL-S-...00... current transducers measure sinusoidal and non-sinusoidal alternating currents within the range 0 ... 200 A.

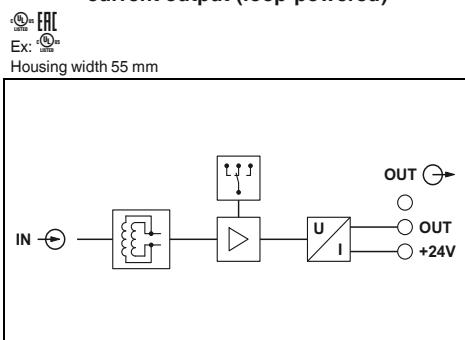

- True r.m.s. value measurement from 30...6000 Hz
- Measuring range selection with slide switch
- Loop-powered
- Can be retrofitted with the hinged Rogowski coil

For sinusoidal and non-sinusoidal alternating currents, 0 ... 200 A, voltage output

For sinusoidal and non-sinusoidal alternating currents, 0 ... 200 A, current output (loop-powered)

## AC current protector, sinusoidal

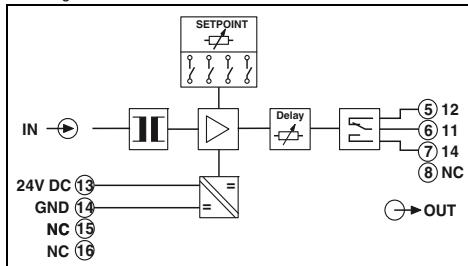

The **MCR-SL-S-16-SP-24** current protector converts sinusoidal 50 Hz/60 Hz alternating currents into binary switching signals.

- Switching point can be freely selected in the measuring range of 0...16 A AC
- Changeover relay output
- Adjustable switch hysteresis
- 3-way isolation
- Operating current/quiescent current behavior can be set

For sinusoidal alternating currents,  
0 ... 16 A AC

Housing width 22.5 mm

### Technical data

#### Input data

Input current	0 A AC ... 16 A AC
Frequency range	45 Hz ... 65 Hz
Curve type	Sine
Overload capacity	2 x $I_N$ (continuous)
Connection method	Through connection, diameter 4.2 mm
Switching output	Relay output
Contact type	1 PDT
Contact material	AgSnO, hard gold-plated
Max. switching current	50 mA (for gold layer, 30 V AC/ 36 V DC)
Switching hysteresis	2 A (in case of a destroyed gold layer, 250 V AC)
Response delay	Adjustable using a DIP switch (0.5 %, 5 %, 10 %, 15 %)

#### Operating and closed-circuit current behavior

Relay status display	typ. 0.1 s ... 10 s (adjustable using a potentiometer)
General data	Adjustable using a DIP switch Yellow LED (relay active)

#### General data

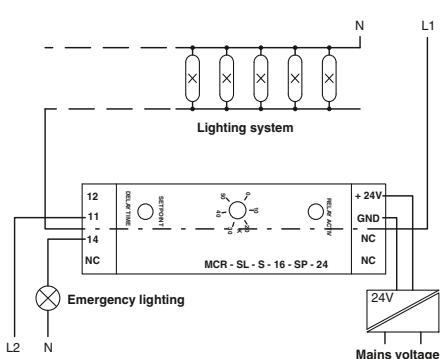

Supply voltage $U_B$	20 V DC ... 30 V DC
Current consumption	< 30 mA
Setting accuracy	< 0.5 %
Temperature coefficient	< 0.02 %/K
Step response (10-90%)	40 ms
Safe isolation	acc. to EN 50178, EN 61010-1
Rated insulation voltage	300 V AC (to ground)
Surge voltage category / pollution degree	III / 2
Test voltage input/output	4 kV (50 Hz, 1 min.)
Test voltage input/power supply	4 kV (50 Hz, 1 min.)
Degree of protection	IP20

#### Ambient temperature range

Dimensions W / H / D	-20 °C ... 65 °C

## Current measurement

### Accessories

#### Configuration software package

##### The MCR/PI-CONF-WIN

**configuration software package** is used to configure and visualize all parameters for the programmable MCR measuring transducers.

- Straightforward menu interface
- Rapid programming

##### Notes:

The software runs under the following operating systems:  
Windows NT™, 2000™, and XP™.

For MCR-S... current transducer

Ordering data			
Description	Type	Order No.	Pcs. / Pkt.
MCR configuration software, for programming MCR-T-..., MCR-...-LP-..., MCR-...-HT-..., MCR-S-..., MCR-F-..., and MCR-PSP-... modules, CD-ROM	MCR/PI-CONF-WIN	2814799	1
Accessories			
Labels, for marking MCR-T and MCR-S modules, four sheets DIN A4 marking labels (112 pieces.)	MCR-ET 38X35 WH	2814317	1

## USB adapter cable

### Software adapter cable

The following adapter cables are available for programming the MCR-S... current transducers:

- USB adapter cable
- Software adapter cable

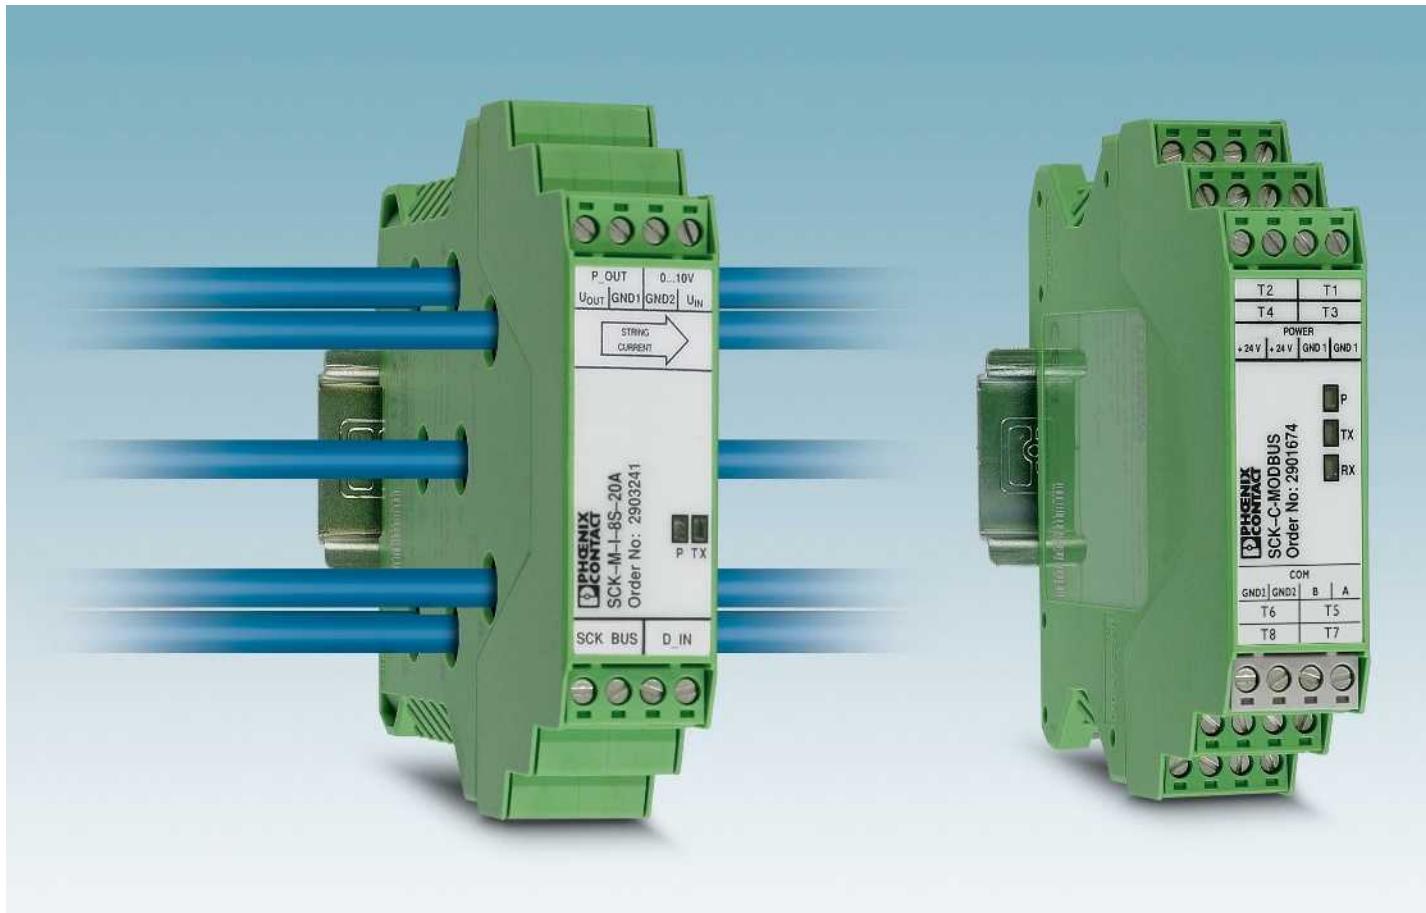

For MCR-S... current transducer

Ordering data			
Description	Type	Order No.	Pcs. / Pkt.
USB adapter cable, D-9-SUB to USB, with adapter D-9-SUB to D-25-SUB	CM-KBL-RS232/USB	2881078	1

Adapter cable, flexible, 9-pos. D-SUB socket to 25-pos. D-SUB pin	PSM-KAD 9 SUB 25/BS	2761295	1

# Monitoring

## Monitoring and diagnostics

### Utilize solar electricity efficiently

Detect errors – increase efficiency: photovoltaic systems should achieve maximum energy yield within the shortest possible time.

SOLARCHECK provides reliable information regarding the performance of your photovoltaic system. It can be used to detect faults, which may be caused by damaged panels, defective contacts or damage in the cabling. This allows you to implement countermeasures quickly, thereby increasing the efficiency of your system.

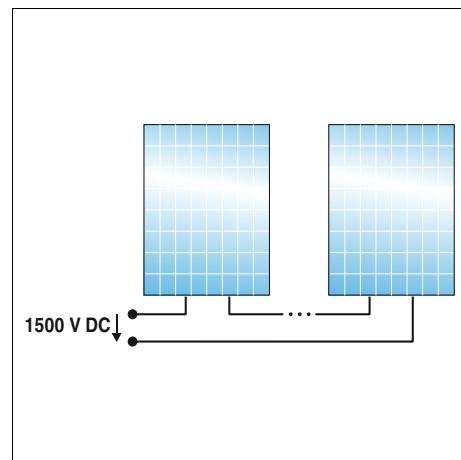

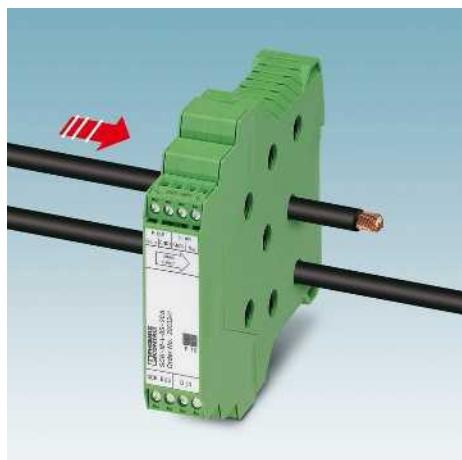

### Current topic: reliable monitoring

Whether a small roof-top system on a family home or a megawatt outdoor system: for reliable operation, the photovoltaic market requires monitoring systems where status information is continuously available and visualization is easy. Phoenix Contact offers a comprehensive portfolio of hardware and software products specifically designed for this purpose.

### Energy of the future

From installation to monitoring - in the "Components and systems for photovoltaics" brochure you will find further innovative solutions for your photovoltaic system, such as:

- Connection technology
- Surge protection
- Hardware and software solutions
- Generator connection boxes
- Tools and marking

### Contact-free current measurement

Contact-free measurement using Hall sensors offers many advantages:

- Safe isolation is already ensured by the cable insulation.
- No contact resistance due to additional contact points.
- The current is forwarded safely as the line circuit is not directly accessed.

### Space-saving installation without an additional power supply

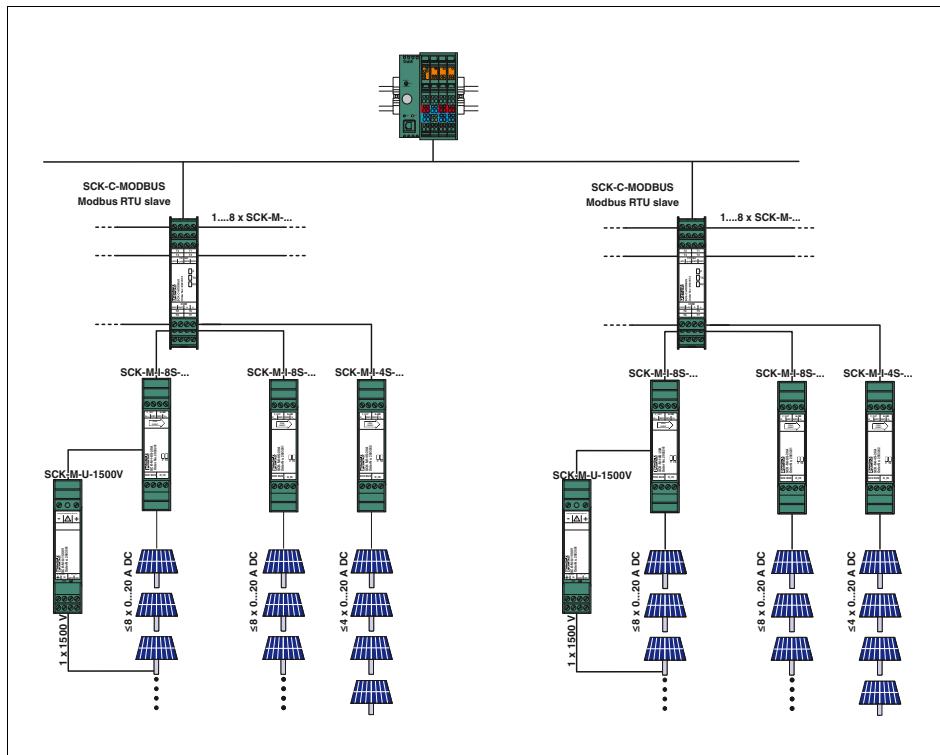

With a width of just 22.5 mm, the narrow measuring module bundles the cables in a confined space.

- The 2-wire communication cable is also used to supply the measuring modules.
- This means that one communication module supplies up to eight measuring modules – without an additional power supply.

### Flexible expansion

Optional extension of voltage measurement up to 1500 V DC.

- Also suitable for grounded systems.
- Suitable for PV systems with extra high system voltages
- Flexible use, even outside the SOLARCHECK system

### Easy integration in monitoring systems

The modular SOLARCHECK monitoring system consists of various measuring modules for current and voltage measurement and an associated communication module.

The communication module collects the measured values from the current measuring modules and forwards them to a higher-level controller. You can acquire up to eight or four string currents with one current measuring module each. A maximum of eight current measuring modules of any type can be connected to one communication module. The 2-wire communication cable is also used to supply the measuring modules with power. This means that no additional power supply is required in the field.

The voltage measuring module is usually connected to and also supplied via the analog input provided on the 8-channel current measuring modules.

# Monitoring

## Monitoring and diagnostics

### Solar system monitoring

#### PV string monitoring

##### SOLARCHECK

The modular SOLARCHECK monitoring system consists of various devices for current and voltage measurement and an associated communication module.

##### Communication module:

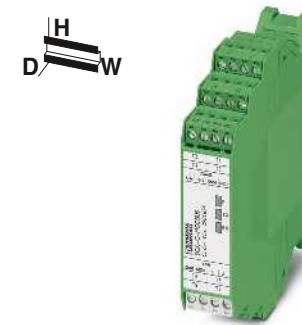

- For connecting and collecting measured values from up to eight measuring modules
- Provision of data for transfer to higher-level controllers

##### Current measuring modules:

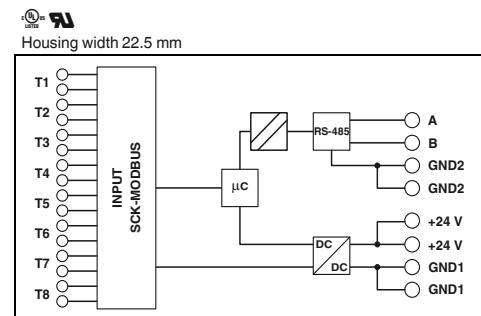

- 8-channel current measurement up to 20 A DC
- Detection of reverse currents up to -1 A
- 4-channel extension modules for 20 A DC
- Internal temperature monitoring
- Digital input for monitoring, e.g., the remote indication contacts of surge protection modules
- Supply via the communication module

##### Voltage measuring module

- Voltage measurement up to 1500 V DC in any grounded PV system
- Connection and supply is usually via the analog input provided (0 ... 10 V) on the 8-channel SOLARCHECK current measuring module
- Output of the voltage measured value as a 2 ... 10 V analog signal
- As an option, can also be removed from the SOLARCHECK group and used separately

Communication module

# Monitoring

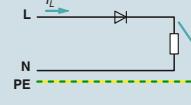

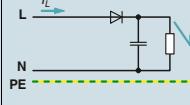

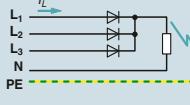

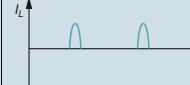

## Monitoring and diagnostics

**Detect errors before they actually occur**

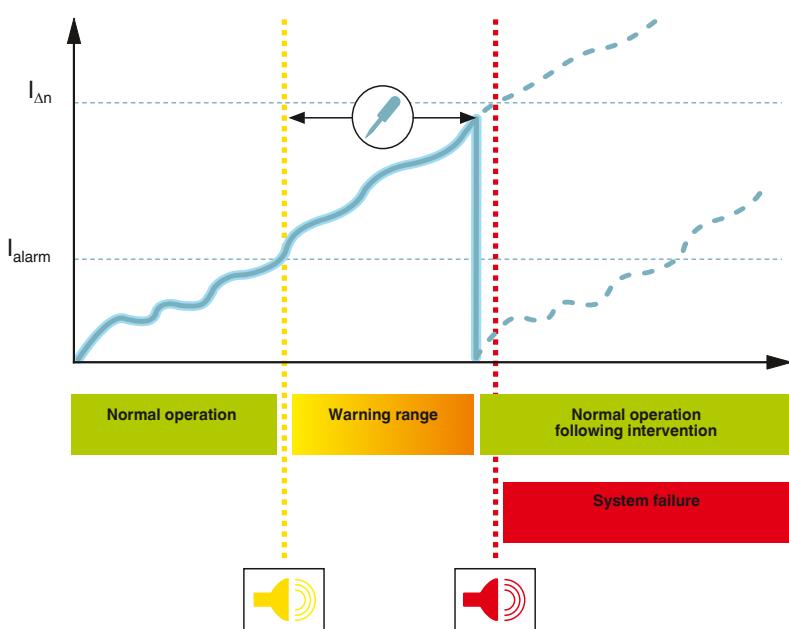

RCM devices provide residual current monitoring in grounded power supply systems. They detect residual currents at an early stage such as those that occur as a result of insulation errors. They can therefore be used to prevent forced system shutdown. Plans can be made to remove errors outside of operating hours. RCM devices also act as a form of fire prevention.

Increasing use is being made of equipment such as frequency inverters. In the event of an error, residual currents with a frequency of up to 50 kHz can be generated. Type B+ RCM devices from Phoenix Contact are already able to detect residual currents with frequencies up to 100 kHz. This far exceeds present-day requirements of 20 kHz for type B+ devices.

Circuit	Single-phase	Single-phase with smoothing	Three-phase star circuit
Correct load current			
Residual current to ground potential	 	 	 
Solution	Type A	-	-
	Type B	Type B	Type B

Residual currents can increase continually due to gradual processes. This can be attributed, for example, to humidity or conductive dirt on live parts. Residual current devices trip at different rated residual currents  $I_{\Delta n}$ , depending on their type. Additionally installed residual current monitoring devices prevent sudden system downtimes thanks to early warnings. The continuous supply of information about gradually increasing residual currents allows timely intervention. Unplanned system failures can be avoided.

### Control and monitor the charging process of electric vehicles

Sustainable E-Mobility requires safe and reliable charging infrastructure functions that can be intelligently integrated into energy systems if required. The controller and monitoring components from Phoenix Contact allow the setup of charging stations according to current standards and therefore ensure a high degree of safety and interoperability with electric vehicles.

#### Charging controllers for AC charging

Charge electric vehicles according to the IEC 61851-1 standard with the E-Mobility **EV-CC-...** and **EM-CP-PP-ETH** charging controllers. The portfolio addresses the entire spectrum of charging stations, from simple autonomous charging points up to networked stations. Comprehensive configuration options in the devices are provided for the specific requirements of our customers.

### From the charging point to the networked charging infrastructure

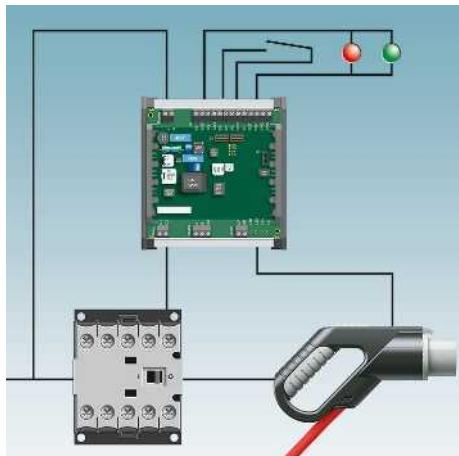

Phoenix Contact charging controllers can be operated both autonomously and in networks. Status data can be acquired via the integrated communication interfaces and controlled intervention into the charging process. Here we rely on standardized communication interfaces and protocols and therefore offer easy connection options to various automation systems.

#### Smart charging

Operating a charging infrastructure requires more than just the charging technology in the charging station. Intelligent charging infrastructures are integrated in management systems and communicate with billing and operator systems. Based on Phoenix Contact products, software function blocks for implementing charging and energy management, authorization routines, and interfaces to back-end systems are available, for example, via the Open Charge Point Protocol (OCPP).

### Residual current detection in the charging station

The E-Mobility residual current modules from the **EV-RCM** series detect AC and DC residual currents. In conjunction with existing residual current protection devices, the modules increase the voltage protection level during charging of electric vehicles according to DIN VDE 0100-722. Based on IEC 62752, residual current devices (e.g., RCD type A) are protected against DC components and can continue to be operated.

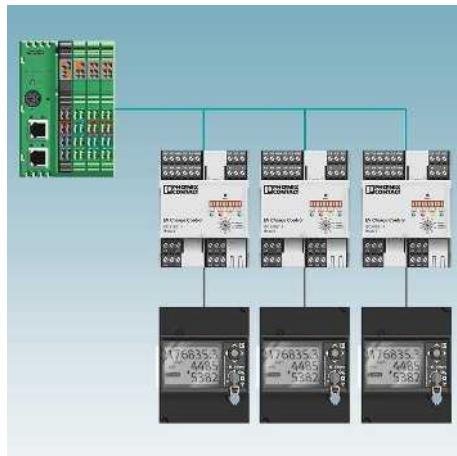

### All the necessary functions in one controller

The **EV-CC...** charging controllers are specially designed for simple charging points. All functions required for this application are integrated. From the interface to the vehicle, the control of the connector locking and its release in case of mains failure or control of the charging contactor, all in one device.

### The optimum marking solution for every version

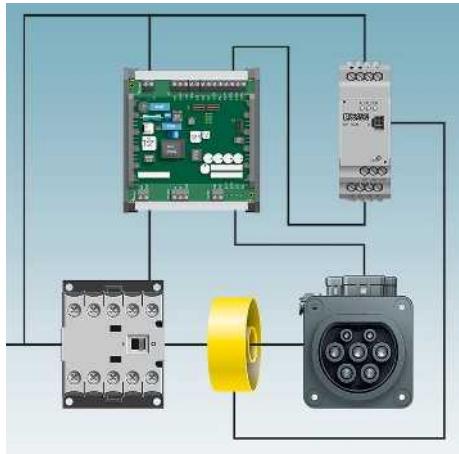

The versions of the **EV-CC...** are conceived respectively for the possible charging station types. Corresponding versions are available, whether for charging stations with permanently connected Vehicle Connector or with an Infrastructure Socket Outlet, classical design with DIN rail or PCB for integration into the housing.

### Interface to power meters

Detection of the actual charging current and the charging power for each individual vehicle is necessary for efficient charging and energy management.

The **EM-CP-PP-ETH** charging controller is equipped with a configurable RS-485/Modbus/RTU interface, to which various meters can be connected.

### Compatible with Phoenix Contact charging controllers

The universal **RCM modules** from Phoenix Contact detect DC and AC residual current and therefore offer additional protection during vehicle charging. Optional status monitoring and resetting of the RCM module is possible in conjunction with the charging controllers from Phoenix Contact.

### Vehicle Connectors and Infrastructure Socket Outlets

Phoenix Contact has a unique and wide range of Vehicle Connectors, charging cables, Infrastructure Socket Outlets, and vehicle inlets. Different standards for the European, American, and Chinese markets are covered. Solutions for both conventional AC and fast DC charging are available for all standards - in particular components of so-called "Combined Charging Systems" (CCS).

### Note:

Information on charging systems can be found in Catalog 4, Sensor/actuator cabling and industrial connectors.

## Components for E-Mobility

### EV CC Electrical Vehicle Charge Control

new

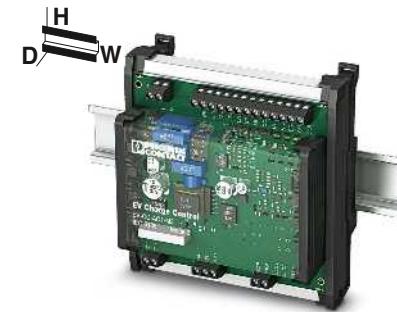

new

#### EV-CC-AC1-M3-CC-SER...

- AC charging according to IEC 61851-1, Mode 3
- Comprehensive configuration options
- Adjustable amperage
- Optimized for charging stations with vehicle connector (case C)
- RS-485 interface (Modbus/RTU slave)
- PCB version and DIN rail device

## Monitoring and diagnostics

### For high system availability

EMD monitoring relays can be used to detect deviations in important system parameters at an early stage. These can be indicated or system parts can be shut down selectively. EMD monitoring relays ensure error-free and cost-effective operation of your system. They are an inexpensive solution for numerous monitoring functions.

- Surge voltage and undervoltage
- Overcurrent and undercurrent
- Phase failure, phase sequence, and phase asymmetry
- Power factor and real power
- Motor winding temperature
- Levels

For system monitoring, choose from two product ranges: compact or multifunctional monitoring relays.

### Perfect timing

ETD timer relays ensure optimum time sequences.

The modules are the cost-effective alternative to a PLC: with easy configuration and fast wiring.

Choose from two product ranges for your ideal time control application:

- Ultra-narrow timer relays each with one time range and one function
- Multifunctional timer relays with selectable time ranges and functions

### Professionally packaged components

Function modules with professional housing and connection technology can be used to integrate electronic components in your system. They can be used to perform a variety of tasks:

- Diode modules provide protection against polarity reversal. In addition, they decouple messages in fault reporting systems.
- Lamp testing modules decouple signals in isolation in the field of fault reporting technology.
- Display modules simplify troubleshooting and provide help for monitoring processes.

### Compact monitoring relays

Ideal for simple monitoring tasks – from series production to building installation.

- Compact installation housing
- Quick and tool-free wiring with push-in technology
- Parameters can be adjusted easily using rotary switches
- Clear diagnostics, thanks to color status LEDs

### Multifunctional monitoring relays

- Parameters can be adjusted easily using rotary switches
- Fast error detection, thanks to fine tuning and short response times
- Worldwide use, thanks to wide range power supply unit or plug-in transformer
- Space saving – with two PDT outputs in 22.5 mm wide housing
- Electrically isolated measuring and supply circuits
- Clear diagnostics, thanks to color status LEDs

### Ultra-narrow timer relays

The space-saving and inexpensive solution for simple time control applications.

- Each with one time range and one function
- Overall width of just 6.2 mm – saves up to 70% space compared to conventional timer relays
- Precise time setting using the illuminated thumbwheel
- Fast wiring through the use of jumpers

### Multifunctional timer relays

For universal use thanks to wide range of functions.

- Just three versions for all conventional time control applications.
- Two floating PDT outputs on an overall width of just 22.5 mm
- Supply voltage via wide range power supply unit
- Optimum setting of times ranging from milliseconds to several days

### Function modules

Function modules transform components such as diodes into a shock-proof and dust-proof electronics module.

- Easy installation, thanks to electronics housing with IP20 protection that can be installed in a control cabinet
- Fast mounting on DIN rails, thanks to the foot catch
- User-friendly wiring, thanks to practical connection technology

# Monitoring

## Monitoring and diagnostics

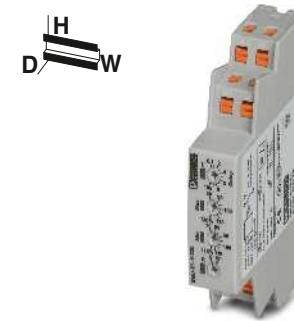

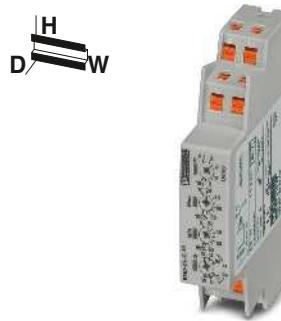

### Monitoring relays

#### Single-phase current monitoring

The **EMD-BL-C-10** monitors

AC currents from 0 ... 10 A.

- Adjustable response delay
- 0 ... 5 A or 0 ... 10 A measuring range
- Adjustable via rotary switch on the front

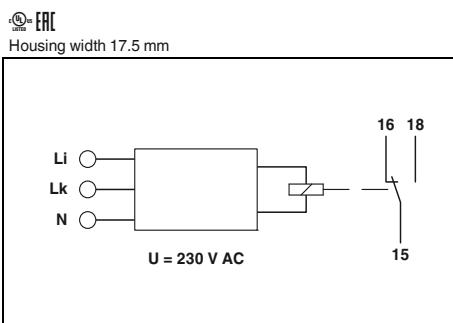

#### Single-phase voltage monitoring

The **EMD-BL-V-230** monitors DC and

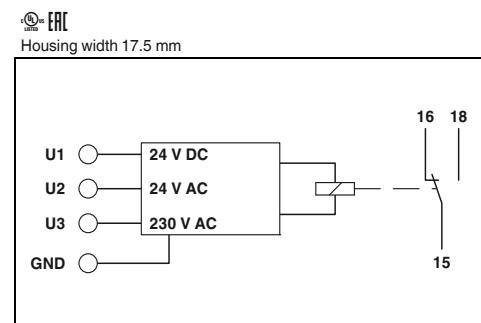

AC voltages.

- 24 V AC/DC or 230 V AC
- Separately adjustable response delay
- Adjustable monitoring range
- Adjustable via potentiometer on the front

**Current monitoring, 1-phase

## Monitoring relays

### Three-phase voltage monitoring

The **EMD-BL-3V-400** monitors three-phase AC voltages.

- 3~ 400 V AC/230 V AC ±30%
- Separately adjustable response delay
- Adjustable monitoring range
- Adjustable via potentiometer on the front
- Supply from the measuring circuit

**Voltage monitoring, 3-phase Window, phase sequence**

### Phase monitoring

**Phase sequence, phase failure, asymmetry**

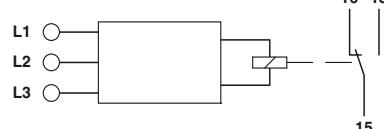

### Phase monitoring

The **EMD-BL-PH-400** monitors three-phase AC voltages.

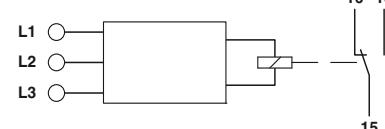

- 3~ 208 ... 480 V AC/120 ... 277 V AC
- Adjustable response delay
- Adjustable asymmetry: 5 ... 25%/OFF
- Adjustable via potentiometer on the front
- Supply from the measuring circuit

# Monitoring

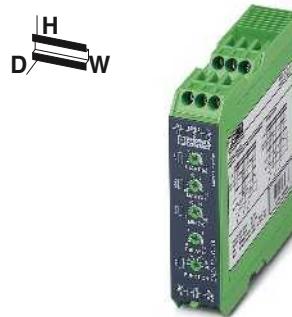

## Monitoring and diagnostics

### Monitoring relays

#### Three-phase voltage monitoring

**EMD-...-3V...** monitoring relays monitor three-phase AC voltages of 160 ... 897 V AC (depending on the device concerned).

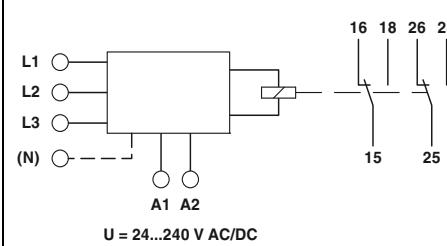

- Adjustable response delay
- Variable supply voltage range
- Adjustable via potentiometer on front
- Adjustable asymmetry

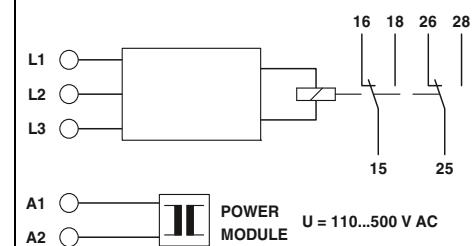

**Undervoltage and phase monitoring,  
400 V or 230 V**

**Undervoltage and phase monitoring,  
500 V or 690 V**

IEC  
Housing width 22.5 mm

IEC  
Housing width 45 mm

# Monitoring

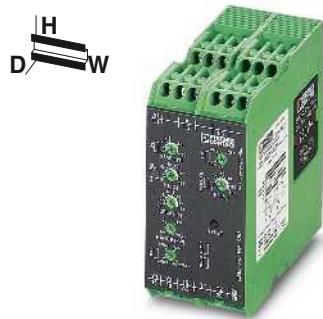

## Monitoring and diagnostics

### Monitoring relays

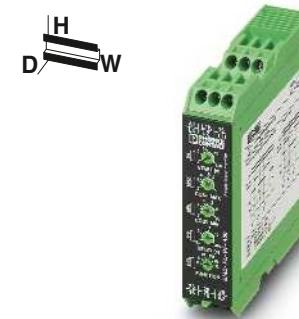

#### Real power monitoring

The real power in single and 3-phase networks can be monitored with the **EMD-FL-RP-480** real power monitoring relay.

- Monitoring range up to 7.2 kW
- Separately adjustable startup and release delays
- Temperature monitoring of the motor winding
- Variable supply voltage range
- Detection of switched off loads

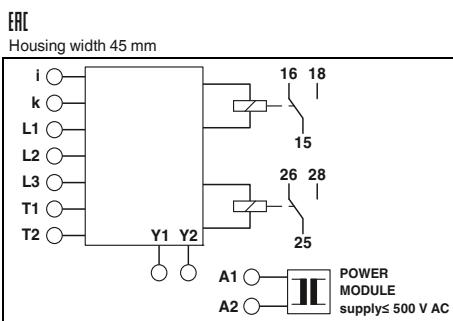

Real power monitoring

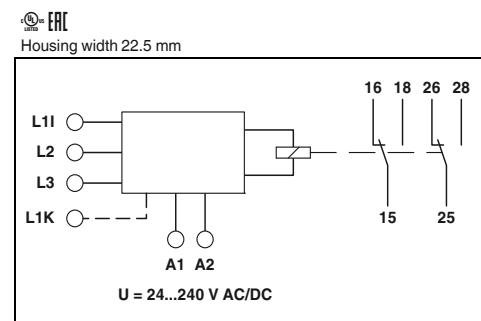

Load monitoring ( $\cos \phi$ )

#### Load monitoring ( $\cos \phi$ )

The **EMD-FL-PF-400** monitoring relay is a  $\cos \phi$  monitor for load monitoring in single or three-phase networks.

### Compact time relay

new

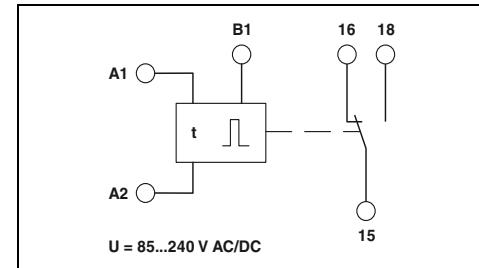

The multifunctional time relay offers universal use thanks to a variety of functions and various time settings. The rotary switches on the front of the housing allow easy parameterization. The compact design also allows flexible use.

#### Main features:

- Adjustable time
- Time range: 50 ms to 1 h
- Non-floating control input
- Delay functions
- Wiper functions
- Output: one floating PDT
- Clear diagnostics via status LED

EN 61000-6-2

## Timer relay

### Plug-in timer module for RIF-1, RIF-2, RIF-3, and RIF-4

The multifunctional plug-in timer module transforms the relay module into a timer relay. The RIF-1 to RIF-4 bases can be fitted with this module. Using DIP switches, you can choose from three time ranges and select four time functions. Fine adjustments to the time are made using a potentiometer. Relays can be operated with an input voltage of 24 V AC/DC.

#### Functions:

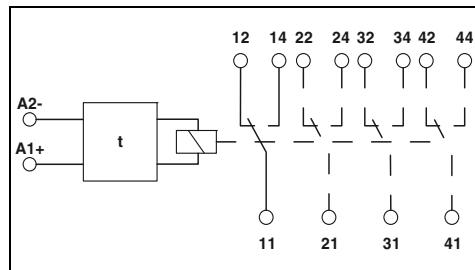

- With switch-on delay
- With passing make contact
- Flasher/pulse generator

#### Time ranges:

- 0.5 s - 10 s
- 5 s - 100 s
- 0.5 min - 10 min
- 5 min - 100 min

## Monitoring and diagnostics

### Ultra-narrow timer relays

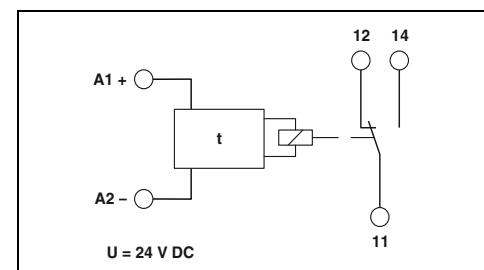

The **ETD-BL-1T...** ultra-narrow timer relays show their strengths in applications that involve set parameters for functionality and time range.

- Purposeful device selection: one function, one time range
- High level of setting accuracy thanks to labeled and illuminated thumbwheel
- Narrow overall width of just 6.2 mm

Timer relay with switch-on delay,  
voltage controlled

## Monitoring and diagnostics

### Multifunctional timer relays

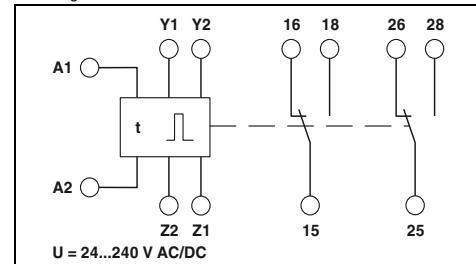

The full range of conventional applications can be accommodated by the three versions of the **ETD** multifunctional timer relay.

- Suitable for universal use thanks to varied functions and selectable time ranges
- Time ranges from a few milliseconds to several days
- Variable supply voltage range
- 2 floating PDT outputs

Multifunctional timer relay,  
two adjustable times

Housing width 22.5 mm

### Technical data

#### Functions

## Monitoring and diagnostics

### Diode modules

Diode circuits perform various tasks in electrical control systems, particularly in electronic ones:

- Electrical decoupling of messages in fault signaling systems
- Spark-suppression diodes for limiting surge voltages of inductive loads, (solenoid valves, DC relays or similar)
- Can be supplied as “diode gates” combined with anode or cathode or as freely assignable diodes

# Relay modules

The importance of the reliability of industrial automation equipment is growing with the increase in use of electronic modules.

Modern relay or solid-state relay interfaces perform a wide range of tasks. Whether in production engineering, for the electrical equipment of machines or in control engineering for energy distribution, building automation and materials processing – the main aim is to guarantee the exchange of signals between the process peripherals and the superior, central control systems. This exchange must provide reliable operation, be floating and electrically unambiguous. Safe electrical interface modules that meet the requirements of modern system concepts must include the following features:

- Coupling of different signal levels
- Safe electrical isolation between input and output
- High degree of resistance to interference

In practice, a relay interface comes into use when dealing with a flexible interface configuration with a large switching capacity range and the possibility of combining different types of contact. Further important features of relay interfaces are:

- Electrical isolation between open contacts
- Switching of independent switching current types
- High short-term overload resistance in the event of a short circuit or voltage peaks
- Practically impervious to electromagnetic fields
- Easy handling

Solid-state relay modules are used when an interface between the process peripherals and electronics is subject to the following requirements:

- Low control power
- High switching frequencies
- Wear-free switching with no contact bounce
- Resistance to vibration and impacts
- Long service life

# Relay modules

## Basics of relay technology

### General

Electromechanical relays are used as interface modules between the process I/O devices, on the one hand, and the open-loop/closed-loop control and signaling equipment, on the other, for level and power adjustment purposes.

Essentially, electromechanical relays can be divided into two main groups: monostable and bistable relays.

With monostable DC or AC relays, the contacts automatically return to the release state as soon as they are de-energized.

In the case of bistable relays, the contacts remain in their present switch position when the excitation current is switched off.

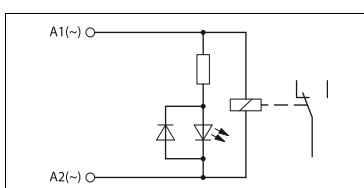

### Coil side

#### Input circuits and voltage types

There are various kinds of input circuit depending on the type of relay used and the nature of the control voltage.

If pure AC relays are used (AC input), the input circuit is generally nothing more than a visual switching status indicator.

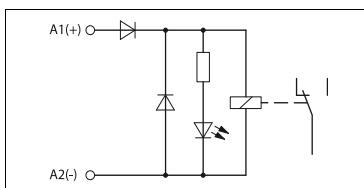

Unless otherwise specified, the frequency of the control voltage is 50/60 Hz.

Basic construction of a relay with AC input

In the case of a pure DC input, the most important addition to the circuit is a freewheeling diode. This limits the voltages induced on the coil on circuit interruption to a value of approximately 0.7 V, which does not pose a danger to any connected control electronics.

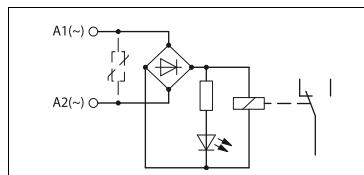

As the freewheeling diode can only perform its required function if the polarity of the voltage connection is correct, a reverse polarity protection diode is also integrated into the input circuit.

Basic construction of a relay with DC input

To allow DC or AC voltage operation, a bridge rectifier is connected in the input circuit. The diodes are simultaneously responsible for performing rectification, freewheeling, and polarity reversal protection functions. The interrupting voltage of the coil is limited to approximately 1.4 V.

To protect the input circuit against surge voltages, a varistor is also connected (depending on the type) upstream of the bridge rectifier.

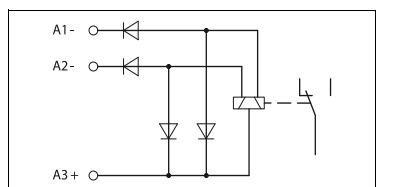

Basic construction of a relay with AC/DC input

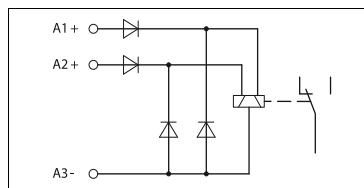

Bistable latching relays with duplex winding are operated solely with DC voltage.

With these types of relay, there are three coil connections on the coil side. In addition to the common connection, there are separate connections for "setting" and "resetting"; these are controlled by short pulses only. As a result, the relays hardly heat up at all. Simultaneous control of both control inputs is not permitted.

A distinction is made between negative switching (M) and positive switching (P) types, depending on the polarity of the freewheeling and polarity protection diodes.

Block diagram of a bistable relay, negative switching type

Block diagram of a bistable relay, positive switching type

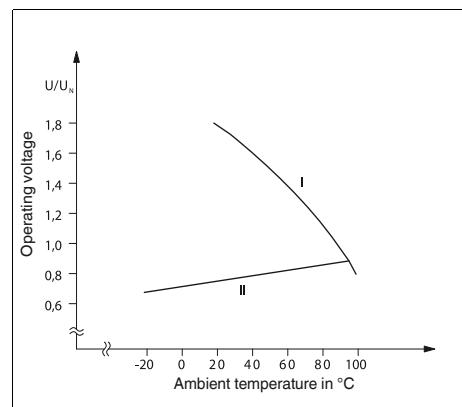

### Operating voltage range

The ambient temperature prevailing at the location of use has a major impact on certain relay operating parameters.

As the ambient temperature increases, the coil winding heats up, causing the response and release voltages to rise. At the same time, the maximum permitted coil voltage decreases, which means that the

usable working range becomes restricted as a result.

The diagram below illustrates how the operating voltage behaves as a function of the ambient temperature.

Basic curve of a relay operating voltage

I: Maximum permitted voltage with 100% operating time (OT) and assuming compliance with the coil temperature limit

II: Minimum response voltage

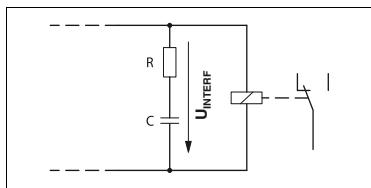

### Interference voltages and interference currents on the coil side

When inductive or capacitive interference voltages are coupled into the long supply lines of a relay, this can prevent the relay from operating safely.

If the coupled-in voltage exceeds the release voltage required by the IEC 61810-1 "relay standard", in extreme cases the relay may fail to release. In the case of DC relays, this release voltage is  $\geq 0.05 \times U_N$  and for purely AC relays, it is  $\geq 0.15 \times U_N$ .

The same disturbances can occur when a relay with a low input power is controlled by an electronics module with an AC voltage output featuring an RC circuit. The typical leakage current from RC elements of this kind (generally in the region of several mA) provides sufficient control power to prevent the downstream relay from releasing or even enough power to excite it.

The disturbance level of any interference voltages that are present can be reduced by connecting an RC element parallel to the relay coil. This measure also subjects the interference voltage to a capacitive load, causing it to collapse.

External RC interference suppressor to prevent interference voltage coupling

The following values are recommended for the purpose of dimensioning the RC element:

- $R = 100 \dots 220 \Omega$
- $C = 220 \dots 470 \text{ nF}$

The SO46 series have been developed to provide even higher levels of immunity to interference. These products already contain an integrated RCZ filter. See, for example, PLC...SO46.

### Contact side, contact materials

Given the wide variety of potential applications in the different industrial sectors, the relays used must be matched to the various tasks that need to be performed by selecting the right kind of contact material.

The voltage, current, and power values play an important role when determining the suitability of contact materials. Other criteria include:

- Contact resistance
- Erosion resistance
- Material migration
- Welding tendency
- Chemical influences

In this way, the various contact materials (generally noble metal alloys) can be matched to the relevant usage ranges.

The adjacent table provides details of some of the key materials.

### Contact protection circuit

Every electrical load constitutes a mixed load with ohmic, capacitive, and inductive components.

When these loads are switched, the switching contact is in turn subjected to a load, to either a lesser or greater extent. This load can be reduced by including a suitable contact protection circuit.

In view of the fact that loads with a large inductive component are predominantly used in practice (e.g., contactors, solenoid valves, motors, etc.), these application scenarios are worth considering in more detail.

On interruption, voltage peaks with values of up to several thousand volts occur due to the energy stored in the coil.

These high voltages cause an electric arc on the switching contact which can destroy the contact due to material vaporization and material migration. The electrical service life is reduced considerably as a result. In extreme cases, the relay may fail in

Contact material	Typ. properties	Typ. applications	Guide values for the usage range*
Gold Au	Largely insensitive to industrial atmospheres; low and constant contact resistances in the range of small switching capacities with nickel (AuNi) or silver (AuAg) alloys.	Dry measuring and switching circuits, control inputs	$\mu\text{A} \dots 0.2 \text{ A}$ $\mu\text{V} \dots 30 \text{ V}$
Silver Ag	High electrical conductivity; sensitive to sulfur, therefore often gold-flashed (approximately 0.2 $\mu\text{m}$ ) as protection; nickel (AgNi) or copper (AgCu) alloys increase the mechanical resistance and erosion resistance and reduce the welding tendency.	Universal; suitable for medium loads; nickel alloys (AgNi 0.15) for DC circuits with medium to large loads.	$\geq 12 \text{ V}$ $\geq 10 \text{ mA}$
Silver, hard gold-plated Ag+Au	Properties similar to gold Au, when switching loads > 30 V/0.2 A, the hard gold plating (5 - 10 $\mu\text{m}$ ) is destroyed and the values and properties of the Ag contact are applicable. However, a reduction in the service life is then to be expected.	Suitable for control inputs and other small loads.	$\geq 100 \text{ mV}$ $\geq 1 \text{ mA}$
Tungsten W	Highest melting point; very high erosion resistance; greater contact resistances; very low welding tendency; susceptible to corrosion; often used as lead contact.	Loads with very high switch-on currents, e.g., glow lamps, fluorescent lamps.	$\geq 60 \text{ V}$ $\geq 1 \text{ A}$
Silver nickel AgNi	High erosion resistance; low welding tendency; higher contact resistances than with pure silver.	Universal; suitable for medium to high loads; DC circuits, and inductive loads.	$\geq 12 \text{ V}$ $\geq 10 \text{ mA}$
Silver nickel AgNi+Au	Properties similar to gold Au, when switching loads > 30 V/0.2 A, the hard gold plating (5 - 10 $\mu\text{m}$ ) is destroyed and the values and properties of the AgNi contact are applicable. However, a reduction in the service life is then to be expected.	Suitable for control inputs and other small loads.	$\geq 100 \text{ mV}$ $\geq 1 \text{ mA}$
Silver tin oxide AgSnO	Low welding tendency; very high erosion resistance for high switching capacities; low material migration	Application depends heavily on the relay type; switching circuits with high make and break loads, e.g. glow lamps and fluorescent lamps, AC and DC circuits. Due to different alloys and production procedures, partly also suitable for smaller loads.	$\geq 12 \text{ V}$ $\geq 100 \text{ mA}$ ( $\geq 10 \text{ mA}$ )
Silver tin oxide, hard gold-plated AgSnO+Au	Properties similar to gold Au, when switching loads > 30 V/0.2 A the hard gold plating (5 - 10 $\mu\text{m}$ ) is destroyed and the values and properties of the AgSnO contact are applicable. However, a reduction in the service life is then to be expected.	Suitable for control inputs and other small loads.	$\geq 100 \text{ mV}$ $\geq 1 \text{ mA}$

\* Values depend on the relay used and on further operating conditions.

the very first switching cycle with DC voltage and an electric arc.

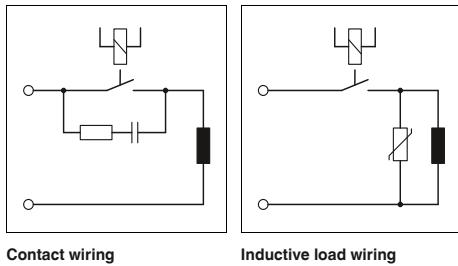

A protective circuit must be used to suppress the formation of an electric arc. With optimum dimensioning, almost the same number of cycles can be achieved as with an ohmic load.

# Relay modules

## Basics of relay technology

In principle, there are a number of possible ways of achieving an effective circuit:

1. Contact wiring
2. Load wiring
3. Combination of both wiring methods

In principle, protective measures should intervene directly at the source of the interference.

Wiring a load should therefore be given priority over wiring the contact.

The following points are advantageous for the load circuit (image on right):

1. The circuit is only loaded with the induction voltage during interruption. By contrast, the sum of the operating voltage and the induction voltage is applied to the contact circuit.
2. When the contact is open, the load is electrically isolated from the operating voltage.
3. It is not possible for the load to be activated or to "stick" due to undesired operating currents, e.g., from RC elements.
4. Cut-off peaks of the load cannot be coupled into parallel control lines.

Nowadays, solenoid valves are usually connected using valve connectors that are also supplied with LEDs and components that limit the induction voltage. Valve connectors with an RC element, varistor or Zener diode often do not quench the arc and only serve to comply with legislation governing EMC. Only valve connectors with an integrated 1N4007 freewheeling diode quench the arc quickly and safely, thereby increasing the service life of the relay by a factor of 5 to 10. Valve connectors with LED, integrated 1N4007, and free cable end can be supplied on request as part of the SAC range.

## Switching small loads

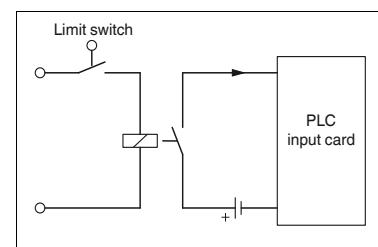

Small loads must be processed mainly in applications where signals must be forwarded to control inputs (e.g., of a PLC).

With these loads, no switching sparks (electric arcs) occur on the contacts in the small load range.

In addition to the constant cleaning effect due to contact friction, this switching spark assumes the function of penetrating non-conductive contamination layers that are formed on the contact surfaces of power contacts.

Application example: measurement point changeover

Application example: PLC input signal

These contamination layers are usually oxidation or sulfidation products of the contact materials silver (Ag) or silver alloys such as silver nickel (AgNi) or silver tin oxide (AgSnO). As a result, the contact resistance may rise so considerably within a short time that reliable switching is no longer possible in the case of small loads.

Due to these properties, the high-performance contact materials mentioned are not suitable for small load applications.

Gold (Au) has become accepted as the contact material of choice for these usage ranges mainly on account of its low and constant contact resistances even with small loads and its insensitivity to sulfurous atmospheres.

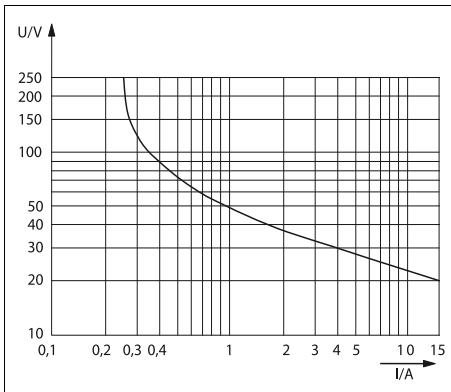

For the smallest of loads and even greater contact reliability, double contact relays with gold contacts are used.

The slotted contact spring in this design provides two parallel contact points with even lower contact resistances and considerably higher contact reliability.

### Switching large DC loads

Conventional switching relays can only switch off relatively small direct currents (which contrasts with their ability to switch off the maximum permitted AC current), since there is no zero crossing to extinguish the arc automatically. This maximum DC value is also dependent to a large extent on the switching voltage and is determined, among other things, by constructional features such as contact spacing and contact opening speed.

The corresponding current and voltage values are documented by relay manufacturers in electric arc or load limit curves.

Example of a load limit curve (dependent on the type)

A non-attenuated inductive DC load further reduces the values given for switchable currents. The energy stored in the inductance can cause an electric arc to occur, which forwards the current through the open contacts.

With an effective contact protection circuit, preferably freewheeling diodes of the type 1N4007, the service life can be increased by a factor of 5 to 10 in relation to unprotected or unfavorably protected inductive loads (see also "Contact protection circuit" section).

If higher DC loads than those documented are to be switched or if the electrical service life is to be increased, several contacts of a relay can be connected in series. See, for example, REL-IR... industrial relays.

Alternatively, solid-state relays with DC voltage output can also be used.

### Switching lamps and capacitive loads

Regardless of the type of voltage, all kinds of lamps and loads with a capacitive component impose extreme requirements on the switching contacts. The moment it is switched on, in other words precisely in the dynamic chattering phase of the relay, extremely powerful current peaks occur. These are often in the region of several tens of amps, and not infrequently are known to exceed 100 A, which results in welding of the contact. This can be remedied by using specially optimized "lamp load relays" that can cope with these inrush peaks. See, for example, PLC...IC type.

### Switching capacity according to utilization categories AC15 and DC13 (IEC 60947)

In practice, both the maximum interrupting rating for AC loads and the DC cut-off values taken from the load limit curves provide only a rough guide for selecting a relay. In reality, this is insufficient, since real loads in the vast majority of industrial applications have inductive or capacitive components and the wiring of the loads can be totally different. As already described, this sometimes leads to considerable variations in terms of service life.

The IEC 60947 contactor standard seeks to avoid these disadvantages by dividing the loads into various utilization categories (DC13, AC15, etc.). This standard is also partly applied to relays. However, users must be aware of the fact that these values are only applicable in practice to a limited extent as well, since all DC13 and AC15 test loads are highly inductive and are also operated without any protective circuits at all (see "Contact protection circuit" section). Moreover, the switching capacity test according to IEC 60947 only requires 6060 cycles to be performed by way of a minimum requirement.

A much more reliable way to determine the switching capacity and the anticipated service life is to refer to the specific application data. Using a comprehensive data bank, the service life can be accurately estimated for most applications and, if necessary, suggestions for improvement can be made. In the case of critical applications, the user is advised to gather service life information based on empirical data.

# Relay modules

## Basics of solid-state relay technology

### Control side

Solid-state relays for various voltage and power levels are available from Phoenix Contact for use as interface modules designed to match process I/O devices to control, signaling, and regulating devices. The solid-state relay element which is actually located in the module is limited to one defined voltage range by virtue of its design. The current consumption on the input side fluctuates depending on the circuit architecture and voltage level.

To accommodate all industrial voltages between 5 V and 230 V, an input circuit is provided. The inputs for DC voltage and AC voltage must always be differentiated.

### DC input

Adjustments are made in accordance with the various voltage levels by adding electronics which have been specially adapted to the desired voltage range. In the case of most modules, a polarity protection diode provides reliable protection against destruction in the event of a control voltage being connected incorrectly. Specially coordinated filters reliably suppress possible high-frequency noise emissions.

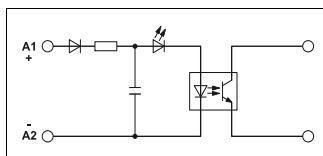

Figure 1: block diagram for DC input

### AC input

The solid-state relay element requires a stable control voltage to ensure reliable operation. In the case of the AC input, this is achieved by connecting a rectifier and filter capacitor upstream. Rectifying is followed, in principle, by the same circuit architecture as the DC input.

The switching frequency always lies below half the mains frequency. Due to the filter capacitor, a higher switching frequency cannot be achieved. This would result in

continuous through-switching.

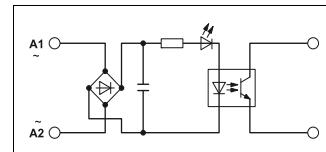

Figure 2: block diagram for AC input

### Load side

Depending on the application and the type of load, the solid-state relay output must meet various requirements. The following are crucial:

- Power amplification
- Matching the switching voltage and the switching current (AC/DC)
- Short-circuit protection

For these different applications, the solid-state relay element must also be processed using additional electronics on the output side.

### DC output

In order to achieve the necessary output power, the solid-state relay element is supplemented by one or more semiconductor components.

The on-site user should nevertheless simply regard the connection terminal blocks of the output as conventional switch connections. Observing the specified polarity is the only essential requirement.

For practical reasons, the following criteria should be taken into account when selecting a suitable solid-state relay:

1. Operating voltage range (e.g., 12 ... 60 V DC)  
This determines the minimum or maximum voltage to be switched. The lower value must be observed in order to ensure reliable operation. In order to protect the output transistor, the upper value must not be exceeded.
2. Maximum continuous current (e.g., 1 A)  
This value indicates the maximum continuous current. If this value is exceeded continuously, the output semiconductor will be destroyed. The dependence of the output current on the ambient temperature of the solid-state relay should also be taken into consideration. A derating curve is therefore generally specified for solid-

state power relays. This shows the maximum load current as a function of the ambient temperature.

### 3. Output circuit

The 2-wire output is similar to a mechanical contact. Only the polarity of the connections is specified and must be observed.

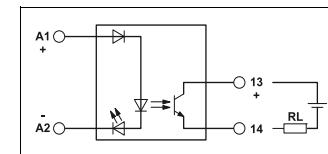

Figure 3: 2-wire output

The 3-wire output is non-isolated and requires both potentials from the voltage source on the output side to be connected if it is to operate reliably.

When switched off, a permanent reference to ground (negative potential) is established. In addition, this output circuit offers the advantage of an almost constant internal resistance.

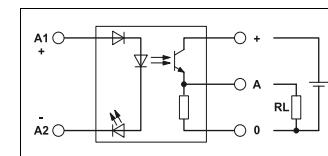

Figure 4: 3-wire output

### AC output

In order to control the switching and control devices for AC voltage, a semiconductor for AC voltage (TRIAC or thyristor) is connected downstream of the solid-state relay element.

As with the DC output, it is particularly important to consider the maximum operating voltage range and the maximum continuous load current as a function of the ambient temperature.

## Basics of solid-state relay technology

In addition, the maximum peak reverse voltage of the TRIAC (e.g., 600 V) is crucial with AC outputs. This must not be exceeded even in the case of voltage fluctuations or interference voltage peaks in order to prevent destruction. That is why the AC outputs of all solid-state relays from Phoenix Contact have an internal RC protective circuit to protect against interference voltage peaks.

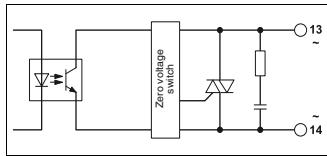

Figure 5: basic circuit diagram of AC output

## Protective circuits

The moment inductive loads (contactors, solenoid valves, motors) are switched off, surge voltages occur and these can reach very high amplitudes. Electronic components and switching elements are particularly susceptible to these. A protective circuit should therefore always be provided to prevent destruction.

A parallel connection to the load effectively reduces the switching surge voltage to a harmless level. Depending on the solid-state relay output and type of load:

- A freewheeling diode/suppressor diode (DC only)
- A varistor (AC and DC)
- Or an RC element (AC only)

can provide the necessary protection.

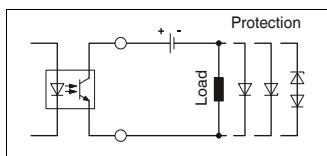

Figure 6: protective circuit with DC voltage output

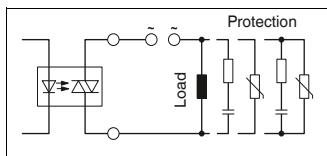

Figure 7: protective circuit with AC voltage output

## Application notes

Input solid-state relays acting in the direction from the I/O devices to the controller (signaling, controlling, monitoring)

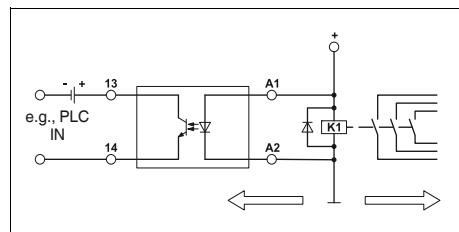

Plug-in version:

- PLC-O...

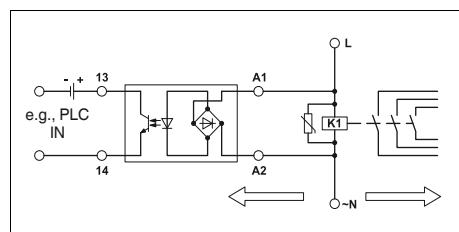

Modular version:

- DEK-OE...
- EMG 10-OE...
- SIM-EI...
- OPT...

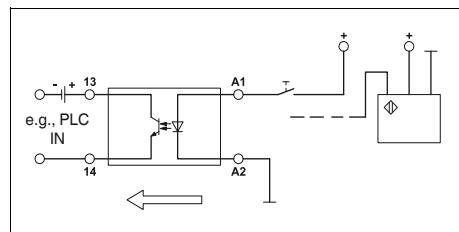

Example: load contactor monitoring (DC contactor)

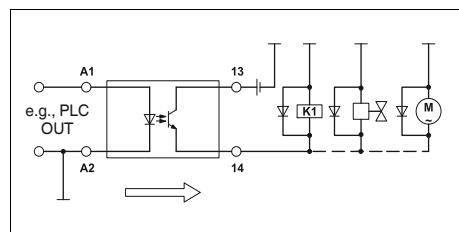

Example: load contactor monitoring (AC contactor)

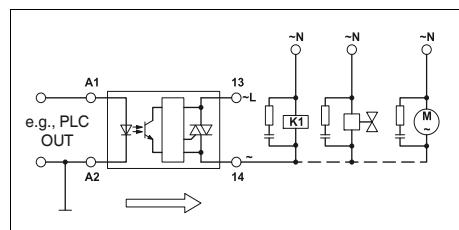

Example: position indication with limit stop contact or initiator

Example: switching the contactor, solenoid valve or motor (DC load)

Example: switching the contactor, solenoid valve or motor (AC load)

## Remarks:

1) Ground (negative) potential from the input and output of the solid-state relay must not be connected.

2) DC loads must be provided with an effective protective circuit (e.g., diode).

3) AC loads must be protected with a varistor or an RC element.

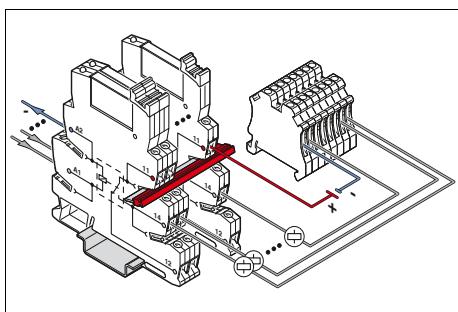

# Relay modules

## Sensor/actuator configuration aids and handling of interference signals

### Configuration aid for connecting sensors and actuators

Electromechanical relays or solid-state relays are used as a coupling element between the controller and the sensors or actuators in the field. This interface ensures appropriate signal conditioning with respect to current and voltage between the controller and field level.

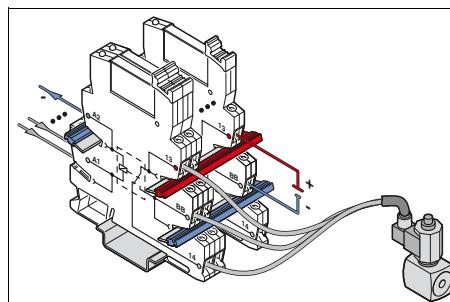

### Conventional connection of actuators

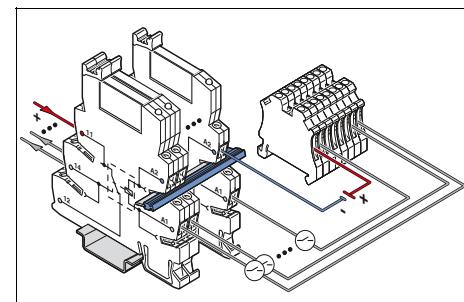

If actuators such as solenoid valves are connected to the controller via a universal relay with PDT contact, an additional terminal block strip must be used for the common load return line. The positive potential of the loads is applied to connection terminal block 11 (PDT contact) at the relay modules. This can be distributed over all relay modules using jumpers. This means only the direct connection of the potential to a relay is necessary. The loads are connected to connection terminal blocks 14 (N/O contact). The negative potential required is supplied at a terminal block. This is then distributed to further terminal blocks by means of jumpers. However, load return lines for the individual actuators are applied to every terminal block. This results in a common load return line potential for all actuators via the additional terminal block.

Due to increased space requirements and additional wiring to the terminal block, the use of additional terminal blocks for distributing potential is extremely time-consuming.

### Easy wiring of actuators

### Conventional connection of sensors

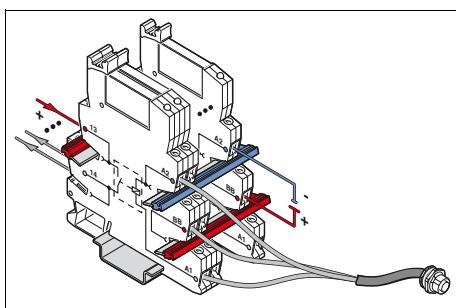

The PLC...ACT relay modules enable fast and easy connection of actuators. The positive potential of the loads is applied to connection terminal block 13. This can be distributed over all relay modules using jumpers. This only makes direct connection to a module necessary. The actuators are connected to contact 14 (N/O contact). In the case of PLC...ACT relay modules, an N/C contact is not required. Instead, the BB connection serves as an option for connecting the load return line. Here the common negative potential is supplied and distributed by means of jumpers. Conventional wiring of the terminal block is not necessary due to direct connection of the load return line potential to the relay module. This means that no additional space is required in the control cabinet and simpler wiring minimizes the risk of error.

If sensors such as proximity switches are connected via a universal relay to a controller with a PDT contact, an additional terminal block strip must be used for the common sensor supply voltage. It must also be observed that either the wiring in the control cabinet must be the other way round since control of the relay is now from the field level and not via the controller. Or the relay module is installed in the control cabinet rotated at 180°. The negative potential of the sensors is applied at connection terminal block A2 on the relay module. This can be distributed over all relay modules using jumpers. This means only the direct connection to a relay is necessary. The sensors are connected to connection terminal block A1. The necessary positive potential is supplied to a terminal block and distributed to further terminal blocks by means of jumpers. However, the supply for the individual sensors is applied to every terminal block. This results in a common supply signal for all sensors via the additional terminal blocks.

Due to increased space requirements and additional wiring to the terminal block, the use of additional terminal blocks for distributing potential is extremely time-consuming.

### Configuration aid for handling interference signals

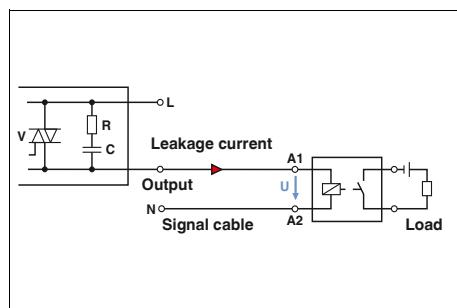

#### Easy wiring of sensors

Sensors can be efficiently coupled with the controller with the PLC...SEN relay modules. The input and output side at the module are already interchanged so that the signal direction from the field to the controller can be ideally represented. Therefore, three connection terminal blocks A1, A2, and BB are located on the control side of the relay. The common negative potential of the sensors is then connected to A2 and distributed to further relay modules by means of jumpers. The sensors are connected directly to the A1 connections. Connection BB is used for the common supply potential of the sensors. The potential is distributed to all connected sensors by means of the jumpers. However, only connections 13 and 14 for the N/O contact are located on the contact side. Signal feedback to the controller takes place via these connections. The terminal block for conventional wiring can be saved by connecting the sensor supply voltage directly to the relay module. This means that no additional space is required in the control cabinet and simpler wiring minimizes the risk of error.

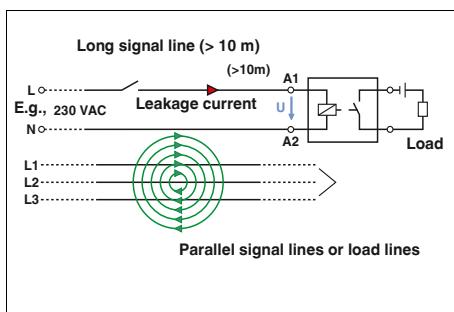

According to IEC 61810-1, the standard release voltage of a relay is 5% of the nominal voltage for DC coils and 15% for AC coils. That means that a relay with a nominal voltage of 230 V AC is switched off only when the control voltage is  $\leq 0.15 \times 230 \text{ V AC} = 34.5 \text{ V AC}$ . If interference signals occur on the control side of a relay that are greater than the release voltage, defined switch-off is no longer possible. In the worst case, the interference is large enough to energize the relay. The application is still in a switched-on state although no signal is applied by the controller. There can be various reasons for this.

### Leakage current with AC voltage output card

Leakage current on the signal line occurs if control of a relay takes place via an output card with AC voltage. This is caused by the RC wiring of the AC voltage output. Typically, the leakage current has a control power that is large enough not to switch off the relay reliably.

### Coupling of interference signals from parallel lines

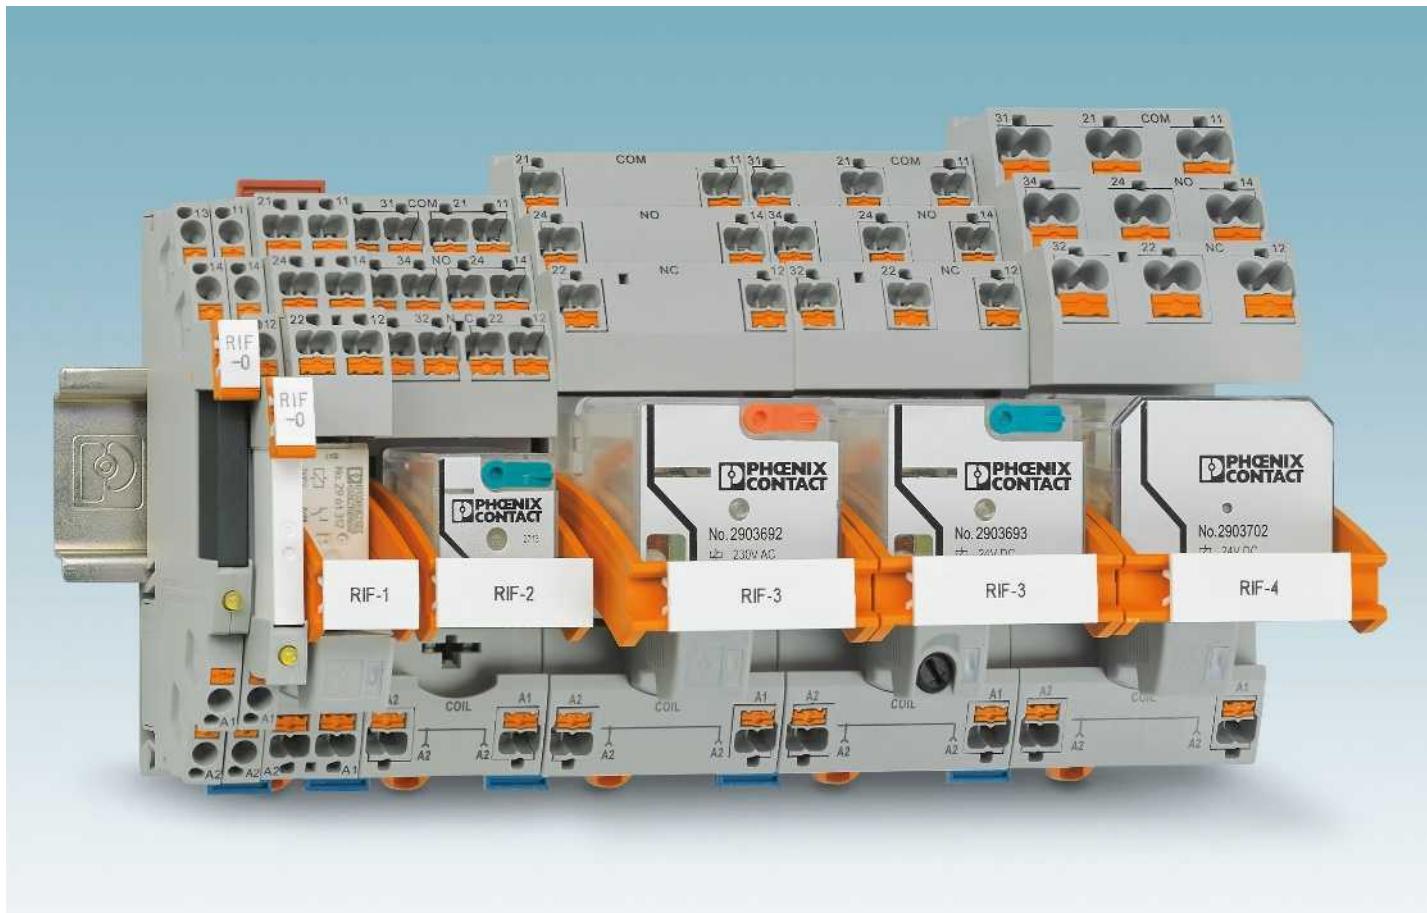

If the control lines to the relay are very long, interference can occur from parallel-running cables. These influence the actual control line and couple the signals to them. This interference voltage can be measured on the control side, even if no signal is applied by the controller.

### Safe shutdown even with interference signals

The PLC...SO46 series is equipped with RCZ wiring in the base. The release voltage of the relay is increased by this circuit of resistor, capacitor, and Zener diode so that the relay is resistant to interference voltage. In the case of a 230 V AC relay, the standard release voltage is 34.5 V AC. The PLC...230UC...SO46 modules have a release voltage of 80 V AC. This enables the relay to switch off reliably at interference voltages of  $\leq 80 \text{ V AC}$ . The PLC...SO46 bases are also available with further voltages. Fitting is possible with both electromechanical relays or solid-state relays. Screw connection or push-in connection is available as connection technology.

## Relay modules

### Industrial relay system with push-in connection - RIFLINE complete

RIFLINE complete is an inexpensive relay system with various accessories. It consists of DIN rail bases, electromechanical or solid-state relays, plug-in input/interference suppression modules, marking material, and bridging material. The range of accessories is rounded off with a timer module. This can be used to transform a basic relay into a timer relay with three different functions.

The RIFLINE complete relay range consists of seven different base versions from RIF-0 to RIF-4 – these range from one N/O contact up to four PDT contacts. The field of application of this product group ranges from coupling relay applications with switching currents of one milliamp to replacement for miniature contactors with currents up to 16 A.

The relay bases feature push-in connection technology, which enables quick and tool-free conductor contacting. The RIF-1 to RIF-4 bases offer double the contact options on both the input and output side.

On the input side of all bases, the negative potential (A2) can be bridged – regardless of the base size. On the output side, the grouped contact (11) can be bridged within the RIF-0 base version. This connection can also be bridged within the RIF-1 base size.

To offer diverse marking options, the engagement lever can be fitted with a zack marker strip. In addition, marker carriers

can be mounted on the bases so that additional marking surfaces are available.

RIFLINE complete can be extended using many elements from the CLIPLINE complete accessories range. This includes marking material, bridges, and test adapters.

To make ordering and management easy, RIFLINE complete modules are provided in the most popular voltages as complete modules with relay and input/interference suppression module. For individual assembly, tailored to the requirements of the application, additional voltage levels are offered in the modular system.

## Industrial relay system with push-in connection - RIFLINE complete

**RIF-0**

The narrow 6.2 mm RIF-0 base series is designed for miniature relays with one contact. Switching currents up to 6 A are implemented here. Two base versions are available: 1 N/O contact and 1 PDT contact. RIF-0 is therefore a good choice for all coupling applications.

**RIF-1**

The narrow 16 mm RIF-1 base series is designed for miniature relays with 2 contacts. Currents up to 13 A can be switched when using the FBS 2-8 jumper. This is the ideal relay for applications that require coupling, power switching, and signal duplication.

**RIF-2**

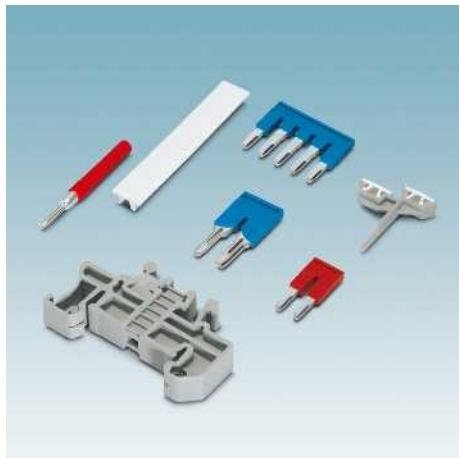

The 31 mm wide RIF-2 base series is designed for industrial relays with up to 4 contacts. Currents up to 12 A are no problem for these bases. This relay is ideal for applications that require power and signal multiplication.

**RIF-3**

The 40 mm wide RIF-3 base series is designed for octal relays with up to 3 contacts. Switching currents up to 10 A can be implemented here. Two base versions are available: 2 PDT contacts and 3 PDT contacts. RIF-3 bases are ideal for all applications that require power and signal multiplication.

**RIF-4**

The 43 mm wide RIF-4 base series is designed for power relays with up to 3 contacts. Currents up to 16 A can be switched. RIF-4 bases are a good choice for applications that require power and signal multiplication, e.g., in miniature contactor applications.

**Accessories**

A wide range of accessories are available for the RIFLINE complete relay system that round off the range. These include bridges, professional marking material, function modules, test plugs, and end brackets.

# Relay modules

## Industrial relay system with push-in connection - RIFLINE complete

### Modular RIF-0 relay base

Relay base that can be fitted with miniature power relays or solid-state relays with a nominal voltage of 12 to 24 V DC.

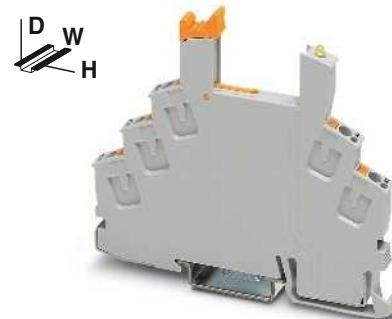

The advantages:

- Integrated freewheeling diode for input circuit and interference suppression circuit
- LED for status display
- Safe isolation according to DIN EN 50178 between coil and contact
- Professional marking material
- Holders for test plugs
- Professional bridging of adjacent modules saves wiring time (A2 and 11/13)
- FBS 2-6 jumpers for the input and output side

# Relay modules

## Industrial relay system with push-in connection - RIFLINE complete

### Plug-in miniature power relays

Plug-in miniature power relays suitable for RIF-0 and PLC-INTERFACE relay bases.

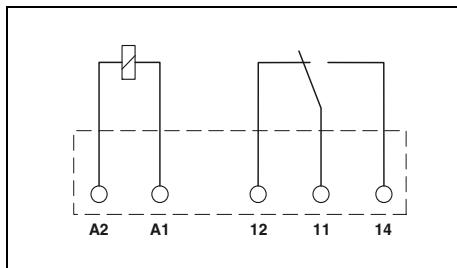

The advantages:

- Power contacts up to 6 A
- Multi-layer gold contact or power contact
- High degree of protection RT III (comparable with IP67)
- Safe isolation according to DIN EN 50178 between coil and contact
- Can be soldered in on PCB

1 PDT

Notes:
If the specified maximum values for multi-layer contact relays are exceeded, the gold plating is destroyed. The maximum values of the power contact relay are then valid. This can result in a shorter service life than with a pure power contact.
For dimensional drawings and perforations for assembly, see page 424

# Relay modules

## Industrial relay system with push-in connection - RIFLINE complete

### Modular RIF-1 relay base

Relay base that can be fitted with 1 or 2 PDT relays or solid-state relays.  
Range of accessories includes:

- Plug-in input and interference suppression module
- Plug-in timer module
- Relay retaining bracket with ejector function and holder for marking material
- Comprehensive range of marking material
- Test plug
- FBS 2-6 jumpers for the input side (A2)
- FBS 2-8 jumpers for the output side

(11/21)

Notes:
Type of insulating housing: Polyamide PA non-reinforced, color: gray.
For further marking systems and mounting material, see Catalog 5.

## Industrial relay system with push-in connection - RIFLINE complete

### Plug-in high-power relays

Plug-in high-power relays with 2 or 3 PDT contacts for the RIF-4 relay base.

The advantages:

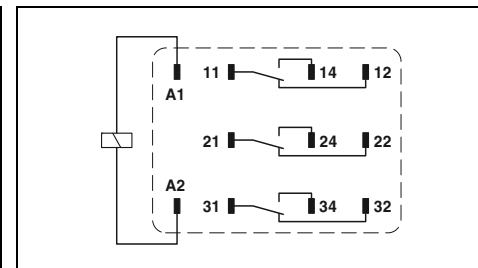

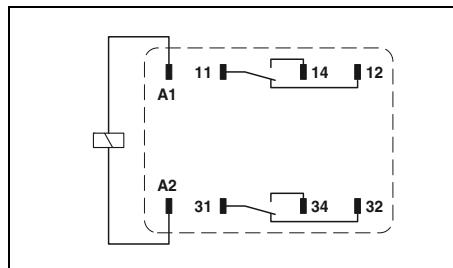

- Use in miniature contactor applications
- Switching current of up to 16 A
- Up to 440 V AC switching voltage

2 PDT relay

3 PDT relay

## Timer relay

### Plug-in timer module for RIF-1, RIF-2, RIF-3, and RIF-4

The multifunctional plug-in timer module transforms the relay module into a timer relay. The RIF-1 to RIF-4 bases can be fitted with this module. Using DIP switches, you can choose from three time ranges and select four time functions. Fine adjustments to the time are made using a potentiometer. Relays can be operated with an input voltage of 24 V AC/DC.

#### Functions:

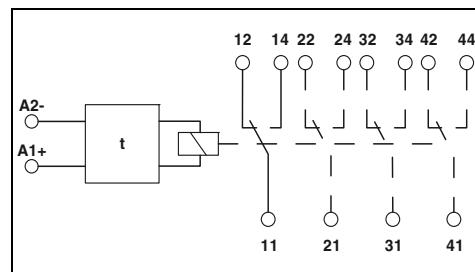

- With switch-on delay
- With passing make contact
- Flasher/pulse generator

#### Time ranges:

- 0.5 s - 10 s
- 5 s - 100 s
- 0.5 min - 10 min
- 5 min - 100 min

Timer module

#### Technical data

##### Input data

Nominal input voltage  $U_N$

# Relay modules

## Industrial relay system with push-in connection - RIFLINE complete

### Fully mounted RIF-2 relay modules

Fully mounted RIF-2 relay modules, consisting of:

- Relay base with push-in connection
- 1 or 2 PDT relay
- Relay retaining bracket
- Input module/interference suppr. module (AC types only)

RIF-2 relay module with  
2 PDT relay

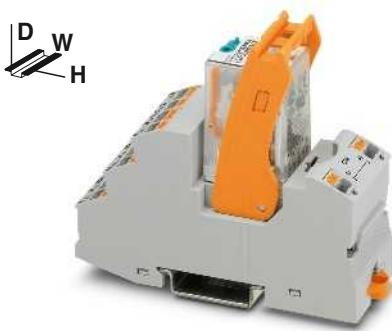

The advantages:

- Relay with lockable manual operation and status LED
- With DC types, freewheeling diode is integrated into relay
- Mechanical switch position indicator
- Logical contact arrangement thanks to 1/3-level relay base
- Professional bridging of adjacent modules saves wiring time
- For FBS 2-6 jumpers for the input side (A2), see page 374.

## Industrial relay system with push-in connection - RIFLINE complete

### RIFLINE complete accessories

#### Jumpers

The jumpers can be used for simple potential distribution via all relay bases.

The end bracket is used for safe isolation between adjacent modules and to visually separate the various function groups.

## Relay modules

### Industrial relay system with screw connection - PR series

The PR series is a low-priced relay modular system, consisting of DIN rail bases, relays, plug-in input/interference suppression modules, engagement levers and the matching marking labels and universal bridging materials for all bases. The modules are largely compatible with the usual standards on the market, have the major international approvals, and are therefore accepted worldwide.

The PR series also boasts its own particular features:

- Relay retaining bracket: the EL... plastic relay retaining brackets, with which the relays can be held and, if necessary, ejected, have an exposed, smooth, large equipment marking area for standard self-adhesive labels that can be printed easily and inexpensively using standard printers. When fitted, the engagement lever is securely connected to the base, which means that the marking cannot be lost.
- Industrial relays: as standard, all REL-IR... industrial relays have an LED status display and all DC types also have an integrated freewheeling diode. In most cases, this eliminates the plug-in input modules that are otherwise also used.
- Plug-in input modules with RC element: most standard input/interference suppression modules with an RC element used for compensation of interference

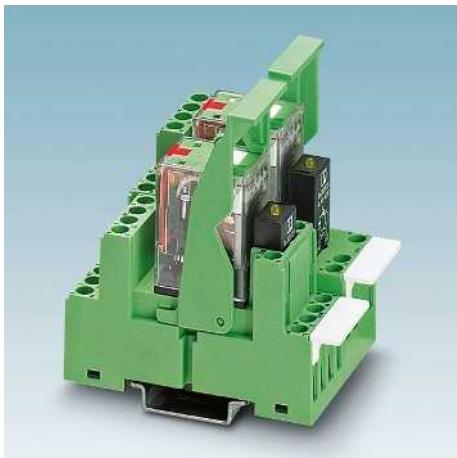

coupling on long lines or in the event of leakage currents from electronic AC outputs have only low capacitance values. This greatly limits the filter effect. In contrast, the RC-120-230UC and RC3-120-230UC plug-in module series for mains voltage applications have a filter function that is improved up to a factor of 10. Unlike with the discharge resistors that are normally used for such applications, using RC plug-in modules does not result in any additional heating.

## Industrial relay system with screw connection - PR series

**PR1 series**

The narrow 16 mm PR1 base series for relays with one or two contacts.

Traditional 2/2-level bases are available and there is also a choice of two modern "logical" 1/3-level versions with fully opposite coil and contact connections.

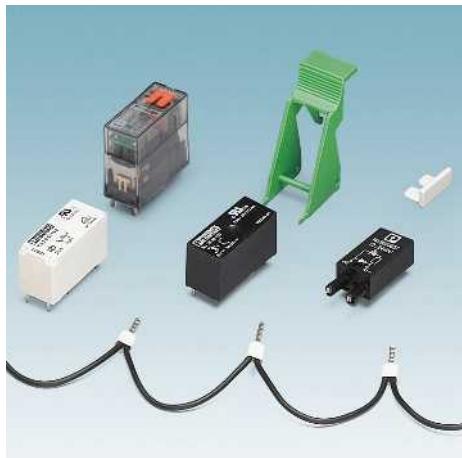

**PR2 series**

The PR2 base series accommodates plug-in industrial relays with two or four PDT contacts.

Just like the PR1 series, the bases are available in traditional 2/2-level and the modern "logical" 1/3-level versions.

**PR3 series**

The robust octal relays with two or three PDT contacts that are widely used in some areas fit on the PR3 base with shock-proof screw connections. All the base connections have a wide connection cross section and are arranged on one level with good accessibility.

The active components of the PR1 modular system include various miniature power relays (optionally available with manual test function) and electronic solid-state relays. Matching relay retaining brackets with integrated marking area prevent them from being shaken loose. Depending on requirements, input/interference suppression modules with various functions can also be plugged in. Marking labels and loop bridges in various colors that are suitable for universal use with all PR bases complete the range of accessories.

The PR2 modular system is specifically designed for plug-in industrial relays. Industrial relays from Phoenix Contact feature the following as standard: a manual test button, switch position indicator, status LED, and freewheeling diode (DC coils only). Interference suppression modules with a varistor or RC element can also be plugged in as an option. Relay retaining brackets with integrated marking areas prevent the relays from being shaken loose. Marking labels and loop bridges in various colors that are suitable for universal use with all PR bases complete the range of accessories.

The PR3 modular system is specifically designed for the robust octal relays. The relays have a switch position indicator and a manual test button and there is a wire bracket to prevent them from being shaken loose. Input/interference suppression modules with various functions can also be plugged in as an option. The base can be marked with an 8 x 20 mm standard adhesive label. Loop bridges in various colors for universal use round off the range of accessories.

## Industrial relay system with screw connection - PR series

### Plug-in miniature power relays

Plug-in miniature power relays with 1 or 2 PDT contacts, suitable for RIF-1, PR1, and PLC-INTERFACE relay bases.

The advantages:

- Power contacts up to 16 A
- Multi-layer gold contact or power contact
- High degree of protection up to RT III (comparable with IP67) depending on type

#### Notes:

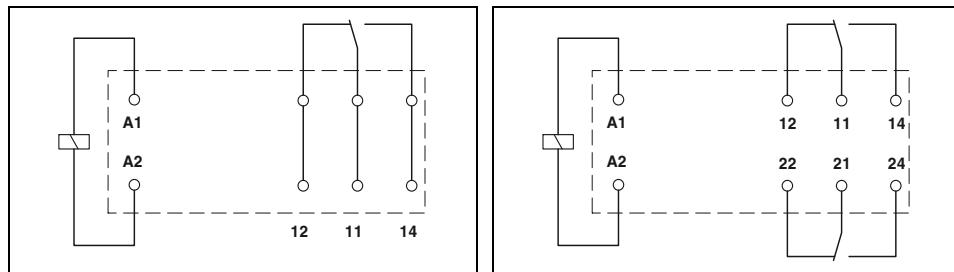

If the specified maximum values for multi-layer contact relays are exceeded, the gold plating is destroyed. The maximum values of the power contact relay are then valid. This can result in a shorter service life than with a pure power contact.

# Relay modules

## Industrial relay system with screw connection - PR series

### Plug-in industrial relays suitable for PR2 relay base

Plug-in industrial relays with 2 or 4 PDT contacts, suitable for PR2 and RIF-2 relay bases.

The advantages:

- With lockable manual operation
- Mechanical switch position indicator
- Integrated status LED
- Multi-layer gold contact or power contact
- DC types with integrated freewheeling diode

#### Notes:

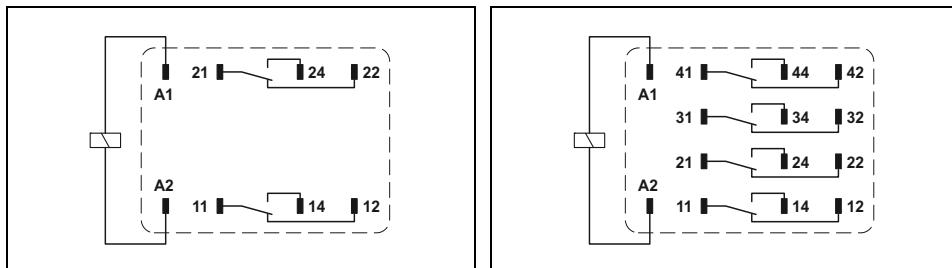

For 48 V DC and 60 V DC types, see phoenixcontact.net/products

2 PDT relay with power contacts

4 PDT relay with multi-layer gold contact

# Relay modules

## Industrial relay system with screw connection - PR series

### Input modules/interference suppression modules for PR1, PR2, and PR3

Plug-in input modules/interference suppression modules for optional fitting of PR... relay bases.

The advantages:

- Attenuation of reverse voltage induced in coil
- Mechanical coding to protect against incorrect connection

**Input/interference suppression module to match PR1 and PR2**

**Input/interference suppression module to match PR3**

The relay bases of the PR1 series can also be equipped with wear-free solid-state relays (OPT... or SIM-EI...) as an alternative to the electromechanical relay.  
LDP... and LV... plug-in modules cannot be used in conjunction with SIM-EI... solid-state relays.

# Relay modules

## Industrial relay system with screw connection - PR series

### Fully mounted PR1 relay modules with screw connection

Fully mounted PR1 relay modules, consisting of:

- Relay base
- 1/2 PDT relay
- Relay retaining bracket
- Input module/interference suppr. module
- Marking labels

The advantages:

- Logical contact arrangement thanks to 1/3-level relay base
- Operational reliability thanks to sealed relay
- Safe isolation between coil and contact side

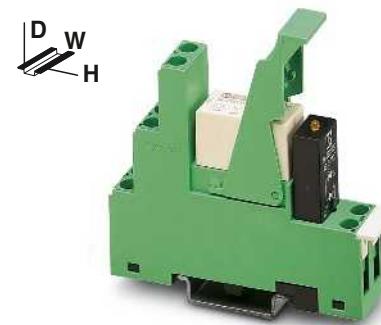

#### Notes:

Type of housing:  
Polyamide fiber reinforced PA-F, color: green.

For the protection of input and output, inductive loads must be damped with an effective protection circuit.

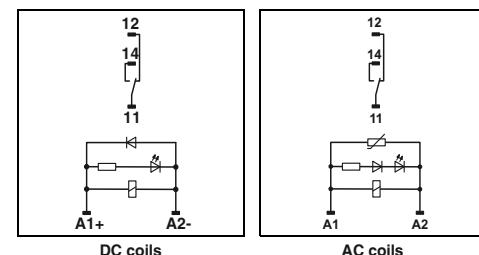

If the specified maximum values for multi-layer contact relays are exceeded, the gold plating is destroyed. The maximum values of the power contact relay are then valid. This can result in a shorter service life than with a pure power contact.

Other input voltages on request.

**PR1 relay module with 1 PDT relay**

### Fully mounted PR2 relay modules

Fully mounted PR2 relay modules, consisting of:

- Relay base
- 2/4 PDT relay
- Relay retaining bracket
- Input module/interference suppr. module (AC types only)
- Marking labels

The advantages:

- Relay with lockable manual operation and status LED
- With DC types, freewheeling diode is integrated into relay
- Mechanical switch position indicator
- Logical contact arrangement thanks to 1/3-level relay base
- 4 PDT types with multi-layer gold contacts

#### Notes:

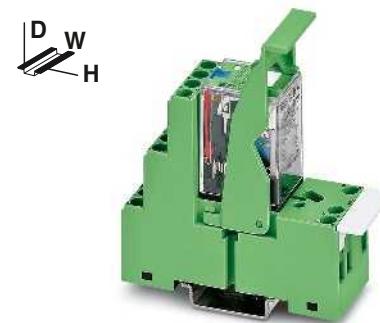

Type of housing:  
Polyamide fiber reinforced PA-F, color: green.

For the protection of input and output, inductive loads must be damped with an effective protection circuit.

If the specified maximum values for multi-layer contact relays are exceeded, the gold plating is destroyed. The maximum values of the power contact relay are then valid. This can result in a shorter service life than with a pure power contact.

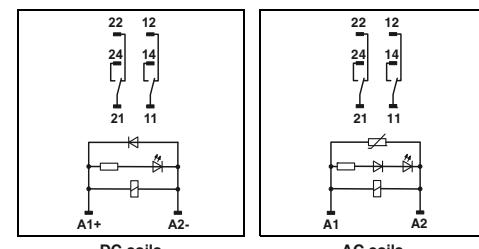

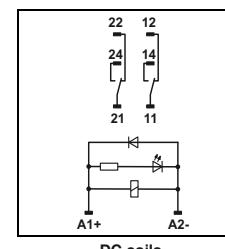

Other input voltages on request.

The DC types do not have a plug-in module because the status LED and the freewheeling diode are integrated directly into the relay.

## Relay modules

### Highly compact relay modules - PLC-INTERFACE

The PLC-INTERFACE relay system is the interface between the controller and system I/O devices.

The universal design is compact and space-saving. While the narrow 6.2 mm module has one contact, the 14 mm version is available with two contacts. The modules can be equipped with either an electromechanical or a solid-state relay.

They are protected against environmental influences by RTIII (IP67). The relays also offer safe isolation according to DIN EN 50178 (VDE 0160).

PLC-INTERFACE is available in three connection technologies. Depending on the usage range, screw or push-in connection can be selected.

In addition to the universal types, PLC-INTERFACE is also available in numerous special versions. These include:

- Sensor and actuator modules that can accommodate all connections directly on the interface

- Modules for high inrush or continuous currents
- Railway modules, which meet specific railway requirements
- Filter modules, which filter out interference on the input side

Jumpers are available for all modules for simple potential distribution. In addition, solutions from system cabling applications offer easy connection to the plant control system. VARIOFACE adapters can be used to reduce wiring effort considerably. Installation is simplified significantly thanks to the integrated input and protective circuit.

Standard marking material from CLIPILINE complete modular terminal blocks can be used to mark PLC-INTERFACE.

## Highly compact relay modules - PLC-INTERFACE

**Universal modules**

PLC-R... and PLC-O... relay and solid-state relay modules with PDT or N/O contact, designed for universal use. Available in an overall width of 6.2 mm with one contact or in 14 mm with two contacts.

Available either with screw or push-in connection.

**Sensors/actuators**

PLC...SEN and PLC...ACT offer space-saving sensor and actuator wiring without additional supply or output terminal blocks. The sensor or actuator connections are incorporated directly at the relay module.

Available either with screw or push-in connection.

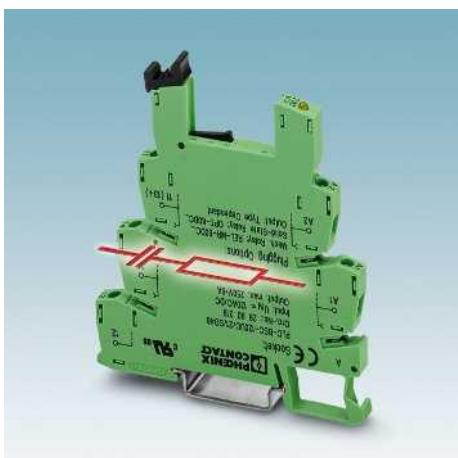

**High currents**

PLC...IC is particularly suitable for applications with high switch-on currents, e.g. from lamp loads. The PLC...HC relay modules are designed for applications with high continuous currents.

Available either with screw or push-in connection.

**Railway applications**

PLC...RW relay or solid-state relay modules are suitable for railway requirements. These cover, for example, the extended temperature and input voltage range of railway applications.

**Interference signals on the input side**

PLC-B...SO46 basic terminal blocks are used for filtering interference currents and interference voltages on the input side.

Available either with screw or push-in connection.

**Accessories**

The entire PLC-INTERFACE system can be extended by a range of accessories such as power terminals, adapters for system cabling or jumpers for potential distribution.

# Relay modules

## Highly compact relay modules - PLC-INTERFACE

### Universal PLC series with PDT relay

PLC-R... is the relay series that can be used universally and consists of basic terminal blocks and plug-in relays with PDT contacts.

The advantages:

- Slim design
- Screw and push-in connection technology
- Functional jumpers
- Integrated input and interference suppression circuit
- RT III sealed relay
- Safe isolation according to DIN EN 50178 between coil and contact
- Efficient connection to system cabling using V8 adapter

#### Notes:

Type of housing:  
Polyamide PA non-reinforced, color: green.

Marking systems and mounting material  
See Catalog 5

Separating plate PLC-ATP must be installed for voltages larger than 250 V (L1, L2, L3) between identical terminal blocks in adjacent modules. Potential bridging is then carried out with FBST 8-PLC... or FBST 500....

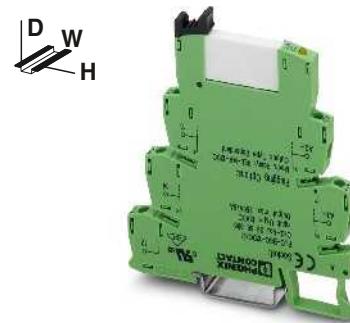

If the specified maximum values for multi-layer contact relays are exceeded, the gold plating is destroyed. The maximum values of the power contact relay are then valid. This can result in a shorter service life than with a pure power contact.

For diagrams of operating voltage ranges, see page 423

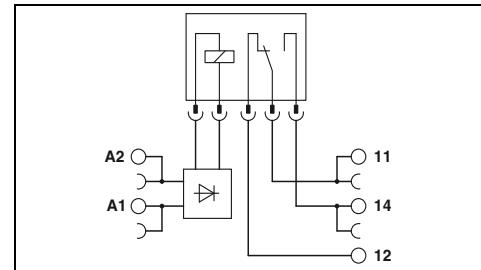

Note: for marking material (ZB 6), see "CLIPLINE industrial connection technology, marking material for terminals, conductors, and cables".

# Relay modules

## Highly compact relay modules - PLC-INTERFACE

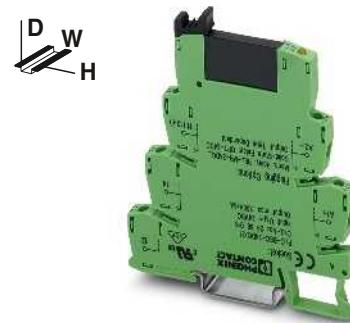

### Universal PLC series with solid-state relays

PLC-O... is the solid-state relay series that can be used universally comprising basic terminal blocks and plug-in solid-state relays.

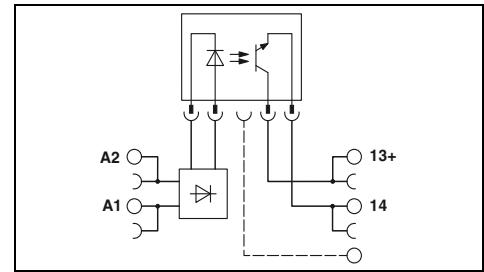

#### The advantages:

- Slim design
- Screw and push-in connection technology
- Functional jumpers
- Integrated input circuit
- RT-III sealed solid-state relays
- High switching capacity
- Zero voltage switch at AC output
- Efficient connection to system cabling using V8 adapter

Notes:
Type of housing: Polyamide PA non-reinforced, color: green.
Marking systems and mounting material See Catalog 5
Separating plate PLC-ATP must be installed for voltages larger than 250 V (L1, L2, L3) between identical terminal blocks in adjacent modules. Potential bridging is then carried out with FBST 8-PLC... or FBST 500....
For derating curves see page 425

# Relay modules

## Highly compact relay modules - PLC-INTERFACE

### PLC actuator series for output functions

PLC actuator series for coupling controller and actuators, such as motors, contactors, valves, etc.

The advantages:

- Actuator connected directly to relay module
- No need for additional modular terminal blocks
- Space savings of up to 80%
- Time savings of up to 60%
- Screw and push-in connection technology
- Relay modules with safe isolation according to DIN EN 50178 between coil and contact
- Functional jumpers
- Efficient connection to system cabling using V8 adapter

#### Notes:

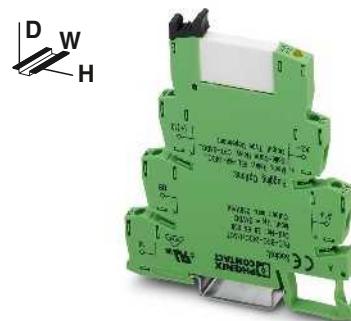

Type of housing:  
Polyamide PA non-reinforced, color: green.

Marking systems and mounting material  
See Catalog 5

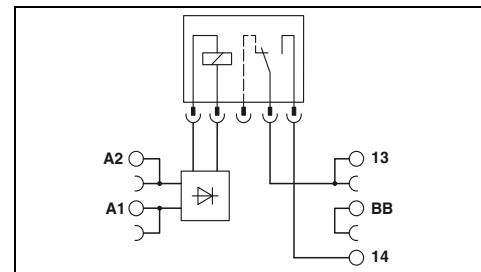

Separating plate PLC-ATP must be installed for voltages larger than 250 V (L1, L2, L3) between identical terminal blocks in adjacent modules. Potential bridging is then carried out with FBST 8-PLC... or FBST 500....

For diagrams of operating voltage ranges, see page 423

For derating curves see page 425

# Relay modules

## Highly compact relay modules - PLC-INTERFACE

### PLC sensor series for input functions

PLC sensor series for coupling controller and sensors, such as proximity switches, limit switches or auxiliary contacts

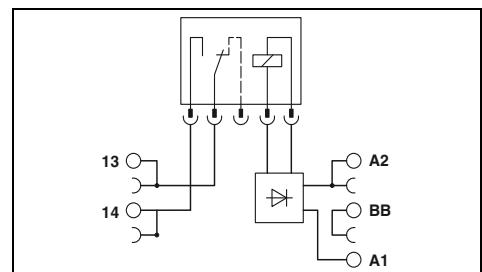

The advantages:

- Direct connection of sensor to relay module
- No need for additional modular terminal blocks
- Space savings of up to 80%
- Time savings of up to 60%
- Screw and push-in connection technology
- Relay modules with safe isolation according to DIN EN 50178 between coil and contact
- Functional jumpers
- Efficient connection to system cabling using V8 adapter

Notes:
Type of housing: Polyamide PA non-reinforced, color: green.
Marking systems and mounting material See Catalog 5
Separating plate PLC-ATP must be installed for voltages larger than 250 V (L1, L2, L3) between identical terminal blocks in adjacent modules. Potential bridging is then carried out with FBST 8-PLC... or FBST 500....
If the specified maximum values for multi-layer contact relays are exceeded, the gold plating is destroyed. The maximum values of the power contact relay are then valid. This can result in a shorter service life than with a pure power contact.
For diagrams of operating voltage ranges, see page 423
1) 120 and 230 V types up to 55 °C

# Relay modules

## Highly compact relay modules - PLC-INTERFACE

### PLC-INTERFACE for high inrush currents

PLC relay modules for high inrush currents due, for example, to capacitive loads

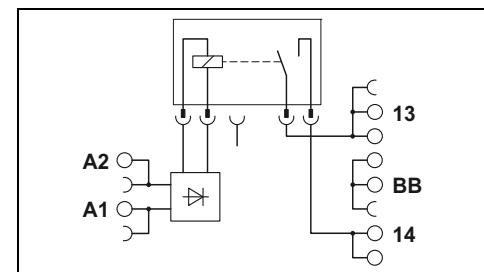

The advantages:

- Max. inrush current of 130 A
- Direct connection of load return line thanks to actuator type
- Screw and push-in connection technology
- Safe isolation according to DIN EN 50178 between coil and contact
- Functional jumpers
- Efficient connection to system cabling using V8 adapter

Notes:
Type of housing: Polyamide PA non-reinforced, color: green.
Marking systems and mounting material See Catalog 5
Separating plate PLC-ATP must be installed for voltages larger than 250 V (L1, L2, L3) between identical terminal blocks in adjacent modules. Potential bridging is then carried out with FBST 8-PLC... or FBST 500....
For diagrams of operating voltage ranges, see page 423

## **Relay modules**

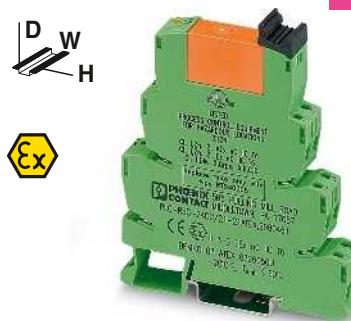

## **Highly compact relay modules - PLC-INTERFACE**

## **PLC-INTERFACE for hazardous areas**

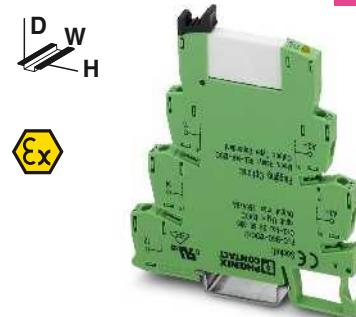

Relay modules with ATEX and/or Class 1, Division 2 approval for potentially explosive applications.

### The advantages:

- Slim design
  - Functional jumpers
  - Integrated input and interference suppression circuit
  - RTIII-sealed relays
  - Safe isolation according to DIN EN 50178 between coil and contact
  - Efficient connection to system cabling using V8 adapter

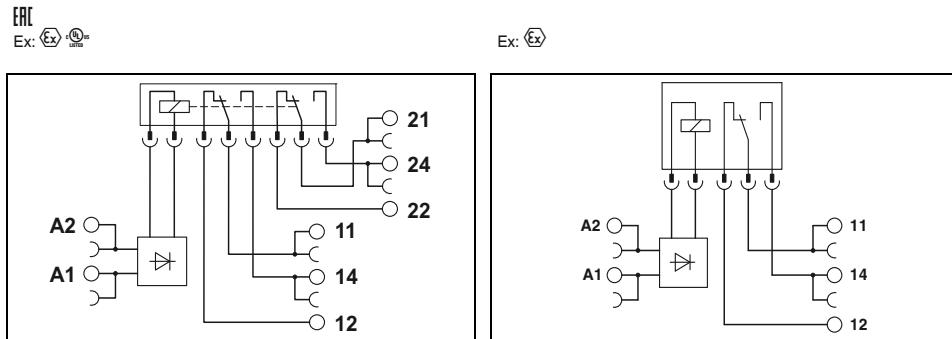

## 2 PDT with power contact

#### **1 PDT with power contact**

<b>Notes:</b>
Type of housing: Polyamide PA non-reinforced, color: green.
Marking systems and mounting material See Catalog 5
Separating plate PLC-ATP must be installed for voltages larger than 250 V (L1, L2, L3) between identical terminal blocks in adjacent modules. Potential bridging is then carried out with FBST 8-PLC... or FBST 500....

# Relay modules

## Highly compact relay modules - PLC-INTERFACE

### Basic terminal blocks with interference current filter that can be fitted with relays

PLC basic terminal blocks with integrated filter to protect against interference voltages or currents due, for example, to long control lines

The advantages:

- Resistant to interference currents

- High relay release voltage

Typical applications:

- Applications with long control lines
- Use of AC output boards, resulting in residual AC currents
- Screw and push-in connection technology

#### Notes:

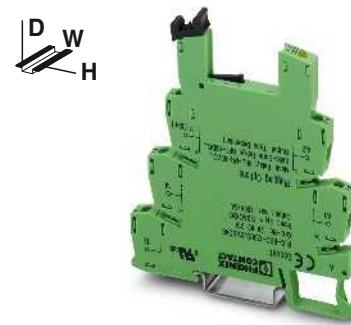

Type of housing:  
Polyamide PA non-reinforced, color: green.

Marking systems and mounting material  
See Catalog 5

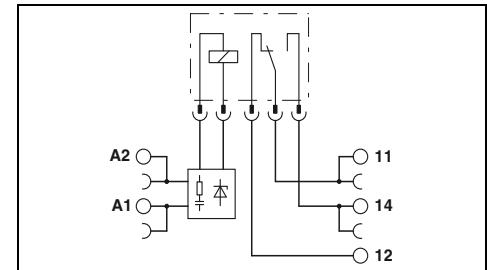

Separating plate PLC-ATP must be installed for voltages larger than 250 V (L1, L2, L3) between identical terminal blocks in adjacent modules. Potential bridging is then carried out with FBST 8-PLC... or FBST 500....

For diagrams of operating voltage ranges, see page 423

## **Relay modules**

## **Highly compact relay modules - PLC-INTERFACE**

## **Plug-in miniature power relays**

Plug-in miniature power relays suitable for PLC-INTERFACE and RIF-0, RIF-1, and PR1 relay bases.

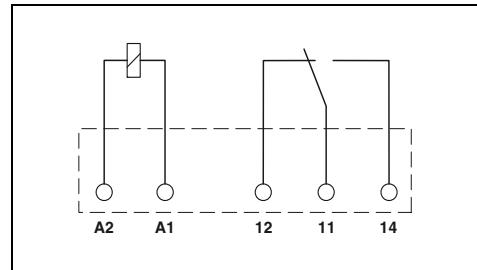

## The advantages:

- Power contacts up to 16 A
  - Multi-layer gold contact or power contact
  - High degree of protection up to RT III  
(comparable with IP67) depending on type
  - Safe isolation according to DIN EN 50178 between coil and contact

<b>Notes:</b>
If the specified maximum values for multi-layer contact relays are exceeded, the gold plating is destroyed. The maximum values of the power contact relay are then valid. This can result in a shorter service life than with a pure power contact.
For dimensional drawings and perforations for assembly, see page 424
For diagrams of operating voltage ranges, see page 423

# Relay modules

## Highly compact relay modules - PLC-INTERFACE

### Plug-in solid-state relays

Plug-in solid-state relays suitable for PLC-INTERFACE and RIF-0, RIF-1, and PR1 relay bases.

The advantages:

- Switching capacity of up to 24 V DC/5 A
- RT III wash tight (comparable to IP67)
- Vibration and shock-resistant
- Wear-free and long-lasting
- Zero voltage switch at AC output
- Can be soldered in on PCB

#### Notes:

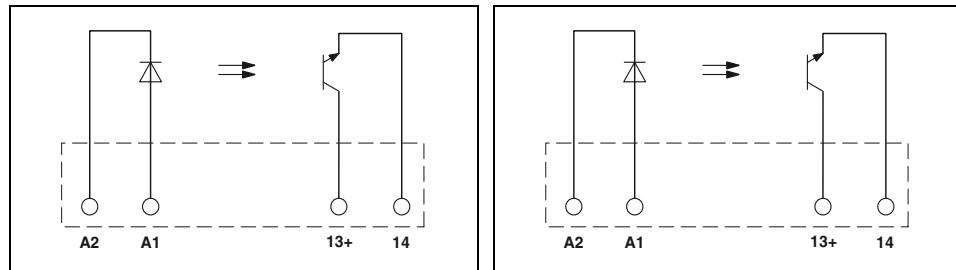

For dimensional drawings and perforations for assembly, see page 425

**Operating voltage ranges for  
PLC-INTERFACE, 6.2 mm versions,  
equipped with relay**

**Operating voltage ranges for  
PLC-INTERFACE, 14 mm versions,  
equipped with relay**

**General conditions:**  
Direct alignment in the block, all devices 100% operating time, horizontal or vertical mounting.  
**Curve A**  
Maximum permitted continuous voltage  $U_{max}$  with limiting continuous current on the contact side (see relevant technical data).  
**Curve B**  
Minimum permitted pick-up voltage  $U_{op}$  after pre-excitation<sup>1)</sup> (see relevant technical data).  
<sup>1)</sup> **Pre-excitation:** relay has been operated in a thermally steady state at the ambient temperature  $T_A$  with nominal voltage  $U_N$  and limiting continuous current on the contact side (see relevant technical data) (warm coil). After being switched off for a short time, the relay must reliably pick up again at  $U_{op}$ . The  $U_{op}$  values for cold coils ( $T_{coil} = T_A = 20^{\circ}\text{C}$ ) indicated by other manufacturers yield better values, but are not practical.

State diagram

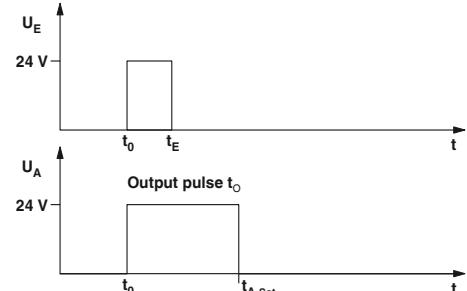

Operating state	Switching level Input	Light indicator, yellow LED	Light indicator, red LED	Alarm contact/CONTROL
Not activated	L	L	L	—
Normal operation	H	H	L	—
Overload/short circuit	H	H	H	—t
Open circuit	L	L	H	—t

**UEGM-OE/AV logic pulse expansion module**

Time diagrams for UEGM-OE/AV-24DC/24DC/100

Scenario 1: input pulse  $t_i < t_{O \text{ set}}$ 

Operating voltage present

Scenario 2: input pulse  $t_i \geq t_{O \text{ set}}$ ;  $t_i = t_O$ 

Operating voltage present

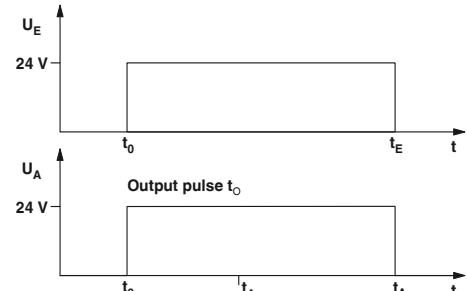

Table of adjustable output pulse lengths

	DIP switches <sup>1)</sup>							
	S1	S2	S3	S4	S5	S6	S7	S8
Length of output pulses [ms] (when in "on" switch position)	10	—	—	—	—	—	—	—
	—	20	—	—	—	—	—	—
	—	—	50	—	—	—	—	—
	—	—	—	100	—	—	—	—
	—	—	—	—	200	—	—	—
	—	—	—	—	—	500	—	—
	—	—	—	—	—	—	1000	—
	—	—	—	—	—	—	—	1500

<sup>1)</sup> If no switch is actuated, the output voltage is not defined.

If the input pulse is longer than the set time, the output is switched off almost simultaneously with the input.

Intermediate values can be obtained by combining several DIP switches according to the following formula:

$$T_{\text{tot}} = \frac{1}{\frac{1}{t_1} + \frac{1}{t_2} + \dots + \frac{1}{t_n}} \cdot 1$$

# Relay modules

## Highly compact relay modules - PLC-INTERFACE

### PLC-INTERFACE with two integrated relays

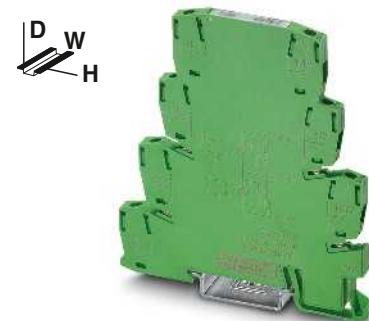

Relay module with two permanently soldered-in power relays

The advantages:

- 100% more channel density than the conventional 6.2 mm relay
- Two switching channels in a 6.2 mm housing
- Integrated input circuit/protective circuit
- Safe isolation according to DIN EN 50178 between coil and contacts and between contacts
- Screw and push-in connection technology

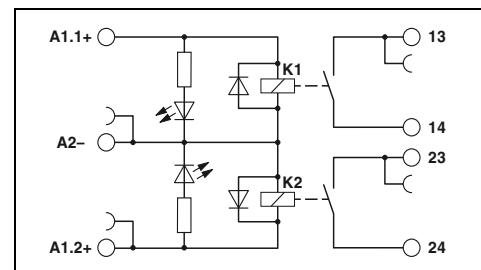

#### Notes:

Type of housing:  
Polyamide PA non-reinforced, color: green.

#### Technical data

<b>Input data</b>	
Typ. input current at $U_N$	[mA]
Response/release time at $U_N$	[ms]
Input circuit DC	4 / 6
<b>Output data</b>	Yellow LED, protection against polarity reversal, freewheeling diode
Contact material	①
Max. switching voltage	7
Min. switching voltage	4 / 6
Limiting continuous current	AgNi
Min. switching current	250 V AC/DC
General data	24 V AC/DC
Test voltage input/output	3.5 A
Test voltage output/output	5 mA
Ambient temperature (operation)	3 kV AC (50 Hz, 1 min.)
Mechanical service life	3 kV AC (50 Hz, 1 min.)
Standards/regulations	-20 °C ... 60 °C
Connection data solid / stranded / AWG	$2 \times 10^7$ cycles
Dimensions	IEC 60664, EN 50178, IEC 62103
EMC note	0.14 - 2.5 mm <sup>2</sup> / 0.14 - 2.5 mm <sup>2</sup> / 26 - 14
	6.2 mm / 80 mm / 86 mm
	Class A product, see page 625

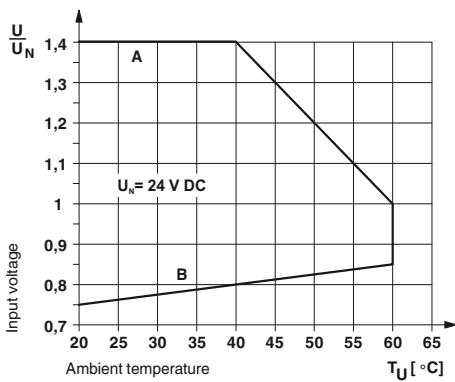

#### Ordering data

Description	Input voltage $U_N$	Type	Order No.	Pcs. / Pkt.
PLC-INTERFACE, with screw connection	① 24 V DC	PLC-2RSC-24DC/1	2987309	10
PLC-INTERFACE, with push-in connection	① 24 V DC	PLC-2RPT-24DC/1	2901639	10

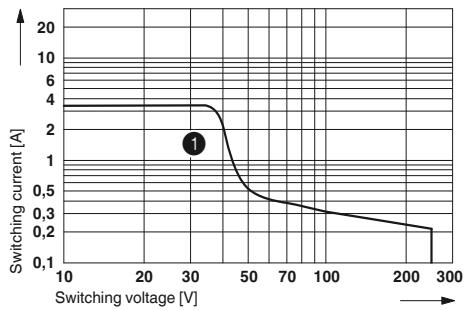

## Application example for PLC-2RS...24DC/1

## Operating voltage range

## Interrupting rating

① DC, ohmic load

# Relay modules

## Highly compact relay modules - PLC-INTERFACE

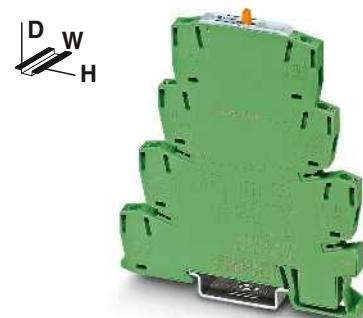

### PLC-INTERFACE with manual switch and relay

Relay module with manual switch and integrated power relay for manual, zero, and automatic functions

#### The advantages are:

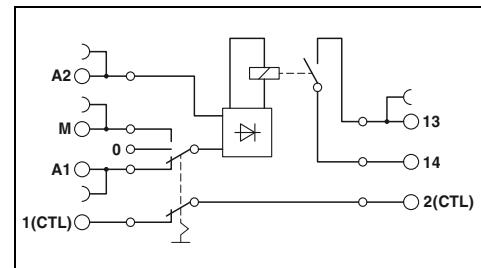

- Max. switching current of 6 A
- Only 6.2 mm wide
- Floating confirmation contact
- Safe isolation according to DIN EN 50178 between coil and contact
- Screw and push-in connection technology

Notes:	
Type of housing:	Polyester PBT non-reinforced, color: green.
Marking systems and mounting material	See Catalog 5
For the protection of input and output, inductive loads must be damped with an effective protection circuit.	
Separating plate PLC-ATP is to be used in the following cases:	always at the start and end of a PLC terminal strip, for voltages greater than 250 V (L1, L2, L3) between the same terminal points of neighboring modules (potential bridging then takes place with FBST 8-PLC... or FBST 500...) and with safe isolation between neighboring modules.
Module height:	PLC-...-S/H = 90 mm; PLC-...-S/L: = 86 mm
PLC...H	- manual operation
PLC...L	- operation using screwdriver

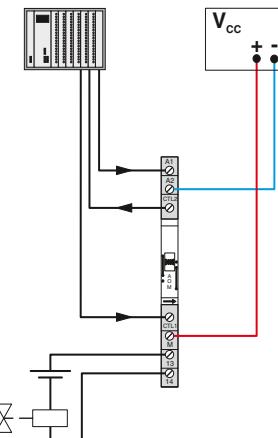

Relay module with manual switch and integrated relay

# Relay modules

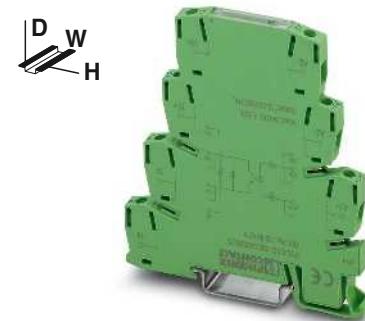

## Highly compact relay modules - PLC-INTERFACE

### PLC-INTERFACE for the TTL signal at input

The PLC-BS...TTL/1 basic terminal block is controlled using a TTL (5 V) input signal and can be equipped with a mechanical relay or a solid-state relay as an option. The basic terminal block equipped with a robust miniature relay offers the following advantages:

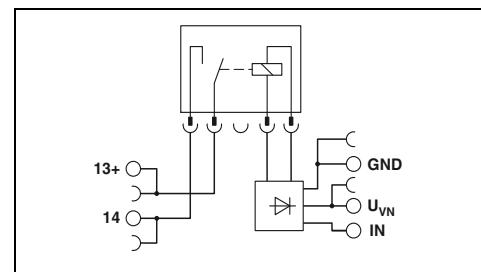

- 6.2 mm slim overall width
- Bridging options
- Status display
- RTIII degree of protection
- Safe isolation in accordance with EN 50178 (VDE 0160)
- 4 kV<sub>rms</sub> electrical isolation between coil and contact
- Screw and push-in connection technology

Notes:
Type of housing: Polyester PBT non-reinforced, color: green.
Marking systems and mounting material See Catalog 5

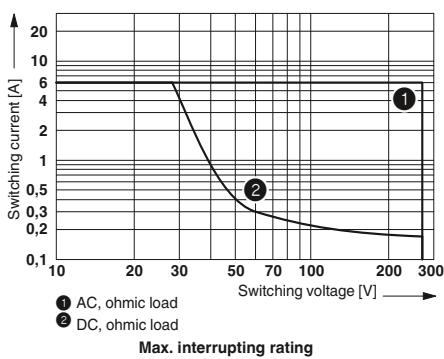

Basic terminal block, for fitting with relay for TTL (5 V)

## Highly compact relay modules - PLC-INTERFACE

**PLC-INTERFACE for the TTL signal at input**

The PLC-BS...TTL/1 basic terminal block is controlled using a TTL (5 V) input signal and can be equipped with a mechanical relay or a solid-state relay as an option. The basic terminal block equipped with a solid-state relay offers the following advantages:

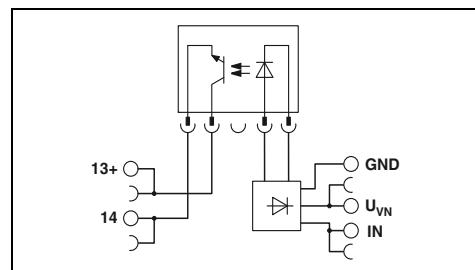

- 6.2 mm slim overall width
- Bridging options
- Status display
- IP67-protected solid-state relay electronic unit
- Switching capacity of up to 24 V DC/3 A
- Alternative input or power solid-state relay
- Wear-free and output-free
- Integrated protective circuit
- 2.5 kV<sub>rms</sub> electrical isolation between input and output
- Screw and push-in connection technology

Notes:
Type of housing: Polyester PBT non-reinforced, color: green.
Marking systems and mounting material See Catalog 5
For derating curves see page 425

## Highly compact relay modules - PLC-INTERFACE

### PLC-INTERFACE for the TTL signal at output

The PLC-OS...24DC/TTL with a built-in solid-state relay can be used for fast and wear-free switching of TTL (5 V) signals.

The module offers the following advantages:

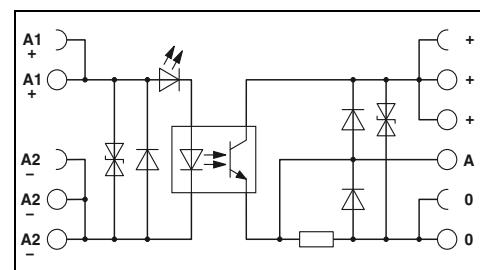

- Switching capacity TTL (5 V), fan out = 1
- 6.2 mm slim overall width
- Bridging options
- Status display
- Integrated protective circuit
- Screw and push-in connection technology

## PLC RELAY with solid-state relays for railway applications

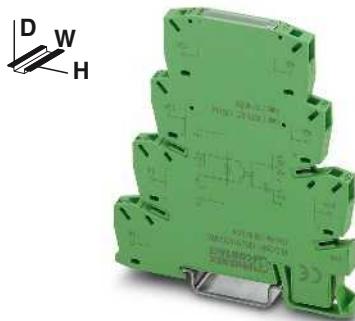

The PLC-OSP...RW interface modules are intended for use as per DIN EN 50155 (VDE 0115 Part 200) "Railway applications, Part 200: Electronic equipment used on rolling stock".

The advantages:

- Temperature range -25°C to +70°C
- Input voltage range 0.7-1.25 x U<sub>N</sub>
- Shock resistance in acc. with DIN 50155 (requirements in acc. with EN 61373)
- Spring-cage and push-in connection technology

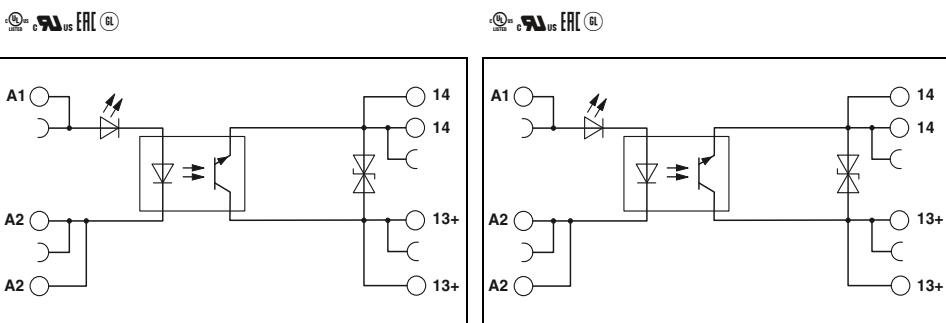

Power solid-state relay with DC voltage output, max. 3 A

# Relay modules

## Highly compact relay modules - PLC-INTERFACE

### PLC-INTERFACE for railway applications

Relay modules with extended input voltage and temperature range, specifically for use in railway applications

The advantages:

- Temperature range -25°C to +70°C
- Input voltage range 0.7 to 1.25 x UN
- Vibration and shock resistance according to EN 50155
- Safe isolation according to DIN EN 50178 between coil and contact
- Push-in connection technology

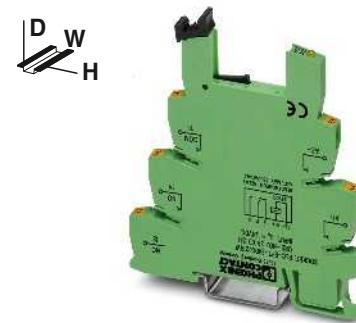

#### Notes:

Type of housing:  
Polyamide PA non-reinforced, color: green.

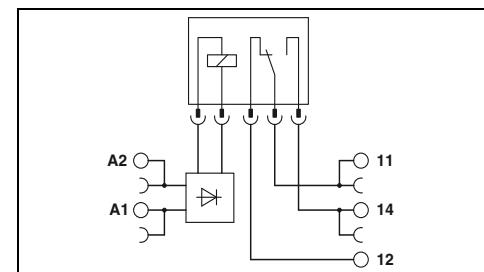

Marking systems and mounting material  
See Catalog 5

Separating plate PLC-ATP must be installed for voltages larger than 250 V (L1, L2, L3) between identical terminal blocks in adjacent modules. Potential bridging is then carried out with FBST 8-PLC... or FBST 500....

If the specified maximum values for multi-layer contact relays are exceeded, the gold plating is destroyed. The maximum values of the power contact relay are then valid. This can result in a shorter service life than with a pure power contact.

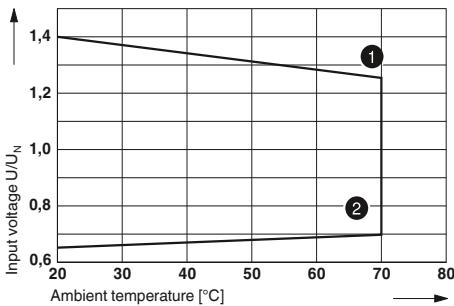

**Basic terminal block for fitting with 1 PDT relay**

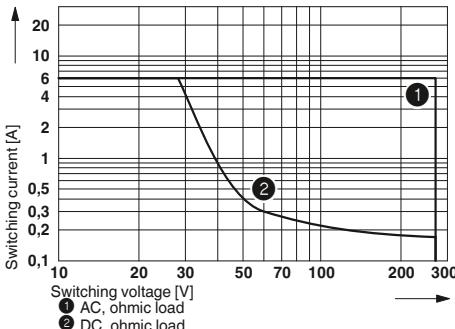

#### Technical data

#### Permitted input voltage range for PLC-BSP-24DC/21RW (with REL-MR-18DC/21... relay)

## PLC-INTERFACE for railway applications

Relay module for input voltages with a nominal frequency of 16.7 Hz

The advantages:

- Input nominal frequency 16.7 Hz
- Vibration and shock resistance according to EN 50155
- Safe isolation according to DIN EN 50178 between coil and contact
- Push-in connection technology

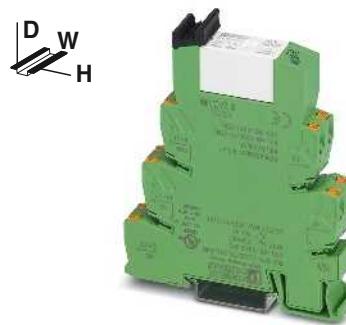

### Notes:

Type of housing:  
Polyamide PA non-reinforced, color: green.

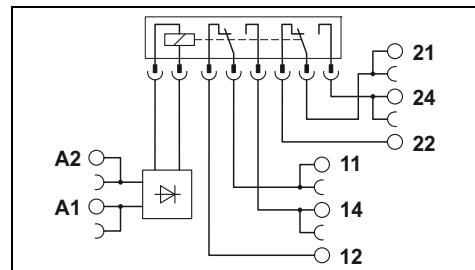

Marking systems and mounting material  
See Catalog 5

Separating plate PLC-ATP must be installed for voltages larger than 250 V (L1, L2, L3) between identical terminal blocks in adjacent modules. Potential bridging is then carried out with FBST 8-PLC... or FBST 500....

If the specified maximum values for multi-layer contact relays are exceeded, the gold plating is destroyed. The values in parentheses then apply for further operation. This can result in a shorter service life than with a pure power contact.

## Highly compact relay modules - PLC-INTERFACE

### PLC electronic sensor terminal block for NAMUR proximity sensors

The PLC-...-EIK 1-SVN electronic sensor terminal block converts the changeable resistance of a NAMUR sensor unit into a digital signal that can be read by all PLCs.

In addition, the electronics unit monitors the sensor side for short-circuit or open circuit and reports this error via an integrated LED.

Due to a corresponding resistance circuit, the PLC-...-EIK 1-SVN can be used to monitor all mechanical switches (N/C contact or N/O contact) for short-circuit and/or open circuit.

In addition to a high packing density, this switching amplifier features the following:

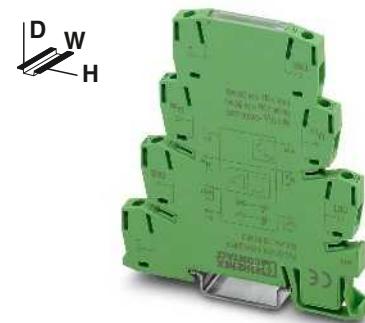

- Regulated power supply for the NAMUR proximity switch
- 24 V/50 mA digital output for directly connecting programmable logic controls
- Connection option for PLC-V8 adapter
- Screw and push-in connection technology

#### Notes:

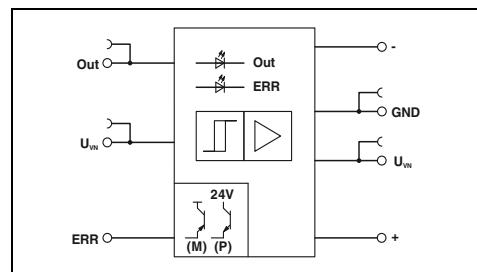

Type of housing:  
Polyamide PA non-reinforced, color: green.

Marking systems and mounting material  
See Catalog 5

Separating plate PLC-ATP is to be used in the following cases:  
always at the start and end of a PLC terminal strip, for voltages greater than 250 V (L1, L2, L3) between the same terminal points of neighboring modules (potential bridging then takes place with FBST 8-PLC... or FBST 500...) and with safe isolation between neighboring modules.

For inductive proximity sensors  
acc. to NAMUR, with light indicators  
for sensor signal and faults

**PLC series****Electronic reversing load relay for DC motors**

The PLC-S...-ELR W 1/2-24DC electronic reversing load relays are used to switch mechanically commutated DC motors up to 24 V/2 A.

- Wear-free reversing
- Braking by controlling both inputs
- Short-circuit and surge and overload-proof output
- Integrated locking circuit and load wiring
- Screw-type, spring-cage, and push-in technology

**Notes:**

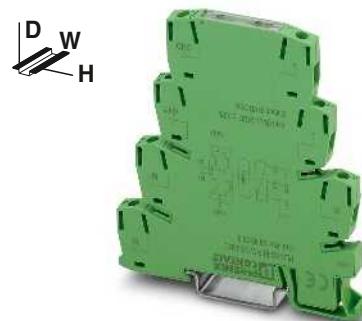

Type of housing:

# Relay modules

## Highly compact relay modules - PLC-INTERFACE

### PLC accessories

The **PLC-ESK** power terminal helps in supplying the bridge potentials, the **PLC-ATP** partition plate helps in optical and safe disconnection of the adjacent PLC modules. The **PLC-BP (A1-14)** passive feed-through bridge is used instead of a relay and connects the A1 and 14 terminal points.

		Ordering data		Ordering data

# Relay modules

## Programmable logic relay system - PLC logic

### Extremely compact control

The PLC logic programmable logic relay system is the extremely compact way to carry out small automation tasks easily and flexibly. It consists of the PLC-V8 logic modules, the PLC-INTERFACE relay system, and the LOGIC+ software. The logic modules are simply plugged into a row of eight PLC-INTERFACE terminal blocks and combine the logic and interface level in one unit. Depending on the switching requirements, plug-in electromechanical and solid-state relays can be combined in order to flexibly switch and control the I/O signals.

PLC logic processes digital and analog input signals as well as logic functions and timer modules - and replaces conventional switching and control devices. Up to 16 I/O signals can be processed using the stand-alone logic modules - that's with an overall width of just 50 mm. If more I/O signals are required, a maximum of 48 I/O signals can be linked using the basic and extension modules.

### Switching and controlling with plug-in relays

- PLC logic brings together the standard combination of logic module and separate plug-in relay and eliminates wiring effort and additional switching elements
- Convenient connections with screw or push-in connection technology, which also accommodate return conductors, eliminate the need for separate potential terminal blocks
- Each relay channel can be freely configured as an input or output. PLC logic therefore perfectly adapts to fit the application at hand

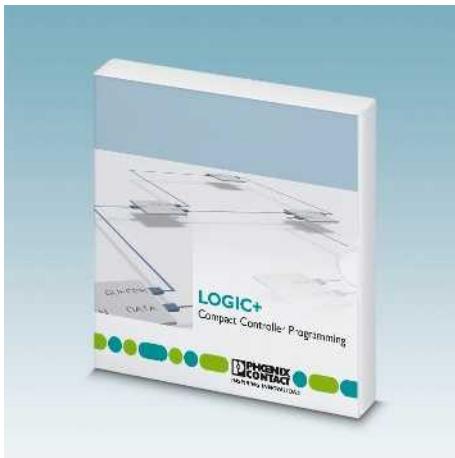

### Intuitive programming

Programming is quick and easy with the intuitive LOGIC+ programming software. Ladder (LD) and function block diagrams (FBD) can be created by selecting the relevant functions and their connection using drag & drop. The graphical representation of PLC logic in the hardware editor supports intuitive operation. The programs created can be simulated offline on the PC and tested online during operation. Basic functions, such as AND, OR, NOT, etc. are complemented by special functions, such as counters, seven-day timers, timer modules, and mathematical functions, to name a few.

### Logic module with plug-in relays

PLC logic combines a logic module and plug-in relay and eliminates wiring effort and additional switching elements. Each relay channel can be flexibly equipped with an electromechanical or a solid-state relay. PLC logic processes 16 I/O signals with just one logic module and boasts an extremely compact overall width of just 50 mm.

### Intuitive programming with LOGIC+

- Function block diagram or ladder diagram
- Numerous integrated function blocks
- Specific function blocks are available to download
- Hardware view in the program
- Can be downloaded free of charge

**i** Your web code: #0139

### Standard programming cable

PLC logic is connected to a PC via a standard micro USB cable. The drivers for PLC logic can be downloaded at [phoenixcontact.com](http://phoenixcontact.com).

### Easily connect extension modules

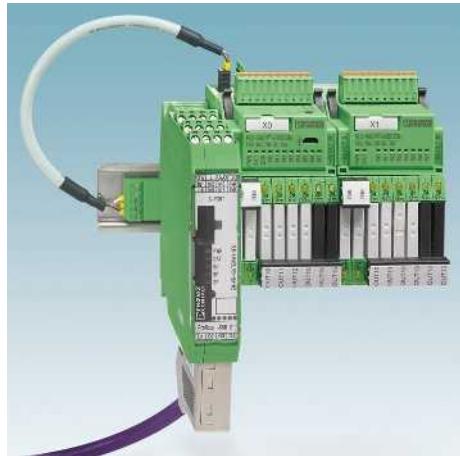

The basic module and the extension module are connected via integrated connectors - no tools required. A maximum of two extension modules can be connected to a basic module. This means that PLC logic can work with up to 48 I/Os.

### Saving and copying data

PLC logic programs are saved by the memory module or can be easily copied to other devices.

If settings such as time or date are required on the new device, these values can be configured via the integrated web server. The new device does not need access to the LOGIC+ software for this.

### Integration into common bus systems

PLC logic is integrated into various networks via optional adaptable fieldbus gateways. This enables bidirectional communication with a higher-level controller for remote control as well as diagnostics and visualization.

Gateways are available for transmitting data via PROFIBUS DP, RS-232, RS-485, Modbus/TCP, DeviceNet™, CANopen®, PROFINET, and EtherNet/IP™.

# Relay modules

## Programmable logic relay system - PLC logic

### Logic modules

PLC-V8C are the plug-in logic modules which form the PLC logic relay system in conjunction with the narrow 6.2 mm PLC-INTERFACE terminal blocks. Eight freely-selectable PLC-INTERFACE terminal blocks must be separately ordered for each logic module. You can find an overview of matching PLC-INTERFACE terminal blocks on page 458.

All logic modules feature these properties:

- 8 integrated digital inputs (of which two inputs are configurable as analog inputs), connection via connector with screw or push-in connection technology
- A further 8 channels can be configured with matching PLC-INTERFACE terminal blocks as digital inputs or outputs
- Programming with the LOGIC+ software

#### PLC-V8C.../SAM

- Stand-alone logic module with 16 I/Os, not extendable
- Connection to PC via micro USB socket
- Integrated realtime clock (RTC)
- Accommodates external IFS-CONFSTICK memory module

#### PLC-V8C.../BM

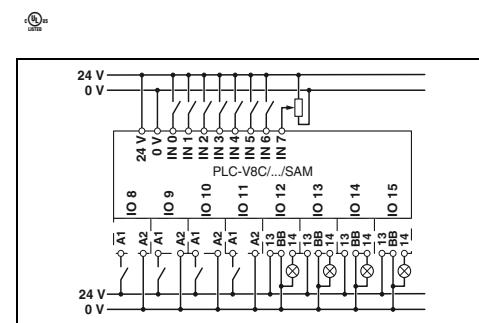

- Basic logic module with 16 I/Os, can be extended with a maximum of two extension modules (PLC-V8C.../EM) to 48 I/Os
- Connection to PC via micro USB socket
- Integrated realtime clock (RTC)
- Accommodates external IFS-CONFSTICK memory module
- Optional connection to IFS gateways

#### PLC-V8C.../EM

- Extension logic module with 16 I/Os, for extending the basic module

Stand-alone module

### IFS gateways

The gateways are connected to the PLC-V8C.../BM PLC logic basic modules via the ME 22,5 TBUS... DIN rail connector and the PLC-V8C/CAB... connecting cable.

The gateways are connected to a PC and configured via the integrated S-PORT interface and the IFS-USB-DATACABLE.

## LOGIC+ programming software

### Integrated web server

- PLC logic basic settings are easily configured via the integrated web server.
- The LOGIC+ software does not need to be installed in order to do so.
- Time and date
- Password and access control
- Firmware update
- Status indicators for inputs and outputs
- General device information

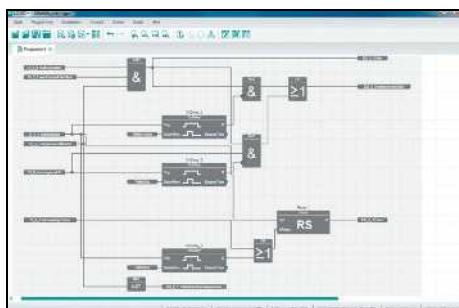

### LOGIC+ user interface

- Clear separation in program editor, toolbox, hardware view, and signaling window
- All elements can be easily placed using drag & drop
- Notes and errors are highlighted in color in the program editor

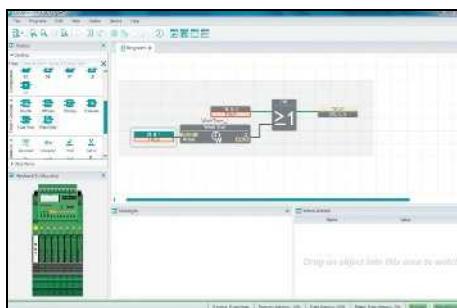

### Hardware configurator

- Each relay channel can be configured as an input or output with an electromechanical or a solid-state relay
- Clear assignment of the inputs and outputs thanks to the graphical representation of the hardware connections

### Function blocks

- Basic functions: AND, OR, NOT, XOR
- Mathematical functions: add, divide, multiply, subtract, generate absolute value
- Positive and negative edge detection
- RS and SR flip-flops
- Switch-on and switch-off delay, pulse encoder, pulse stretching, weekly clock timer
- Up and down counter
- Analog and digital comparators
- Special functions, e.g., solar altitude calculations are available for download

### Simulation and online values

- Offline simulation:
- Simulation of the created program directly in LOGIC+
  - Virtualization of the values in the program editor, hardware view, and in the observation window
- Online values:
- Representation of the program running on the hardware in LOGIC+ with online values
  - Overwriting of values from LOGIC+

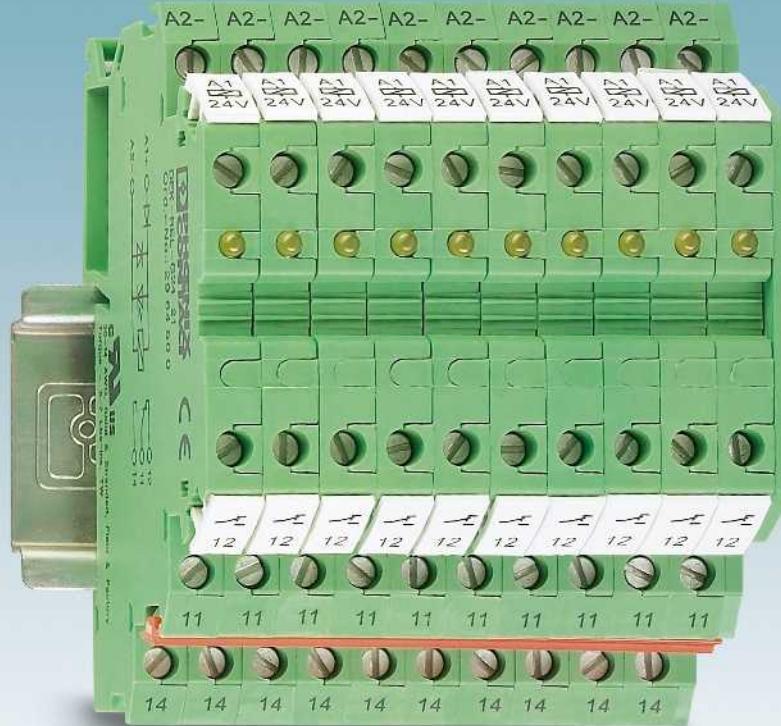

### Example programs

- Numerous application examples make it easy to get started with LOGIC+. These include:
- Underground garage ventilation
  - Conveyor belt
  - Pumping plant
  - Two-way control
  - Tips for creating shift registers or surge relays

## Relay modules

### Relay modules in terminal block design - DEK series

The DEK interface terminal blocks from Phoenix Contact provide complete interface functions in modular terminal block housing that is just 6.2 mm wide. In conjunction with standard terminal block accessories, these high capacity interfaces have not only the design but also the high level of user convenience of modular terminal blocks.

The main common feature of all Phoenix Contact interface terminal blocks is their width of just 6.2 mm. This saves 60% space in the control cabinet in comparison to conventional 15 mm wide coupling relays from modular systems.

The DEK range offers the best solution for all industrial voltages both for signal input and output.

High switching capacities are a matter of course for the DEK-REL... relay terminal block and the DEK-OV... solid-state relay terminal block.

The DEK-OV... wear-free power solid-state relay terminal block is used for applications that require a greater switching frequency in which electromechanical relays reach the end of their service life in a short time.

Integrated LEDs clearly indicate the switching status of the electronic terminal blocks and provide an excellent overview of the coupling level and the system.

EB-DIK colored insertion bridges for the supply and ground signals make it possible to design the circuit simply and effectively.

Integrated protective circuits such as freewheeling diodes, polarity reversal protection diodes, and surge protection elements protect the coupling modules and ensure optimum availability of the system.

## Relay modules in terminal block design - DEK series

## DEK-REL... relay terminal block

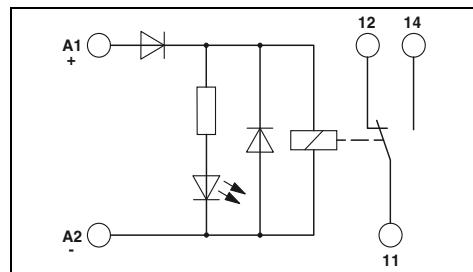

The Phoenix relay terminal block with PDT contact offers the following advantages:

- Width of just 6.2 mm
- High switching capacity of 250 V AC / 6 A
- Less storage, since PDT, N/O or N/C contacts can be wired
- Minimal wiring effort due to the use of EB-DIK insertion bridges
- IP67 protected relay housing
- Cadmium-free relay contacts
- 4 kV electrical isolation of input and output
- Safe isolation in acc. with DIN EN 50178 (VDE 0160)
- Light indicator for indicating the switching status

Notes:
Type of housing: Polyamide PA non-reinforced, color: green.
Marking systems and mounting material See Catalog 5
For the protection of relay coils and contacts, inductive loads must be damped with an efficient protection circuit.
For other EB...DIK... insertion bridges refer to page 467

For medium to large loads  
1 PDT (21)

# Relay modules

## Relay modules in terminal block design - DEK series

### DEK-REL-24/1/SEN input interface and DEK-REL-24/1/AKT output interface

In addition to the familiar advantages of the DEK-REL... electronic terminal blocks, such as:

- 2-layer contact with hard gold-plating for universal applications from 1 mA to 5 A continuous current
- 2 kV<sub>rms</sub> electrical isolation of input and output
- Integrated input circuit

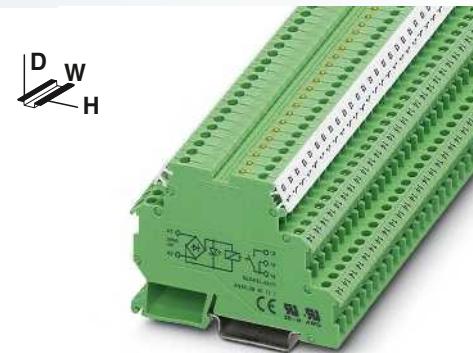

With this terminal block, "ALL" connections for a sensor or actuator are provided over a width of just 6.2 mm!

This means that 16 outputs take up a total overall width of just 105.4 mm (including the power terminal).

Advantages:

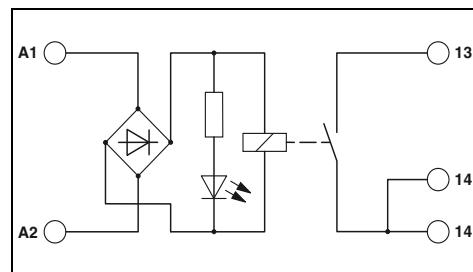

- Lower costs as the N terminal block is no longer required
- Wiring is reduced to a minimum
- Up to 73% more space

Notes:
Type of housing: Polyamide PA non-reinforced, color: green.
Marking systems and mounting material See Catalog 5
For the protection of relay coils and contacts, inductive loads must be dampedened with an efficient protection circuit.

# Relay modules

## Relay modules in terminal block design - DEK series

### DEKOE... and DEK-OV... solid-state relay terminal blocks

Phoenix Contact DEK-OE and DEK-OV interface terminal blocks are only 6.2 mm wide but still provide a complete input or output interface with:

- Electrical isolation between input and output at up to 2.5 kV<sub>rms</sub>
- Integrated input circuit
- Status display
- EB-DIK insertion bridges
- Marking and mounting with modular terminal block convenience
- Wear-free switching up to 24 V DC/10 A and 240 V AC/800 mA
- Integrated output protection circuit
- Zero voltage switch at AC output
- Actuator version available

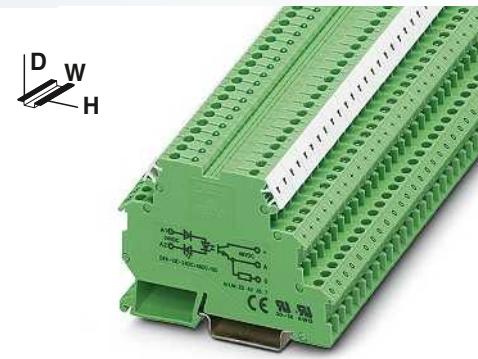

#### Notes:

Type of housing:  
Polyamide PA non-reinforced, color: green.

Marking systems and mounting material  
See Catalog 5

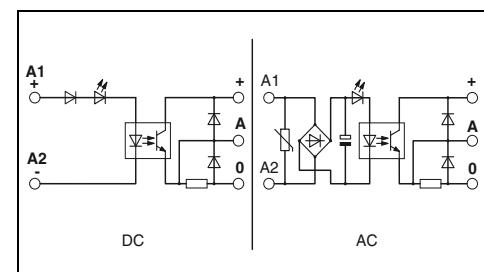

For the protection of input and output, inductive loads must be damped with an effective protection circuit.

For other EB...DIK... insertion bridges refer to page 467

with DC voltage output  
max. = 100 mA

# Relay modules

## Special relays and solid-state relays

### Switch/relay terminal block DEK-REL-24/1/S

The "Manual", "0", and "Automatic" functions are provided in a narrow 6.2 mm relay terminal block.

### Interference-free relay and solid-state relay interfaces

Coupled interference voltages on the coil lines or leakage currents can cause malfunctions in conventional modules. These special interface modules, equipped with high switching thresholds and/or effective filters, ensure good functioning.

### Relay interfaces for switching lamp loads ST-REL... and EMG 17-REL...

Lamp loads and capacitive loads produce extremely high inrush currents which weld conventional relay contacts.

To prevent this, Phoenix Contact uses an arc-resistant contact optimized for these applications, which keeps these peaks under control.

### Plug-in solid-state power relay ST-OV 3-24DC/400/3

The output of this component, dimensioned with a peak reverse voltage of 800 V, allows, for example, 230 V motors to be driven in simple reversible mode.

### Power circuit breaker solid-state relay, with signal logic

These modules combine the features of a short-circuit-proof power solid-state relay and those of a thermomagnetic protection element.

### 100 kHz input solid-state relay DEK-OE...100KHZ

Input solid-state relay for reliable transmission of high frequency signals of the type that occur with, for example, incremental encoders.

### Electronic sensor terminal block for NAMUR proximity sensors

For converting the changeable resistance of a NAMUR sensor into a digital signal that can be read by a PLC.

### Inverter module DEK-TR/INV

Module for converting NPN outputs to PNP outputs and PNP to NPN.

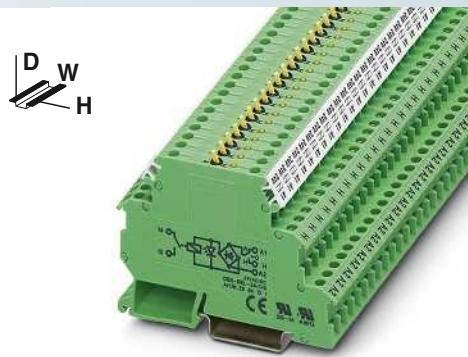

## Relay module with manual switch

Relay module with manual switch and integrated power relay for manual, zero, and automatic functions

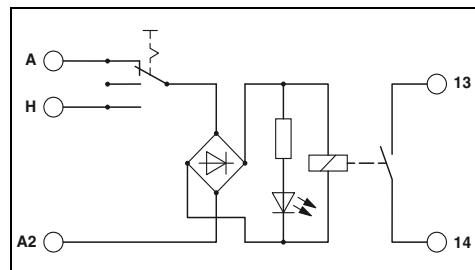

The advantages:

- Max. switching current of 5 A
- Only 6.2 mm wide
- Increased contact stability thanks to double contact
- Safe isolation according to DIN EN 50178 between coil and contact

Notes:
Type of housing: Polyamide PA non-reinforced, color: green.
Marking systems and mounting material See Catalog 5
For the protection of input and output, inductive loads must be damped with an effective protection circuit.

## Special relays and solid-state relays

### Relay modules with interference current filter

Relay and solid-state relay modules with integrated filter to protect against interference voltages or currents due, for example, to long control lines

The advantages:

- Resistant to interference currents
- High relay release voltage

Typical applications:

- Applications with long control lines
- Use of AC output boards, resulting in residual AC currents

#### Notes:

# Relay modules

## Special relays and solid-state relays

### Relay modules for high inrush currents

The Phoenix Contact relay modules of the type SO 38 have been designed for switching electrical equipment with high inrush currents.

Areas of application are:

- Inductive loads (motors, power contactors, etc.)
- Inductive/capacitive loads (fluorescent lamps, etc.)
- Ohmic loads (glow lamps, heaters)

The module is based on a relay with a special arc-resistant tungsten lead contact. This takes over the high inrush and interrupting current capacitively. The inductive main contact made of AgCdO takes over the continuous current up to 10 A reliably. With the EMG 17-REL...2E/SO38 model, this switching capacity is reached using a power relay with a set of silver tin oxide (AgSnO) contacts.

The module is available in two versions:

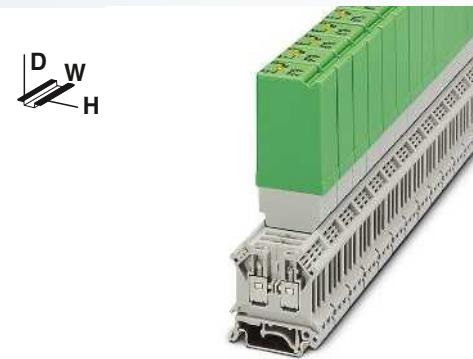

- EMG modular DIN-rail-mountable housing with an overall width of 17.5 mm
- Convenient ST-REL plug-in housing from the Phoenix ST series for mounting on URELG or UDK-RELG basic terminal blocks

Further features are:

- Snap-on mounting on common EN DIN rails
- Easy maintenance
- Clear marking of terminal blocks using Phoenix Contact marking material

## Special relays and solid-state relays

### Plug-in solid-state power relays

#### ST-OV 3

The plug-in version of the module provides all the advantages of the ST series, such as:

- Switching of up to 400 V AC/3 A
- Control of 230 V motors in straightforward reversing mode (e.g., synchronous motor in single-phase operation, see illustration)
- Plug-in

#### Notes:

## Power protection circuit solid-state relay with signal logic ST-OV 4-24DC/24DC/...-PRO

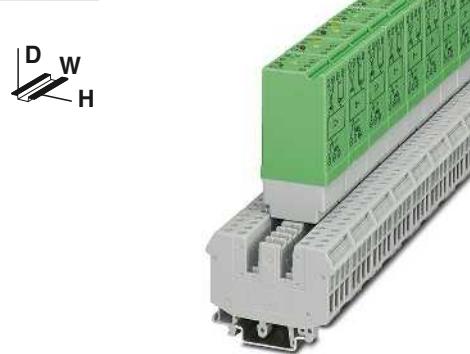

The ST-OV 4-...PRO provides protection and monitoring functions that are otherwise only known from thermomagnetic protection elements.

The PROtect modules have the following features:

- Fast disconnection with short-circuits and simultaneous current limitation
- Time-dependent overload shutdown for reliable protection against continuous overloads
- Brief inrush peaks are ignored
- After an overload or short-circuit has been triggered, a defined reset of the control voltage must be carried out
- Reliable detection and indication of a line break on the load side
- Feedback in the event of an error

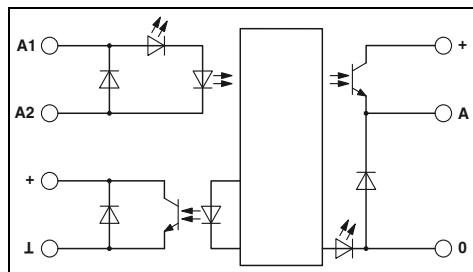

### Notes:

## Special relays and solid-state relays

### Electronic sensor terminal block for NAMUR proximity sensors

The EIK 1-SVN 24-P electronic sensor terminal block converts the changeable resistance of a NAMUR sensor unit into a digital signal that can be read by all PLCs.

- Monitoring of initiator side for short-circuit or open circuit
- Suitable resistance circuit to enable monitoring of mechanical switches (see application 2)
- LED error display
- Status display (high signal) via green LED
- 24 V/50 mA digital output
- Bridging and marking with standard terminal accessories

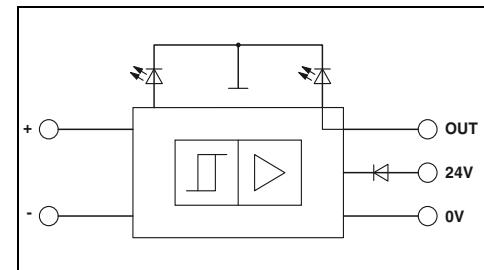

#### Notes:

Type of housing:  
Polyamide PA non-reinforced, color: green.

# Relay modules

## Special relays and solid-state relays

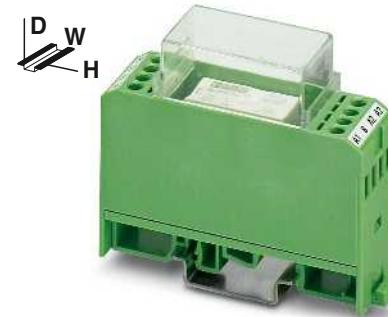

### Hybrid relay modules

With its integrated transistor level, the hybrid relay module is able to amplify weak input signals. This serves as the basis for reliable relay operation.

The advantages:

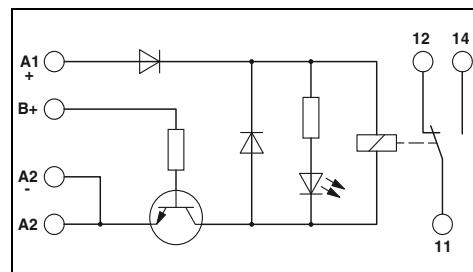

- Low control current (terminal B), type-dependent as of 0.5 mA
- Type-dependent positive or negative control current
- Integrated input and interference suppression circuit
- Safe isolation according to DIN EN 50178 between coil and contact

Notes:
Type of housing: Polycarbonate fiber reinforced PC-F, color: green.
Marking systems and mounting material See Catalog 5
For the protection of relay coils and contacts, inductive loads must be dampedened with an efficient protection circuit.

Positive switching hybrid relay

# System cabling for controllers

Wiring I/O modules with individual wires is an extremely time-consuming process. Wiring errors and tedious troubleshooting cannot be ruled out.

VARIOFACE system components reduce assembly costs by using plug-in components to carry out wiring quickly, clearly, and without errors.

In the case of **controller-specific system cabling**, front adapters, system cables, and modules are specially matched to each other. Individual solutions exist for the following controllers:

- **ABB**
- **Allen Bradley**
- **Emerson**
- **Honeywell**
- **GE Fanuc**
- **Phoenix Contact**
- **Mitsubishi Electric**
- **OMRON**
- **Schneider Electric**
- **Siemens**
- **Yokogawa**

If automation components with high-pos. connectors such as D-SUB are in the control cabinet, **universal modules** and cables are suitable for signal connection. The 1:1 connection is characteristic for these universal all-purpose modules. The modules allow orderly connection of field signals to screw, spring-cage or push-in technology.

**Universal cables** connect the control and signal level quickly and without errors.

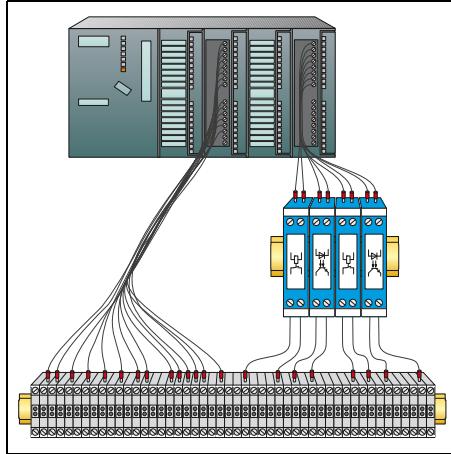

A wide variety of **potential distributors** are available for splitting the control and operating voltage. The different potential levels and the connection terminal blocks make flexible use possible.

Individual application requirements can be realized with customer-specific products (see page 488).

# System cabling for controllers

## Introduction

**Wiring with single wires**

- Time-consuming
- Confusing wiring
- Risk of mixing wires
- Time-consuming troubleshooting

**Wiring with the controller-specific system cabling:**

- Fast, fault-free wiring
- Plug and Play solution
- Orderly structure
- Considerable time savings

The matching components are selected with the help of the “system cabling for controllers” online configurator:

- Front adapter
- System cables
- Module

For the online configurator, use the web code:

**i Your web code: #0007**

Simply enter “#0007” into the search field on our website.

**Front adapter**

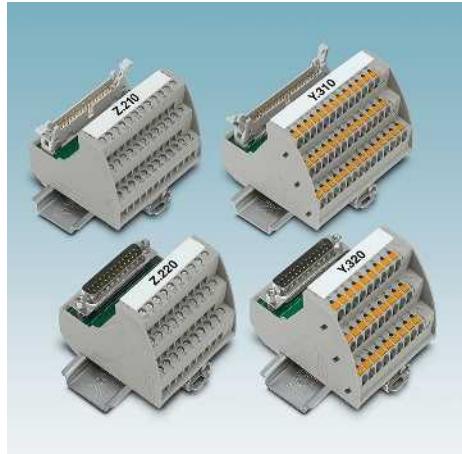

- Tailored to controller-specific I/O modules
- Plug-in components
- Connection via system cables

**8 and 32-channel modules**

- Passive modules
- Relay modules
- Controller-specific layout
- Screw or push-in connection technology

**PLC-V8 adapter**

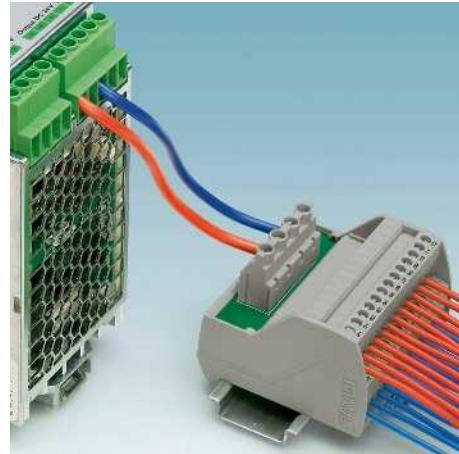

- Connection of 8 channels via the “PLC series”
- Feasible functions: relay, solid-state relay or feed-through
- Individual function selection per channel
- Screw, spring-cage or push-in connection technology

**Universal modules**

- Connector: IDC/FLK, D-SUB, ELCO or DIN
- 1:1 connection
- Screw, spring-cage or push-in connection technology
- Optional status indicator

**Universal cables**

- With IDC/FLK connector
- With D-SUB connector
- With ELCO connector
- With open end as an option

**Potential distributor**

- Up to 30 A/250 V
- Two, three or six potential levels
- Screw or push-in connection technology

### From the enquiry to the product

We develop your product from the idea to series production.

#### Concept phase

- Realization test according to your specifications
- Personal consultation
- Tendering including draft drawing

#### Realization phase

- Development according to product creation process
- Circuit diagram and PCB layout
- Component selection
- Creation of functional samples
- Creation of prototypes
- Tests in every phase of development
- EC conformance
- Preparation and implementation of approval procedures
- Environmental tests according to standards
- Documentation

#### Series phase

- Production according to IPC-A-610 Class 2
- 100% end test with automated test systems
- Lifecycle management

### Directives and standards

- Low-voltage directive
- EMC directive
- IEC 60664-1
- Insulation coordination for electrical equipment within low-voltage systems
- EN 50178
- Electronic equipment for use in power installations
- EN 61000-6
- Electromagnetic compatibility
- IPC A-600
- Acceptance criteria for PCBs
- IPC-A-610
- Acceptance criteria for electronic modules

### Components used

We use connection technology and housings from the comprehensive Phoenix Contact portfolio.

Here you will find all common market technologies:

- Screw and spring-cage connection
- Push-in spring connection
- Knife disconnection
- Modular component housing
- Building installation housings
- Profile module carriers

Furthermore, we use components, connectors, cables as well as PCBs from qualified and certified suppliers.

### Product range

We create versions from catalog production for you or new products according to your specifications from the following portfolio:

- Function modules such as diode gates
- Relay and optocoupler modules
- 1:1 installation modules (connector on terminal block)
- Potential distributors
- System cables with high-pos. connectors
- System adapters for controllers and control systems
- Transfer modules for use between controller and field level
- Output modules with electrical isolation
- Module carriers for system cabling of signal conditioners or safe coupling relays

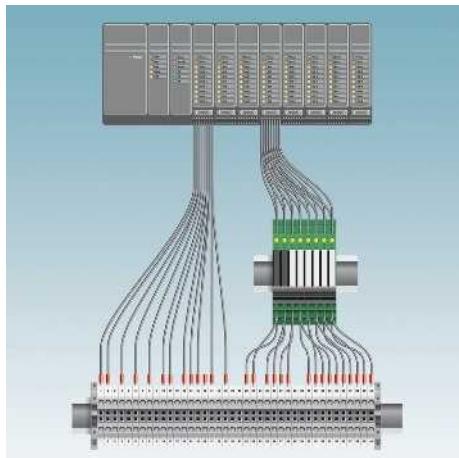

### Your direct line to us

Do you have a specific question? Talk to us about it.

### Simplification of installation

- Objectives
  - Reduce assembly costs
  - Minimize installation time
  - Optimize space in the control cabinet
  - Implementation
  - Analysis of the application
  - Draft of concept
  - Result
  - Tailor-made solution from system components (standard and customer-specific)
  - Fault-free wiring

### Retrofitting systems

- Task
  - Extension
  - Retrofitting
- Objectives
  - System availability
  - Fulfillment of statutory specifications
- Solution
  - Use adaptation solutions and high-pos. system cables
  - Result
  - Minimum downtimes

### Pre-assembled system cables

- With high-position connectors
- D-SUB strips
- IDC/FLK pin strips (2.54 mm)
- Pre-assembled at one or both ends
- Cables
  - Shielded, unshielded, halogen-free
  - 0.14 mm<sup>2</sup>/26 AWG and 0.25 mm<sup>2</sup>/24 AWG
- Quality
  - Continuity and dielectric test
  - Other versions available on request.

### Installation modules

- 1:1 marshalling terminal block to high-pos. connector (D-SUB, HE10, ELCO...)
- Passive transfer modules with system connection
- Potential distributors
- Fuse modules
- Diode modules
- Other modules on request

### Relay and optocoupler modules

- With electromechanical relays
- With solid-state relays
- Multi-channel
- With system connection
- N/O contact or PDT contact
- LED status display
- Freewheeling diode
- Protection against polarity reversal
- Redundant power supply

### Termination Carrier module carrier

- The compact Termination Carrier connects
  - Signal conditioners
  - Signal conditioners for Ex i circuits
  - Signal conditioners for SIL applications
  - Safe coupling relays easily with the automation system via system cables.
- The advantages are clear:
  - Quick startup
  - Fault minimization

# System cabling for controllers

## Controller-specific system cabling

### ABB S800 I/O

#### Termination boards with knife disconnection

The ABB S800 I/O system offers the possibility of realizing the process wiring with D-SUB connectors. ABB TU 812 Compact MTU are available for this purpose.

The FLKM-D25SUB/B/KDS3-MT/... modules are connected to the I/O modules via assembled D-SUB cables (see page 610).

In addition to screw connection with knife disconnection for every channel and ABB S800-specific marking, the modules have the following features:

- Eight negative terminal blocks with knife disconnection (TU810)
- Eight positive terminal blocks with knife disconnection (TU810/P)
- For each channel, there is a positive and negative terminal block with knife disconnection (TU830)

Passive interface modules can also be used for signal transmission (e.g., VIP-3/SC/D25SUB/F, 2315188), see page 585.

## ABB S800 I/O

### System cable

The ABB S800 I/O system offers the possibility of realizing the process wiring with D-SUB connectors. ABB TU 812 Compact MTU are available for this purpose.

The CABLE-D25SUB/B/2X14.../TU812 system cables convert digital signals from a D-SUB socket strip to two flat-ribbon cable connectors. Therefore, all 8-channel interface modules of the system cabling can be connected to S800 I/O modules. Two interface modules are used per module.

System cable

# System cabling for controllers

## Controller-specific system cabling

### Allen Bradley SLC 500

#### Front adapter

The front adapters mean that pre-assembled system cables can be directly connected to I/O modules.

- The FLKM 14-PA-SLC500... adapters connect max. 2 x 8 channels via two 14-pos. system cables. Tailor-made VARIOFACE termination boards with a variety of functions and connection options round off this system concept.
- With the FLKM50-PA-SLC500 OUT/2A front adapters, the FLKM 50/16/SLC500 termination board and 50-position system cables, the VARIOFACE system cabling can also be coupled to the OA16 and OW16 power output cards.

## Controller-specific system cabling

### Allen Bradley SLC 500

#### System cable for 32 channels

The 32-channel I/O cards of the SLC 500 are connected using 40-pos. connectors (already integrated into the I/O modules). Passive interface modules (-3/SC/FLK40, etc.) are connected to the I/O cards using the **FLK 40/EZ-DR/.../SLC** system cables.

32 channels are split into 4x8 channels using the **FLK 40/4X14/EZ-DR/...** system cables.

The following 8-channel system cabling modules can be coupled:

- OB32 and IB32  
passive and active modules plus V8 adapter
- OV32 and IV32  
passive modules without status indicator

# System cabling for controllers

## Controller-specific system cabling

### Emerson DeltaV

#### System cable

The DeltaV system allows you to install the process wiring through "mass termination blocks" (MTB) using flat-ribbon cable connectors. In addition to the 10, 16, and 20-pos. system cables of system cabling (see page 574), the following system-specific cables are available:

- **FLK 16/14/DV-OUT/...**, for digital modules with 16-pos. MTB for connection to PLC-INTERFACE
- **FLK 16/14/DV-IN/...**, for digital modules with 16-pos. MTB for connection to PLC-INTERFACE
- **FLK 20/2FLK14/EZ-DR/...**, for digital modules with 40-pos. MTB for connection to PLC-INTERFACE
- **FLK 16/24/DV-AI/EZ-DR/...**, for analog modules with 24-pos. MTB
- **FLK 50/2FLK20/EZ-DR/.../DV** system cables are specifically designed for 32-channel I/O modules with 40-pin MTB for the purpose of connecting I/O modules to 32-channel VARIOFACE interface modules

# System cabling for controllers

## Controller-specific system cabling

### Emerson DeltaV

#### Controller board for 32 channels

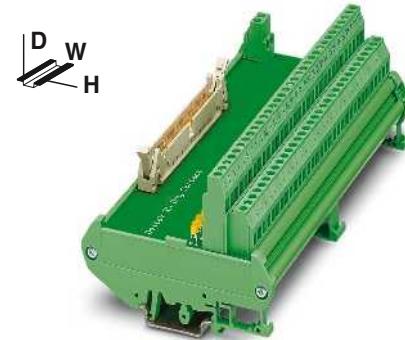

These system-specific interface modules for DeltaV modules are used in combination with the FFLK 50/2FLK20/EZ-DR/.../DV system cables. The controller board is connected to 32-channel modules through 40-pos. "mass termination blocks" with flat-ribbon cable connection.

#### FLKM 50/32M/DV

- Can be used for 32-channel input and output cards
- Two-conductor connection with a separate negative terminal per channel

#### FLKM 50/32M/IN/LA/DV

- Can be used for 32-channel input modules
- LED status display per channel
- Two-conductor connection with a separate negative terminal per channel (Dry Contact)

Interface module with two-conductor connection technology for DeltaV

- Screw terminal blocks for separate supply

**GE-FANUC, Series 90-30****Front adapter**

The front adapters mean that pre-assembled system cables can be directly connected to I/O modules.

Up to 2 x 8 channels are connected via two 14-pos. system cables.

Tailor-made VARIOFACE termination boards with a variety of functions and connection options round off this system concept.

## Phoenix Contact Axiline realtime I/O System cables

These cables have been specifically developed for connecting VARIOFACE termination boards to the Axiline realtime I/O system. The push-in technology on the I/O system ensures rapid connection.

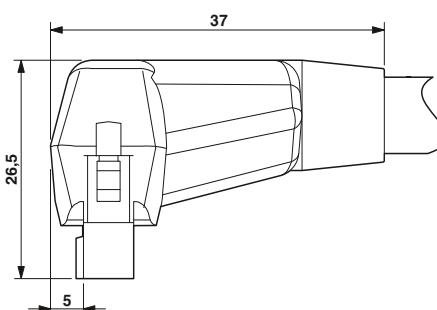

The cables have the following features:

- 1:1 connection
- 14-pos. connector, molded
- 8 pre-assembled open ends, for connection to the Axiline realtime I/O system
- Transmission of groups of 8 channels
- Marking field on connector

Tailor-made VARIOFACE termination boards round off this system concept.

### Notes:

The following modules cannot be coupled due to the larger outer contour of the molded connectors:  
UM 45-FLK14/8M/ZFKDS/PLC, 2965211  
UM 45-8RM/MR-G24/1/PLC, 2962900

## **System cabling for controllers**

## **Controller-specific system cabling**

## **Phoenix Contact Inline Front adapters**

The front adapters are used to connect pre-assembled system cables directly to Inline. Front adapters are simply plugged into the relevant Inline modules. Three connection options are available:

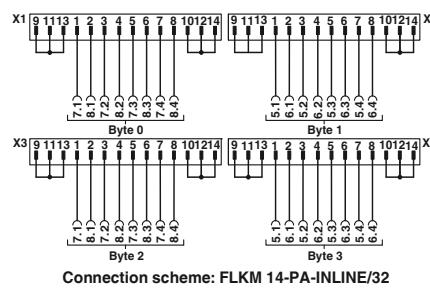

- Transfer of 8 channels via a 14-pos. system cable
  - Transmission of 2 x 8 channels over two 14-position system cables
  - Transmission of 4 x 8 channels over four 14-position system cables

Tailor-made VARIOFACE termination boards round off this system concept.

# System cabling for controllers

## Controller-specific system cabling

### VIP - power cabling

#### Universal front adapters for SIMATIC® S7-300

##### Four connection options are available:

- Connection of 40-pos. modules via four cables, each with a 10-pos. COMBI connector
- Connection of 20-pos. modules via two cables, each with a 10-pos. COMBI connector
- Connection of 40-pos. modules via 40 individual wires in rope structure (not assembled)
- Connection of 20-pos. modules via 20 individual wires in rope structure (not assembled)

...2X10COMBI...		
...4X10 PT...	35	62
...2X10 PT...		

Front adapter with punched-on connectors for 40 plug-in modular terminal blocks

##### The front adapters have the following features:

- Can be screwed on/snapped in with the I/O module
- Suitable for all common S7-300 modules, up to max. 250 V AC/DC, 6 A
- Universal 1:1 connection
- Numerically marked wires/connectors

##### Combination example:

A front adapter with punched-on 10-pos. COMBI connectors can be combined with the following modular terminal blocks for field connection:

Overall width of 52 mm per connector:

- 3045017 UT 2,5/1P
- 3210033 PT 2,5/1P
- 3040012 ST 2,5/1P
- 3040766 ST 2,5-TWIN-MT/1P

Reduced overall width of 35 mm per connector:

- 3208582 PT 1,5/S/1P
- 3212439 PTTB 1,5/S/2P

You can find further versions, accessories, and combination options in Catalog 3 "Terminal blocks" in the "Plug-in COMBI connection solutions" section or online at [phoenixcontact.net/products](http://phoenixcontact.net/products).

# System cabling for controllers

## Controller-specific system cabling

### VIP – VARIOFACE Professional front adapters for SIMATIC S7-300

#### Three connection options are available:

- Transfer of max. 32 channels via two 50-pos. system cables (32-channel cards or this type)
- Transfer of 4 x 8 channels via two 14-pos. system cables (32-channel cards or this type)
- Transfer of 2 x 8 channels via two 14-pos. system cables (16-channel cards or this type)

#### The front adapters have the following features:

- Can be screwed with I/O module
- Voltage supply via terminal blocks with spring-cage double connection
- Encapsulated socket strips for module side
- Special lengths can be configured using separate order numbers.

#### Ordering example:

A front adapter with a connected 50-pos. system cable (32-channel cards), 12.75 m in length:

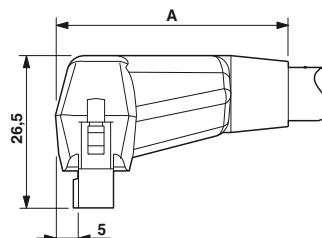

**1 pcs. 2900885/12,75**

#### Web code for the online configurator

**i Your web code: #0007**

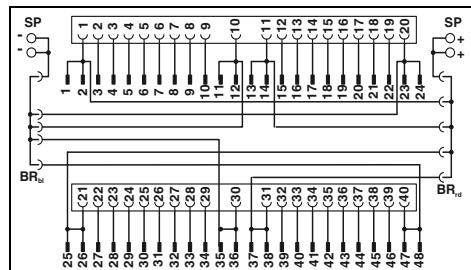

##### Notes:

The following modules cannot be coupled due to the larger outer contour of the molded connectors:  
 UM 45-FLK14/8IM/ZFKDS/PLC, 2965211  
 UM 45-FLK50/32IM/ZFKDS/PLC, 2965224  
 UM 45-8RM/MR-G24/1/PLC, 2962900  
 UM 45-16RM/MR-G24/1/PLC, 2962913

Front adapter with system cable  
1 x 32 channels can be connected

EN 61000-6-2

All bridges (BR) on the adapter must be disconnected.

**Note:**

The front adapters are non-isolated on delivery.  
Removal of the bridges can achieve electrical isolation  
(in groups of 8).

**Explanation:**

- Flat-ribbon cable strip
- Connection to I/O card

SP: Separate power terminals  
BR<sub>Bi</sub>: blue jumper  
BR<sub>rd</sub>: red jumper

# System cabling for controllers

## Controller-specific system cabling

### Siemens SIMATIC® S7-300

#### Front adapter

#### I/O modules with 32 channels or with this design

There are two connection options available:

- Transfer of max. 32 channels over one 50-position system cable
- Transmission of 4 x 8 channels over four 14-position system cables

Tailor-made VARIOFACE termination boards with a variety of functions and connection options round off this system concept.

Front adapter for SIMATIC® S7-300,  
I/O cards with max. 32 channels

#### Web code for the online configurator

**i** Your web code: #0007

#### Technical data

Max. perm. operating voltage	< 50 V AC / 60 V DC
Max. permissible current	1 A (per path) 8 A (per connection, supply via separate power supply (2.8 x 0.8 mm))
Max. perm. total current	2 A (per byte, for supply via connector) 8 A (during supply via a separate bridged power supply)
Ambient temperature (operation)	-20 °C ... 50 °C
Ambient temperature (storage/transport)	-20 °C ... 70 °C
Standards/regulations	IEC 60664 / DIN EN 50178 / IEC 62103
Connection method	IDC/FLK pin strip (2.54 mm)

## Siemens SIMATIC S7 -300

### System cables for 64-channel I/O cards

These system cables are plugged onto the 64-channel (2x32) I/O cards that are directly connected using connectors.

#### CABLE-FCN40/1X50/...

- Signal transmission of 1x32 channels
- System cable: 40-pos. connector on 50-pos. flat-ribbon cable strip

#### CABLE-FCN40/4X14/...

- Signal transmission of 4x8 channels
- Splitting cable: 40-pos. connector on four 14-pos. flat-ribbon cable strips

## Controller-specific system cabling

### Siemens SIMATIC® S7-300

#### Front adapter for MINI MCR

This front adapter is used exclusively to couple the MINI MCR-SL-V8-FLK 16 A adapter. Changed standard analog signals can be transmitted with the help of these components.

Suitable isolators can be found from page 92.

For suitable 16-pos. system cable (FLK 16/EZ-DR/...), refer to page 606.

FLKM 16-PA-S300/MINI-MCR connection scheme

#### Explanation:

- Flat-ribbon cable strip
- Connection to I/O card
- Screw terminal blocks for separate supply

**Siemens SIMATIC® S7-300****Front adapter for****MINI Analog system cabling**

The FLKM 16-PA-331-1KF/I/MINI-MCR front adapter helps in system cabling in conjunction with the MINI Analog system adapter and a 16-pos. system cable FLK 16/EZ-DR/.../KONFEK, refer to page 606.

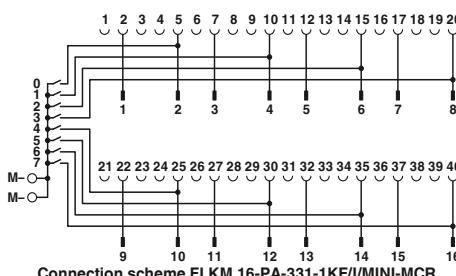

Instead of the conventional front connector, screw terminal blocks are used to snap this component onto the analog module.

The DIP switches can be used to connect "M-" connections to each other and to the central ground of the system.

The front adapter supports **only current signals**.

The front adapter is suitable for the following analog input card:

- 6ES7 331-1KF02-0AB0

**Front adapter for SIMATIC® S7-300, 6ES7 331-1KF02-0AB0 analog I/O card**

# System cabling for controllers

## Controller-specific system cabling

### Siemens SIMATIC® S7-1500

#### System cables for front connectors from the “TOP connect” series

These system cables are connected directly to Siemens “SIMATIC TOP connect” front connectors. A VARIOFACE front adapter is not required. The cables can be used to connect existing 8-channel Phoenix Contact interface modules.

- For passive signal transmission, e.g., VIP-2/SC/FLK14/PLC; Order No. 2315214, see page 542.
- For relay or solid-state relay connection via V8 adapters, e.g., PLC-V8/FLK14/OUT; Order No. 2295554, see page 451.

The system cables are available in the following versions:

- Unshielded
- Shielded
- Halogen-free

The following SIMATIC® S7-1500 cards can be coupled:

#### Digital input:

- 6ES7 521-1BH00-0AB0
- 6ES7 521-1BH50-0AA0
- 6ES7 521-1BL00-0AB0

#### Digital output:

- 6ES7 522-1BH00-0AB0
- 6ES7 522-1BL00-0AB0

## Web code for the online configurator

**i Your web code: #0007**

#### Notes:

These system cables are connected directly to the Siemens S7-1500 6ES7 921-5AB20-0AA0 or 6ES7 921-5AH20-0AA0 front connector modules.

The Siemens adapters are not supplied by Phoenix Contact.

EAC

## Technical data

Max. perm. operating voltage	< 50 V AC / 60 V DC
Max. perm. current carrying capacity per path	1 A

## Controller-specific system cabling

### Siemens SIMATIC® S7-400

#### Front adapter

The front adapters mean that pre-assembled system cables can be directly connected to I/O modules.

#### FLKM 50-PA-S400

- Transmission of max. 32 digital channels over one 50-position system cable.

#### FLKM 50/4-FLK14/PA-S400

- Transmission of max. 32 digital channels via one 14-position system cable.

Tailor-made VARIOFACE termination boards with a variety of functions and connection options round off this system concept.

#### FLKM 50-PA-S400 (3-48)

- Analog channels are connected via a 50-position system cable.

The 1:1 connection of the adapter means that corresponding 1:1 interface modules are connected here

**Siemens SIMATIC® S7-400****Adapter for conversion from S5-135/155 to S7-400**

The FLKM S135/... adapters connect a SIMATIC® S5 plug wired with individual conductors directly with the SIMATIC® S7-400 basic card.

The SIMATIC® S5 plug is plugged directly onto an S7-400-I/O card with the help of an FFLKM S135/... intermediate adapter.

A new SIMATIC® S7-400 is installed in place of the SIMATIC® S5. The existing field wiring remains intact.

**Attention:**

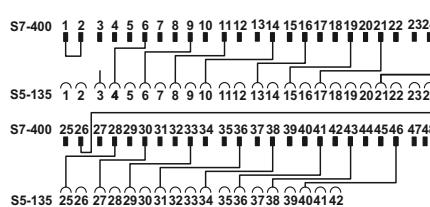

The LEDs of the S7-400 module are hidden.

## Siemens SIMATIC® S7-300 Adapter for conversion from S5-135/155 to S7-300

S5-S7 adapters connect the S5-135 front adapters wired with individual wires to the I/O modules of the S7.

With the help of the FLKM S135/S7/FLK50 converter module, the signals of the S5-135 front adapter can be converted to a 50-pos. strip. A 50-pos. system cable FLK 50/EZ-DR.../KONFEK and a front adapter for the SIMATIC® S7 (FLKM 50-PA-S300) now connect the signals with the I/O module.

### Notes:

Due to the geometry, it is not possible to couple any molded FLK connectors (e.g., VIP-PA...S7).

Converter for Siemens SIMATIC® S5-135 to 50-pos. FLK strip.

### Technical data

Max. perm. operating voltage	60 V DC
Max. permissible current	1 A (per path)
Ambient temperature (operation)	-20 °C ... 50 °C
Ambient temperature (storage/transport)	-20 °C ... 70 °C
Mounting position	any

## Startup adapters for extending the existing S5-135/155 field wiring

All signals of the existing S5-135 wiring are extended by 3 or 5 meters with the help of the universal startup adapters. The open cable end can be connected to various controllers such as S7-400 or S7-300. Thus, the existing field wiring of S5-135 can communicate with the new controller for test purposes. Since the new control unit is temporarily arranged before the control cabinet, the original status of the system can be restored if required.

If the system functions with the new controller without problems, the S5-135 can now be replaced.

### Technical data

Max. perm. operating voltage	250 V AC/DC
Max. permissible current	6 A (per path)
Ambient temperature (operation)	-20 °C ... 50 °C
Ambient temperature (storage/transport)	-20 °C ... 80 °C

**YOKOGAWA Centum VP****System cables for MINI Analog system cabling**

The Yokogawa system cable **CABLE-40/2FLK16/.../YUC** makes it possible to connect 16 MINI Analog modules to a Yokogawa control system. In conjunction with two MINI Analog system adapters MINI MCR-SL-V8-FLK-16-A, the Yokogawa system cable provides a simple and cost-effective Plug and Play solution.

The system cable is plugged directly into Yokogawa module. Two 16-pos. flat-ribbon cable connectors are provided for connecting the module to the MINI Analog system adapters.

The system cable in conjunction with **4-wire measuring transducers** is suitable for the following analog cards:

- AAI 141
- AAI 143

Shielded

## System cabling for controllers

### Controller-specific system cabling

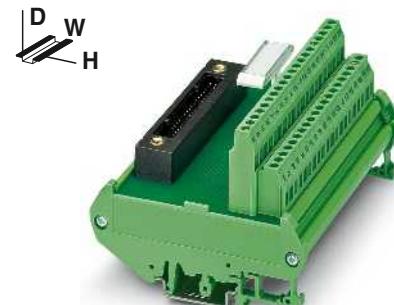

#### YOKOGAWA Centum VP

##### Interface modules

These modules are connected to the I/O modules via the YUC system cable (on page 534).

##### FLKM-KS40/YCS:

- For analog modules
  - Universal interface module with 40 connection terminal blocks
- For more cabling solutions for Yokogawa visit: phoenixcontact.com

Passive interface modules

#### Technical data

Max. perm. operating voltage	< 25 V AC / 30 V DC	
Max. perm. current (per branch)	1 A	
Ambient temperature (operation)	-20 °C ... 50 °C	
Mounting position	any	
Standards/regulations	DIN EN 50178, IEC 60664, IEC 62103	
Connection method	Screw connection	
Field level	Yokogawa KS-compatible	
Controller level	0.2 ... 4 mm <sup>2</sup> / 0.2 ... 2.5 mm <sup>2</sup> / 24 - 12	
Connection data solid / stranded / AWG	90 mm / 68 mm	
Dimensions	H / D	

#### Ordering data

Description	No. of pos.	Module width W	Type	Order No.	Pcs. / Pkt.
Controller board, for analog I/O modules	40	112 mm	FLKM-KS40/YCS	2314642	1

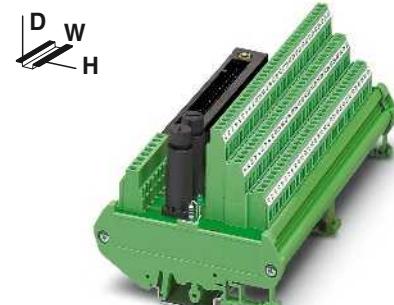

#### YOKOGAWA Centum VP

##### Interface modules

These modules are connected to the I/O modules via the YUC system cable (on page 534).

##### FLKMS-KS50/32IM/YCS:

- For digital modules ADV 151 and ADV 551
  - Three-conductor connection (signal, plus, minus)
  - Redundant voltage supply (fuse IEC 127-2, 5 x 20, 2 A)
- For more cabling solutions for Yokogawa visit: phoenixcontact.com

## YOKOGAWA Centum VP

### Interface modules

These modules are connected to the analog I/O modules via the 40-pos. YUC system cable (on page 534).

The modules are designed for redundant signal transmission (two connectors parallel). A separate connection to the HART multiplexer is possible.

#### FLKM-KS40/AO16/YCS

- For analog module AAI 543

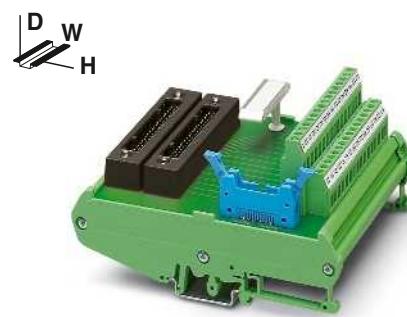

#### FLKMS-KS40/SI/AI16/YCS

- For analog modules AAI 141 and AAI 143 (operation of modules in 4-wire mode)
- Transfer of 16 channels with separate positive and negative connections
- 16 plug-in fuses (IEC 127-2, 5 x 20, 0.1 A) per positive supply and LED status indicator
- Redundant voltage supply (fuse IEC 127-2, 5 x 20, 2 A)

#### FLKMS-KS40/AI/YCS

- For analog modules AAI 141 and AAI 143 (operation of modules in 4-wire mode)
- Transfer of 16 channels with separate positive and negative connections
- Redundant voltage supply (fuse IEC 127-2, 5 x 20, 2 A)

## Controller-specific system cabling

### Yokogawa ProSafe-RS Interface modules

new

These modules are connected to the I/O module via the 50-pos. YUC system cable (on page 534).

- For SDV144 digital module
- Redundant signal transmission (two parallel connectors)
- 16 channels

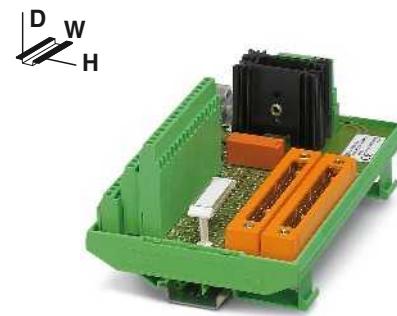

### UM-2KS50/16DI/RS/MKDS

- Screw connection
- Redundant voltage supply with signaling relay and fuse (IEC 127-2, 5 x 20, 3,15 AT)
- LED status display per channel

### UM-2KS50/DI16/RS/K-MT/SO241

- Screw connection with knife disconnection
- Redundant voltage supply with signaling relay and fuse (TR5, 2 AT)
- Plug-in fuses (TR5, 0,1 AT) and LED status indicator per channel

Max. perm. operating voltage	24 V DC ± 5 %
Max. perm. current (per branch)	100 mA
Ambient temperature (operation)	-20 °C ... 70 °C
Mounting position	any
Standards/regulations	DIN EN 50178
Connection method	Screw connection
Field level	Yokogawa KS-compatible
Controller level	0.2 ... 2.5 mm <sup>2</sup> / 0.2 ... 1.5 mm <sup>2</sup> / 24 - 14
Connection data solid / stranded / AWG	112 mm / 80 mm
Dimensions	H / D

Passive interface modules

# System cabling for controllers

## Controller-specific system cabling

### Termination Carriers for Yokogawa Centum VP and ProSafe-RS

The Termination Carriers are a compact solution for connecting signal conditioners and coupling relays to the Yokogawa Centum VP systems and ProSafe-RS.

- Mechanically decoupled PCB
- Redundant system connection
- Simple or redundant supply (diode decoupling, polarity reversal protection) and monitoring function. Implementation via separate DIN rail module or integrated switching on the PCB

new

Termination Carrier for Centum VP system, can be used with signal conditioners of the MINI Analog series

### Termination Carrier for MINI Analog signal conditioners

#### TC-2KS40-AI16-M-PRH-CS

- For AAI141/AAI143 analog I/O modules

#### TC-2KS40-AO16-M-PRH-CS

- For AAI543 analog I/O module

### Termination Carrier for Ex i signal conditioners of the MACX Analog Ex series

#### TC-2KS50-DI32-2EX-PR-CS

- For ADV151/ADV161 digital I/O modules

#### TC-2KS50-DO32-EX-PR-CS

- For ADV551/ADV digital I/O modules

#### TC-2KS40-AO16-EX-PR-CS

- For AAI543 analog I/O module

#### TC-2KS40-AI16-EX-PR-CS

- For AAI141/AAI143 analog I/O modules

#### TC-2KS50-DO16-EX-PR-RS

- For SDV541 digital I/O module

#### TC-2KS50-DI16-EX-PR-RS

- For SDV144 digital I/O modules

#### TC-2KS40-AI16-EX-PR-RS

- For SAI143 analog I/O module

#### TC-2KS40-AO8-EX-PR-RS

- For SAI533 analog I/O module

### Termination Carrier for coupling relays from the PSR-ETP or PSR-FSP series

#### TC-2KS50-DO16-F&G-AR-RS

- For SDV541 digital I/O modules

#### TC-2KS50-DO16-ESD-AR-RS

- For SDV541 digital I/O modules

# System cabling for controllers

## Controller-specific system cabling

### VIP termination boards for 8 channels

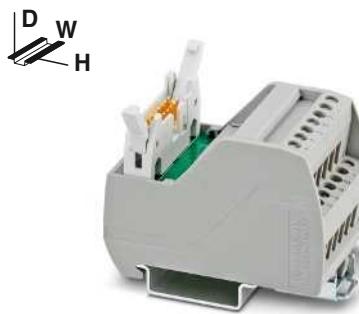

These VIP - VARIOFACE Professional modules are used in combination with 14-pos. system cables and the relevant front adapters.

#### Features:

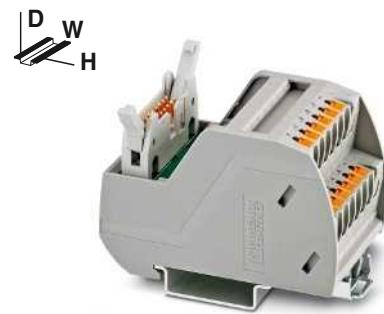

- Byte-by-byte marking
- For digital I/O modules
- With LED as an option

#### Notes:

For marking systems (e.g., "ZB 22:UNBEDRUCKT"; Order No. 0811862) and mounting material, see Catalog 5.

## Controller-specific system cabling

### VIP termination boards for SIMATIC® S7

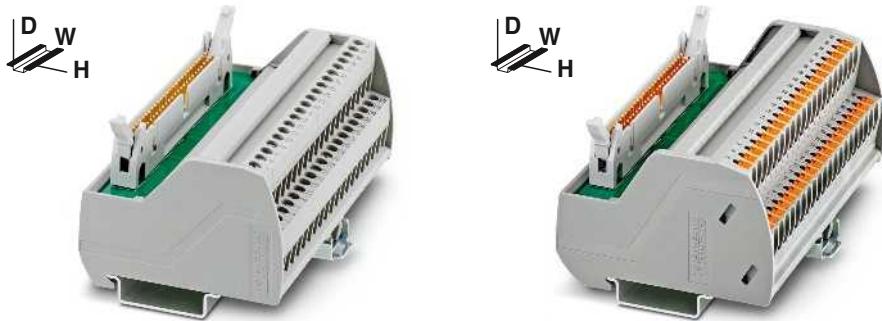

These VIP - VARIOFACE Professional modules are used in combination with 50-pos. system cables and the relevant front adapters for SIMATIC® S7.

#### Features:

- Numerical marking
- Specifically for S7-300 or S7-400

#### Notes:

For marking systems (e.g., "ZB 22:UNBEDRUCKT"; Order No. 0811862) and mounting material, see Catalog 5.

**Passive interface modules for input/output, with SIMATIC®-specific marking and screw connection**

**Passive interface modules for input/output, with SIMATIC®-specific marking and push-in connection**

## Simulation module with switches

These VARIOFACE modules enable simple simulation of the control and peripheral hardware for 8 signals.

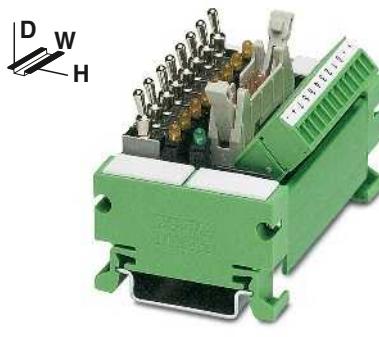

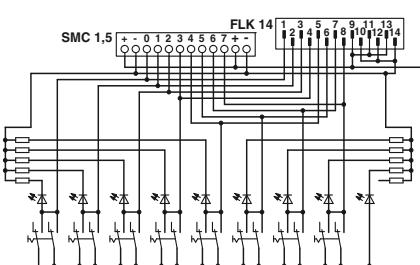

The UM 45-DI/DO/S/LA/SIM8 switch module is assembled for signal transmission with COMBICON screw connector for single-conductor wiring. Alternatively, connection to the PLC system cabling is established through a 14-pos. flat-ribbon cable pin strip. Connection to the front adapters of the PLC system cabling is established through 14-pos. system cables with socket strips.

Each signal path is allocated an LED which signals the "high active" signal state. The supply voltage to the modules is signaled via a green LED.

### Notes:

Type of housing:  
Terminal blocks: Polyamide PA non-reinforced, color: green.  
Housing: PVC

# System cabling for controllers

## Controller-specific system cabling

### COMPACT LINE output modules with relays, one N/O contact

These VARIOFACE Compact Line output modules are used in combination with the respective front adapters.

Like the front adapters, the modules are connected via 14-pos. or 50-pos. system cables. The following features characterize these relay modules:

- Plug-in miniature relays, each with an N/O contact
- Universal applications from 1 mA to 3 A continuous current through 2-layer double contact with hard gold plating
- Low construction height of only 45 mm
- LED status display for each signal path and supply voltage
- Freewheeling and reverse polarity protection diode for each signal path

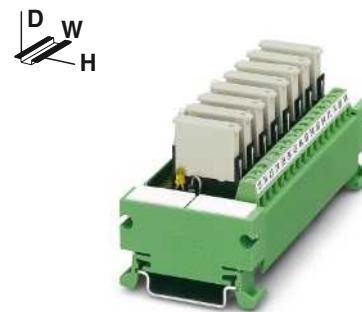

With the 32-channel version, the system cable is connected to the 16-channel base module UM 45-16RM/MR-G24/1/PLC.

The output extension module UM 45-16RM/MR-G24/1/E/PLC with a further 16 channels is coupled to the base module via a 20-position flat-ribbon cable (length: 10 cm).

#### Notes:

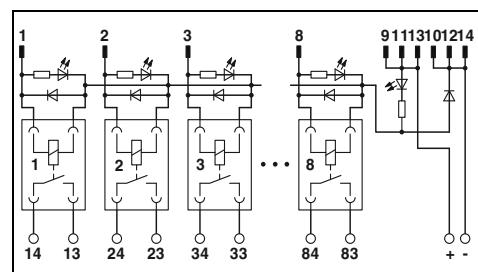

The connecting cable between the base and the extension modules is delivered with the extension unit.

Due to the geometry, it is not possible to couple any molded FLK connectors (e.g., VIP-PA...S7).

# System cabling for controllers

## Controller-specific system cabling

### Output module for relays

- **2 PDTs**
- **1 PDT with disconnect terminal blocks**

These VARIOFACE output modules are used in combination with the respective front adapters.

8 channels are controlled via 14-pos. cables. All modules feature the following:

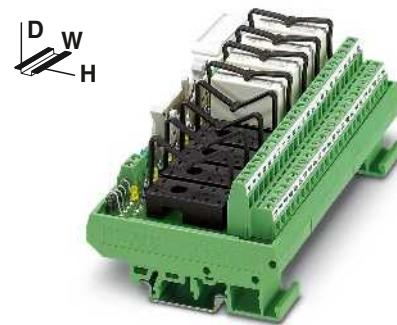

- Plug-in miniature relays
- LED status indicator and freewheeling diode per signal path
- Supply voltage indicator (LED)
- Polarity protection diode

With the 32-channel version (1 PDT with knife disconnect terminal blocks), the 50-pos. system cable is connected to the base module with 16 channels.

The output extension module with a further 16 channels is coupled to the base module via a 20-pos. flat-ribbon cable (length: 10 cm).

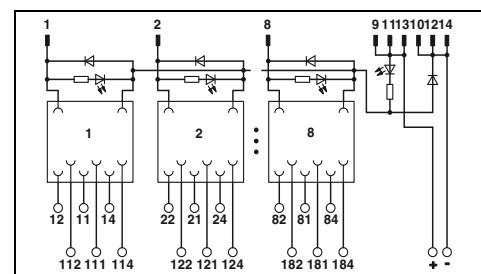

#### Notes:

The connecting cable between the base and the extension modules is delivered with the extension unit.

## Controller-specific system cabling

### Output modules with relays, 1 PDT with detectable manual operation

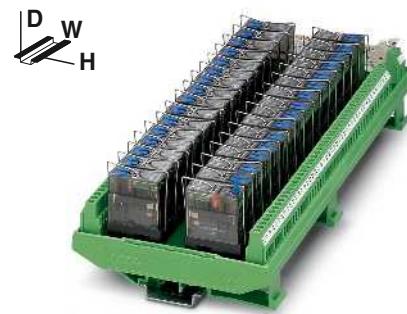

These VARIOFACE output modules are used in combination with the respective front adapters.

The modules are connected via 14 or 50-pos. system cable. These relay modules offer the following features:

- Plug-in miniature relays each with a PDT contact and detectable manual operation
- Narrow overall width of just 92 mm (8 channels) or 285 mm (32 channels)
- LED status indicator and freewheeling diode per signal path (integrated in relay)
- Supply voltage indicator (LED)

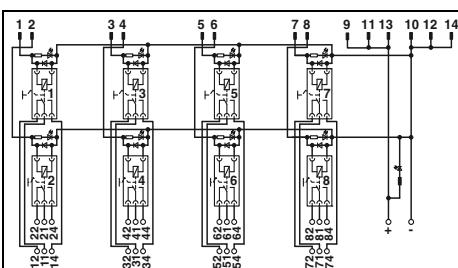

Output module with 8 miniature relays,

## Output modules with relays, 1 PDT with or without manual operation and fuses

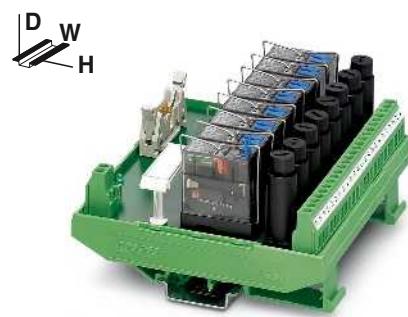

These VARIOFACE output modules are used in combination with the respective front adapters.

The modules are connected via 14-pos. system cable. These relay modules offer the following features:

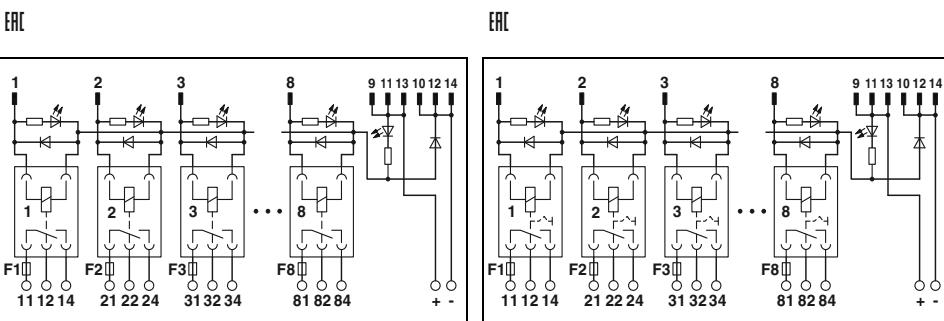

- Plug-in miniature relays each with a PDT contact with or without manual operation
- Fuse per output circuit as short-circuit protection
- Narrow overall width of just 127 mm
- LED status indicator and freewheeling diode per signal path
- Supply voltage indicator (LED)
- Polarity protection diode

Output module with 8 miniature relays,  
1 PDT and fuse per output circuit

Output module with 8 miniature relays,  
1 PDT with detectable manual operation  
and fuse per output circuit

## Controller-specific system cabling

### VIP output module

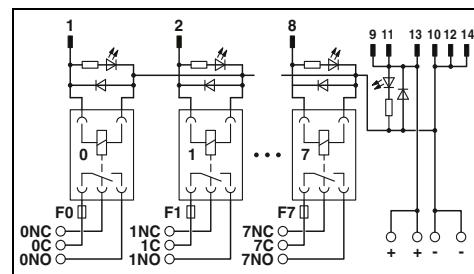

This VIP VARIOFACE output module is used in combination with the respective front adapters. Like the front adapters, the module is connected via 14-pos. system cables.

#### Features:

- Plug-in miniature relays, each with a PDT contact
- LED status display for each signal path and supply voltage
- Freewheeling diode for each signal path
- Push-in connection

Output module with 8 miniature relays,  
1 PDT and fuse per output circuit

### Adapters for PLC RELAY (6.2 mm)

#### Notes:

For cross-reference list with matching PLC-INTERFACE modules,  
see page 572

**PLC-V8/...** are the VARIOFACE adapters connecting the eight slim 6.2 mm PLC-INTERFACE modules to the VARIOFACE system cabling:

- Can be plugged into the bridge shafts of eight aligned PLC RELAY modules
- Freely definable configuration with relays, optocouplers, and passive feed-through terminal blocks
- With D-SUB connection as an option for universal connections

**VARIOFACE adapter  
for 6.2 mm PLC RELAY**

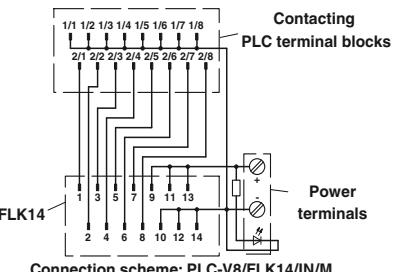

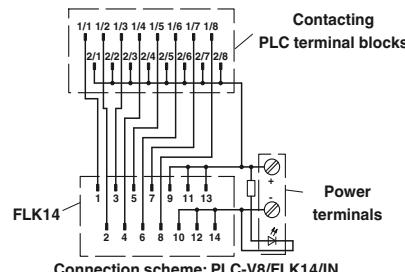

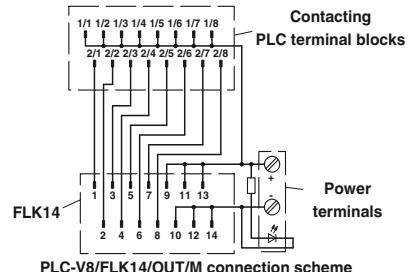

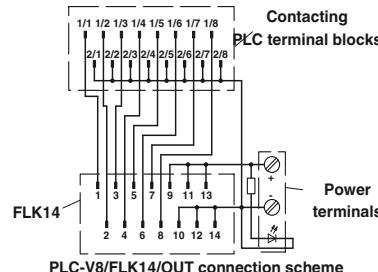

#### Technical data

# System cabling for controllers

## Controller-specific system cabling

### Feed-through terminal blocks for PLC RELAY

The VARIOFACE PLC-VT terminals are passive feed-through terminal blocks, with the same shape as the 6.2 mm slim relays and PLC RELAY optocoupler interfaces. It is thus possible to implement 8-channel interface blocks for the system cabling, which can be adapted to the specific application with bit accuracy. For individual requirements, the relay, optocoupler or the PLC-VT terminal blocks for passive signal transmission can be combined as needed.

#### PLC-VT

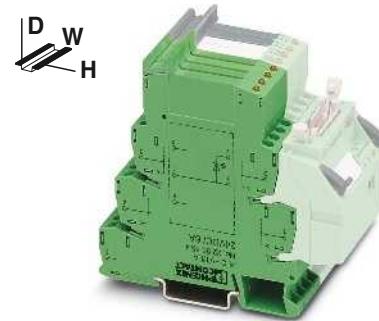

#### PLC-VT/LA

- Can be combined with PLC RELAY universal series
- Signal path with additional potential level for free assignment (two-conductor connection)
- With LED as an option

#### PLC-VT/ACT

#### PLC-VT/ACT/LA

- Can be combined with PLC RELAY actuator series
  - Signal path with two additional potential levels for free assignment (three-conductor connection)
  - With LED as an option
- The system connection is made via the PLC-V8 adapter.

VARIOFACE feed-through terminal blocks for PLC-INTERFACE universal series

## Adapter for RIFLINE complete RF-1

new

RIF-1-V8/... are the VARIOFACE adapters that connect the eight RIF-1 relay modules with the system cabling:

- Can be plugged into eight RIF-1 relay modules in series
- The adapter has one LED indicator and one freewheeling diode per relay

The following RIF-1 relay modules can be connected with the adapter:

- RIF-1-BPT/2X21,  
Order No. 2900931
- RIF-1-RPT-LDP-24DC/1X21,  
Order No. 2903342
- RIF-1-RPT-LDP-24DC/1X21 AU,  
Order No. AU 2903338
- RIF-1-RPT-LDP-24DC/2X21,  
Order No. 2903334
- RIF-1-RPT-LDP-24DC/2X21 AU,  
Order No. 2903330

If fully assembled RIF-1 relay modules are used, the indicator/interference suppression modules must be removed before installation.

**PLC universal series**

The universal series of products can be used as either input or output interfaces. Each product consists of a basic terminal block with a plug-in miniature relay (PDT) or a plug-in solid-state relay.

**PLC actuator series**

When used as an interface between the PLC and actuators, such as motors, contactors or solenoid valves, only one N/O contact function is normally required. In such cases, the PLC...ACT output interface is used. All actuator connections, including the load return line, are connected directly. This eliminates the need for additional output terminal blocks.

**PLC sensor series**

When used as an interface between the PLC and sensors, such as proximity switches, limit switches or auxiliary contacts, only one N/O contact function is normally required. In such cases, the PLC...SEN input interface is used. All sensor connections, including the supply voltage for the sensors/switches, are connected directly. This eliminates the need for additional terminal blocks.

# System cabling for controllers

## Controller-specific system cabling

### System cable with flat-ribbon cable connector

- 1:1 connection
- 14 and 50-pos.
- Connectors as per IEC 60603-13
- Unshielded
- Shielded
- Halogen-free see page 605
- Special lengths see page 609

Unshielded

Shield connection at one end

EAC

Applied for: cUL / UL

## Universal modules

### VIP – VARIOFACE Professional modules with flat-ribbon cable connectors

- 1:1 connection
- 10 to 64-pos.
- Screw connection
- Metal foot
- As per IEC 60603-13
- With status indicator as an option
- Low and high engagement latches are supplied with all modules.

#### Notes:

For marking systems (e.g., "ZB 22:UNBEDRUCKT"; Order No. 0811862) and mounting material, see Catalog 5.

**10 to 20 positions  
with screw connection**

## Universal modules

### VIP – VARIOFACE Professional modules with flat-ribbon cable connectors

- 1:1 connection
- 10 to 64-pos.
- Push-in connection
- Metal foot
- As per IEC 60603-13
- With status indicator as an option
- Low and high engagement latches are supplied with all modules.

#### Notes:

For marking systems (e.g., "ZB 22:UNBEDRUCKT"; Order No. 0811862) and mounting material, see Catalog 5.

**10 to 20 positions  
with push-in connection**

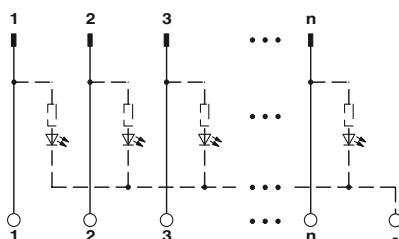

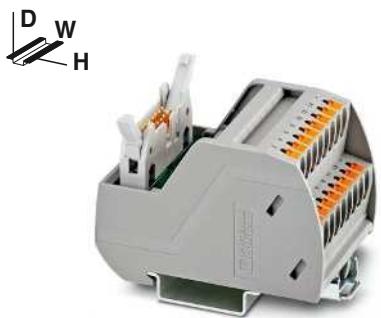

#### Technical data

Operating voltage	60 V AC/DC
Max. perm. current (per branch)	1 A

## Universal modules

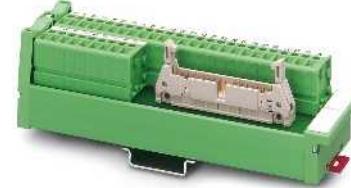

### SLIM-LINE modules for flat-ribbon cable connectors

**VARIOFACE SLIM-LINE modules**  
connect flat-ribbon cable connectors in accordance with IEC 60603-13/DIN 41651 to front connection terminal blocks.

The modules are provided with low and high engagement catches to protect the flat-ribbon cable connector against being accidentally released.

20 and 26-pos.  
With screw connection

34 to 50 positions  
With screw connection

Operating voltage	EAC	
Max. perm. current (per branch)		
Ambient temperature (operation)	< 50 V AC / 60 V DC	
Mounting position	0.8 A (data valid for 100% simultaneity factor)	
Standards/regulations	any	
Screw connection solid / stranded / AWG	DIN EN 50178, IEC 60664, IEC 62103	
Dimensions	0.2 ... 4 mm <sup>2</sup> / 0.2 ... 2.5 mm <sup>2</sup> / 24 - 12

## Universal modules

### Feed-through modules for IDC/FLK connectors (pitch 2.54 mm) with screw connection

VARIOFACE DFLK... feed-through modules connect the flat-ribbon cable connectors in accordance with IEC 60603-13/DIN 41651 to the screw connection terminal blocks.

These modules are suitable for mounting on a side panel with an appropriate housing cutout (see dimensioning table).

The modules are provided with low and high engagement catches to protect the flat-ribbon cable connector against being accidentally released.

**16 to 50 positions  
with screw connection**

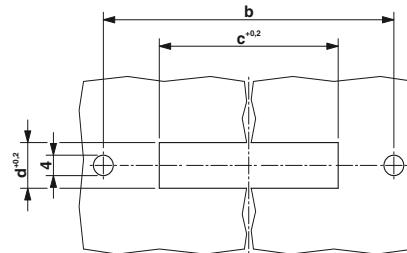

#### Technical data

Operating voltage	< 50 V AC / 60 V DC
Max. perm. current (per branch)	1 A

## Universal modules

### SLIM-LINE modules for D-SUB connectors

These VARIOFACE modules connect D-SUB strips with front connection terminal blocks in accordance with IEC 60807-2/DIN 41652.

To make the ground connection, the metallic plug shell (4-40 UNC thread) makes contact with a connection terminal block.

**9 to 25 positions**  
With screw connection

**37 to 50 positions**  
With screw connection

Operating voltage	125 V AC/DC
Max. perm. current (per branch)	2.5 A
Ambient temperature (operation)	-10 °C ... 50 °C
Mounting position	any
Standards/regulations	DIN EN 50178, IEC 60664, IEC 62103
Dimensions	D / W 45 mm / 25 mm

## Universal modules

### Modules for ELCO connectors

#### Notes:

Dimensional drawings and pin assignments, see page 620

These modules can be used to connect ELCO connectors of the 8016 series to screw connection terminal blocks.

The diagonal position of the ELCO connector means that the wires leading out of the cable housing at the side can be led away without restricting neighboring modules.

38-pos.

## Universal modules

### Modules for ELCO connectors for use in Ex i circuits

The VARIOFACE modules connect ELCO connectors of the 8016 series to screw connection terminal blocks. The modules for ELCO connectors can be used as simple electrical equipment for applications in intrinsically safe circuits as per EN 60079-14. They fulfill the requirements of intrinsic safety as per EN 60079-11 (EN 50020) and can be used for various intrinsically safe circuits taking into account the pin configuration.

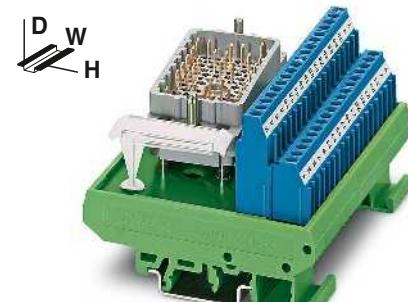

The voltage of an intrinsically safe circuit may not exceed 30 V. The voltage difference between two intrinsically safe circuits can be up to 60 V.

For clear identification for intrinsically safe circuits, the modules are fitted with blue screw connection terminal blocks.

The arrangement of angled ELCO connectors makes it possible to lead the lines led out from the cable housing away from the adjacent modules without any negative effects.

To separate intrinsically safe and non-intrinsically safe circuits, a distance of at least 50 mm should be kept between the connection points using partition plates or spaces.

Notes:
Dimensional drawings and pin assignments, see page 621
Facts about explosion protection, see page 144

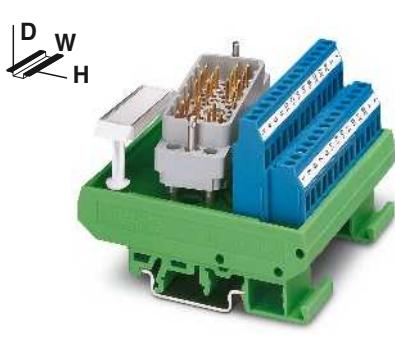

32-pos.

### Technical data

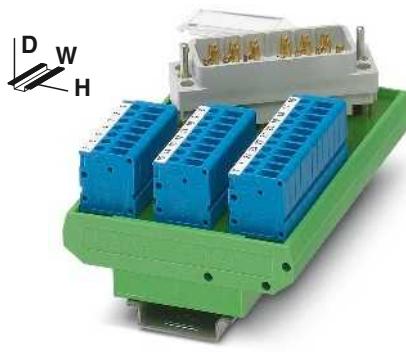

Operating voltage	max. 30 V DC (max. voltage between two intrinsically safe circuits: 60 V DC)

## Modules with COMBICON connection

- The slim 10 and 18-pos. VARIOFACE SLIM-LINE modules connect the front connection terminal blocks to a COMBICON header. The corresponding COMBICON connectors (5.0 mm pitch) can be found in the COMBICON catalog, PCB connection technology.
- The 32-pos. module UMK-32 MDSTB/MKKDS 3/R connects screw connection terminal blocks with coded COMBICON plug-in screw connectors.

## Universal cables

### VIP – VARIOFACE Professional system cables with flat-ribbon connectors

- 1:1 connection
- 10 to 20-pos.
- Connectors as per IEC 60603-13
- In the desired lengths
- Individual serial number

#### Note:

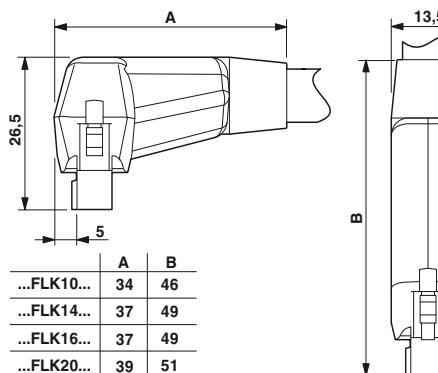

Due to the enlarged outer contour of the molded connectors, module types with UM45 profile and three-level terminal blocks cannot be connected with the VIP-CAB-FLK... system cable.

The following module types (10 to 50-pos.) can be connected.

For example, for 20 positions:

- VIP-2/SC/FLK 20
- VIP-2/SC/FLK20/LED
- FLKM 20/ZFKDS
- UM45-FLK 20/ZFKDS (double-level connection)

The VIP-CAB-FLK... system cables are not suitable for front adapters (see the dimensional drawing).

Unshielded

# System cabling for controllers

## Universal cables

### System cable with flat-ribbon cable connector

#### Standard lengths

Pre-assembled round cables are used to connect the PLC front adapters to the corresponding VARIOFACE controller boards.

The following versions are available with 14 and 50 positions:

- Unshielded
- Shielded
- Halogen-free

Connector strips are fitted on both ends of the cables in accordance with IEC 60603-13/DIN 41651 (1:1 connection).

In case of shielded cables, a cable end with a ferrule is additionally provided as a shield connection (length: approx. 0.5 m; cable H05V-K 1 mm<sup>2</sup>, black).

Special lengths are defined using an order key, refer to page 608.

Unshielded

#### Technical data

Max. perm. operating voltage	< 50 V AC / 60 V DC
Max. perm. current carrying capacity per path	1 A
Max. conductor resistance	0.16 Ω/m

# System cabling for controllers

## Universal cables

### System cable with flat-ribbon cable connector

#### Special lengths

Pre-assembled **round cables** for connecting, e.g., PLC front adapters to the corresponding VARIOFACE termination boards. The cables are assembled with connector strips at both ends according to IEC 60603-13/DIN 41651. For shielded cables, a cable end with ferrule is available additionally as a shielded connection (length: approx. 0.5 m; cable: H05V-K 1 mm<sup>2</sup>, black).

The order key for special lengths is described using three features.

The order of the features is as follows:

- Cable type
- Assembly
- Length in meters

There are two order keys, one for unshielded round cables, FLK EZ-DR/.../..., and one for shielded round cables, FLK EZ-DR-S/.../.... To ensure clear specification when ordering, the features are described in detail below:

#### Cable type

- This specifies the number of individual conductors of the specific cable.

#### Assembly

- None,  
the cable is not assembled at either end;
- 10-pos. socket strip at both ends, the cable is assembled with 10-pos. connectors at both ends  
(1:1 connection);

- 14-pos. socket strip at both ends, the cable is assembled with 14-pos. connectors at both ends  
(1:1 connection);
- 14-pos. socket strip at one end, 16-pos. socket strip at one end, the cable is assembled with a 14-pos. connector at one end and a 16-pos. connector at the other end (for SIMATIC S7; no 1:1 connection).

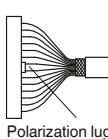

#### Features of permissible assemblies:

Cable type	Unshielded round cables FLK EZ-DR/.../...									Shielded round cables FLK EZ-DR-S/.../...			
	Assembly	10-pos.	14-pos.	16-pos.	20-pos.	26-pos.	34-pos.	40-pos.	50-pos.	14-pos.	16-pos.	40-pos.	50-pos.
No assembly	10U/C00/...	14U/C00/...	16U/C00/...	20U/C00/...	26U/C00/...	34U/C00/...	40U/C00/...	50U/C00/...	14S/C00/...	16S/C00/...	40S/C00/...	50S/C00/...	
10-pos. socket strip at both ends	10U/C55/... <sup>1)</sup>												
14-pos. socket strip at both ends		14U/C23/... <sup>1)</sup>								14S/C23/... <sup>1)</sup>			
16-pos. socket strip at both ends			16U/C58/... <sup>1)</sup>							16S/C58/... <sup>1)</sup>			
20-pos. socket strip at both ends				20U/C61/... <sup>1)</sup>									
26-pos. socket strip at both ends					26U/C63/... <sup>1)</sup>								
34-pos. socket strip at both ends						34U/C65/... <sup>1)</sup>							
40-pos. socket strip at both ends							40U/C30/... <sup>3)</sup>					40S/C30/... <sup>3)</sup>	
50-pos. socket strip at both ends								50U/C38/... <sup>2)</sup>					50S/C38/... <sup>2)</sup>
14-pos. socket strip at one end; 16-pos. socket strip at one end			14U/C52/... <sup>1)</sup>						14S/C52/... <sup>1)</sup>				

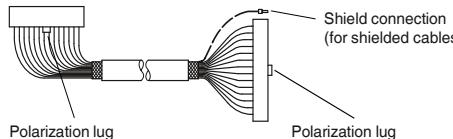

<sup>1)</sup> Socket strips assembled straight at both ends.

<sup>2)</sup> Socket strips assembled straight at one end and angled at the other.

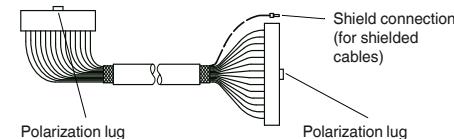

<sup>3)</sup> Socket strips assembled straight at one end and angled at the other.

## Universal cables

### System cable with D-SUB socket and pin strip

#### Standard lengths

Pre-assembled shielded round cables to connect the control level with the corresponding VARIOFACE interface modules.

- Assembly with D-SUB strips as per IEC 60807-2/DIN 41652, (1:1 connection).
  - D-SUB socket strip on one end and D-SUB pin strip on the other
  - D-SUB sockets on both ends
  - DSUB pin strips on both ends
  - Cable outlet: straight
  - Screw connection: 2 UNC 4-40 screws
- Special lengths and assembly versions are defined using an order key, refer to page 612.

**Socket strip at one end and pin strip at the other**

#### Technical data

Max. perm. operating voltage	125 V AC/DC
Max. perm. current carrying capacity per path	2 A
Max. conductor resistance	0.09 Ω/m

# System cabling for controllers

## Universal cables

### System cable with D-SUB socket and pin strip

#### Special lengths

Pre-assembled shielded **round cables** for connecting VARIOFACE termination boards. The cables are assembled with D-SUB strips in accordance with IEC 60807-2/DIN 41652.

The order key is defined by three features. The features in the appropriate sequence are:

- Cable type
  - Assembly
  - Length in meters
- There are three assembly variants of the shielded round cable:
- CABLE D-SUB-S/.../.../... D-SUB socket strip on one end and D-SUB pin strip on the other
  - CABLE D-SUB-B-B-S/.../.../... D-SUB socket strip at both ends

- CABLE D-SUB-S-S-S/.../.../... D-SUB pin strip at both ends  
The features necessary for clear identification of an order are described below:

#### Cable type

- The number of individual conductors of the cable is defined here.

#### Assembly

- (example for CABLE D-SUB-S/.../.../...)
- None,  
the cable is not assembled at either end
- 9-pos. D-SUB socket strip at one end and 9-pos. D-SUB pin strip at the other end, the cable connects (1:1) a 9-pos. D-SUB socket and pin strip

- 15-pos. D-SUB socket strip at one end 15-pos. D-SUB pin strip at the other end, the cable connects (1:1) a 15-pos. D-SUB socket and pin strip; or up to
- 50-pos. D-SUB socket strip at one end 50-pos. D-SUB pin strip at the other end, the cable connects (1:1) a 50-pos. D-SUB socket and pin strip.

#### Ordering example for round cable assembled with pin strip on one end and socket strip on the other end

- Unshielded 25-pos. round cable, assembled with one 25-pos. D-SUB socket strip and one 25-pos. D-SUB pin strip, 11.5 mm long

Quantity	Order No.	Cable type	Assembly	Length [m] <sup>1)</sup>
1	2302340	/ 25S	/ C36	11.50

<sup>1)</sup> min. 0.20 m

#### Ordering example for round cable assembled with socket strip at both ends

- Shielded 37-pos. round cable, assembled with two 37-pos. D-SUB socket strips, 12.75 m long

Quantity	Order No.	Cable type	Assembly	Length [m] <sup>1)</sup>
1	2302421	/ 37S	/ C44	12.75

<sup>1)</sup> min. 0.20 m

#### Ordering example for round cable assembled with pin strip at both ends

- Shielded 15-pos. round cable, assembled with two 15-pos. D-SUB pin strips, 8.5 m long

Quantity	Order No.	Cable type	Assembly	Length [m] <sup>1)</sup>
1	2302434	/ 15S	/ C71	8.50

<sup>1)</sup> min. 0.20 m

## Universal cables

### System cable with

**D-SUB socket or pin strip and one open end**

- 1:1 connection
- D-SUB socket or pin strip at one end
- Connector according to IEC 60807-2/DIN 41652
- Gland: 2 UNC 4-40 screws
- Open end at the other end
- Individual wire marking: 1, 2, 3, 4, etc.
- Individual wires fitted with ferrules
- Shield connection: H05V-K 1 mm<sup>2</sup> cable, black, 0.5 m in length

Socket strip at one end and open end at the other end

Pin strip at one end and open end at the other end

# System cabling for controllers

## Universal cables

### System cable with a 56-pos. ELCO/EDAC connector and an open end

Assembled system cable for connecting 56-pos. EDAC connectors from the 516 series or ELCO connectors from the 8016 series.

- Series 516 EDAC socket connector at one end
- Metal housing with lateral cable outlet
- Coding sockets in location 1 by default
- Open end at the other end
- Single wire marking: 1, 2, 3, ... 53, 54, Y, Z (see pin assignment)
- Shield connection on both ends:  
H05V-K 1 mm<sup>2</sup> cable, black, length: 0.5 m

56-pos. system cable

#### Notes:

The system cables are designed specifically for the UMK-EC56/56-XOR (2975900) and UMK-EC56/56-XOL (2975890) modules.

When using the UMK-EC56/FRONT 2,5/V/R (2976161) or UMK-EC56/FRONT 2,5/V/L (2976158) modules, the coding sockets must be adapted accordingly.

Observe the module and system cable layouts.

## Potential distributors

### Modules as compact potential distributors

The VIP-2.../PDM... modules offer the following features:

- Two potential levels
- Separate supply
- Screw or push-in connection
- Consecutive marking
- With fuse as an option

The modules UMK-PVB and UMK-PVB 6 have three or six potential levels.

#### Notes:

## Quality in quantity

### Integrated management system

The aim of the Phoenix Contact integrated management system is to coordinate all the requirements regarding products, processes, and organization.

Statutory and regulatory requirements, as well as those of international standards and our customers, are met and, in some cases, even exceeded in all phases of the product lifecycle.

The Phoenix Contact management system is monitored by internationally recognized independent bodies each year to ensure that quality, environmental protection, energy efficiency, and occupational safety have been integrated in conformance with the relevant requirements. Certification in accordance with international standards ISO 9001, ISO 14001, ISO 50001, and BS OHSAS 18001 is the result of our corporate philosophy of meeting the needs of our customers, staff, and environment as best as possible. They serve as the basis for innovative products with the familiar high Phoenix quality standard, actively practiced environmental protection through efficient production and products that conserve resources, and responsibility in the field of occupational health and safety. It goes without saying that we integrate all further requirements of standards, international approvals or special customer requirements into our company processes.

This system provides a building block for the success of the Phoenix Contact Group and its products and services.

### CE marking

CE marking was introduced as an important instrument for the free movement of goods and services within the single European market. By attaching the mark to a product, the manufacturer confirms that it complies with all applicable European Union (EU) directives. EC directives describe the product properties with regard to device safety and avoiding danger. These are legally binding regulations of the European Union (EU). In other words, compliance with the requirements is a **statutory condition for**

### marketing the product within the EU.

- Where applicable, the products that our company currently manufactures fall within the scope of the following directives:
- 2006/95/EC and 2014/35/EU  
Electrical equipment designed for use within certain voltage limits (Low-Voltage Directive)
  - 2004/108/EC and 2014/30/EU  
Electromagnetic compatibility (EMC Directive)
  - 2004/22/EC and 2014/32/EU  
Measuring instruments
  - 2006/42/EC  
Safety of machinery (Machinery Directive)
  - 94/9/EC and 2014/34/EU  
Equipment and protective systems intended for use in potentially explosive areas (ATEX Directive)
  - 1999/5/EC  
R&TTE Directive and 2014/53/EU  
Radio Equipment Directive

The standards upon which the specified directives are based have been part of our standard of development for a long time. This guarantees conformance with European directives. The numbers of the directives indicate their version at the time of publication. In the event of changes to directives and/or standards, our products will undergo conformity assessment again in good time and a new declaration of conformity will be issued promptly. The current declarations for each product can also be found in our download area.

The EMC Directive occupies a special place among the European directives listed. It defines electromagnetic compatibility as a fundamental property of devices based on mandatory guidelines. European Law therefore acknowledges the electromagnetic compatibility of devices and systems as an important condition for error-free operation of machinery and systems. Phoenix Contact is one of the leading international companies in surge protection, and therefore possesses broad expertise in EMC. This expertise and the experience gained over years of developing and applying industrial interface and communication technology have resulted in our products having an extremely high standard of quality with regard to electromagnetic compatibility. It was with a view to providing other companies with this expertise that our associate company, Phoenix Testlab, was founded. Phoenix Testlab GmbH is an independent, accredited service provider offering EMC testing that conforms to European standards. At Phoenix Testlab, devices are also tested with regard to their electrical safety, mechanical influences, and their behavior in relation to environmental influences. Furthermore, Phoenix Testlab is a "Notified Body" in

accordance with EMC Directive 2004/108/EC and according to R&TTE Directive 1999/5/EC for radio and telecommunications terminal equipment. As a "Telecom Certification Body" (TCB), Phoenix Testlab may also approve these products for markets in the USA, Canada, and Japan.

### Standards and regulations

All relevant standards and regulations are used as the basis for the development and maintenance of our products.

International standards are subject to continuous changes as a result of harmonization and new developments. In line with this process, the current version of all standards that are relevant to our products is documented in the product area on our website at [www.phoenixcontact.net/products](http://www.phoenixcontact.net/products).

### Online product information service on the web

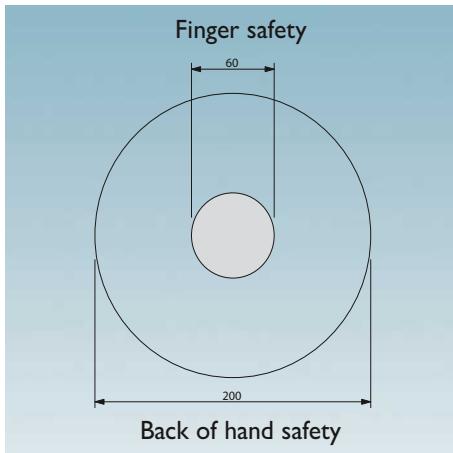

Phoenix Contact's product range is growing constantly.

Due to our commitment to product monitoring, all products are subject to improvement.

The Internet is an ideal platform to quickly communicate new product developments and improvements to the market.

You can quickly access the relevant Phoenix Contact website for your region via [www.phoenixcontact.com](http://www.phoenixcontact.com). Here, you will always find the latest overview of products, solutions, and services from Phoenix Contact. This includes technical documents, such as data sheets and user manuals, the latest driver and demo software, plus a means of contacting the appropriate contact person directly.

## Shock protection

Example: pressure actuation

The accident prevention regulations BGV A 2 issued by the German employer's liability insurance association for precision mechanics and electrical engineering apply to the operators of electrical systems and are aimed at the prevention of electrical accidents by means of special safety requirements.

These regulations contain specifications regarding the safety distances for work, operation, and occasional handling in the proximity of "live parts" in low-voltage systems up to 1000 V ~ or 1500 V –.

- Work with live parts is only permitted once they have been de-energized.
- Operational activities are only permitted in the vicinity of live parts if these parts are de-energized or are protected against direct contact (§ 6). The following safety measures apply when working in the vicinity of live parts:
- Provision of the de-energized state for the duration of the work
- Ensure shock protection is in place in the form of covers or barriers during the work
- Assurance that the permitted proximity limits will not be violated (§ 7).

The term "occasional handling" has been introduced for the operation of elements such as pushbuttons, rocker arms or rotary buttons in the proximity of live parts.

According to VDE 0105-1, this is covered by "operation with partial protection against direct contact".

Detailed specifications for "occasional handling" can be found in DIN VDE 0106-100. This specifies to what degree live parts in the proximity of operating elements are to be protected against contact. The basis for this is the definition of a "protection area for occasional handling"; this is the area into which the user must reach in order to handle the machine.

Finger safety

Back of hand safety

The most important thing is that an area formed by an even envelope curve 30 mm in radius must surround the live parts. This area must be **touch proof**, i.e., the live parts of the electrical device must not be within reach of the VDE test finger according to IEC 60529/DIN VDE 0470-1 (test finger).

Back of hand safety is specified for the "rest of the area" up to 100 mm around the operating element. **Back of hand safety** means that when a force of 50 N is applied to a ball with a diameter of 50 mm, this does not come into contact with the live parts of the equipment. No special measures for ensuring contact safety are stipulated outside this area.

Note: systems and equipment that are operated with SELV up to 25 V ~ or 60 V – are considered to be protected against "direct contact".

According to § 5, Subsection 4 of the BGV A 2 regulations, there is no need to test the condition of the system prior to initial startup if the company has confirmation from the manufacturer or installer that the electrical systems and equipment conform to BGV A 2. The confirmation required relates to systems and equipment that have been installed and are ready for operation and can only be issued by the installer or installation company. The manufacturer of the electrical equipment can only issue a confirmation that products have been produced in accordance with the relevant electrotechnical DIN VDE regulations stipulated in BGV A 2. The installer must bear this in mind when selecting the equipment to be used.

In the field of connection technology, Phoenix Contact offers a wide range of products that are touch proof or that can be protected against contact using covers. Depending on the conditions, all of this

must be taken into account when selecting the individual types of terminal block and accessories.

## Quality features of insulating housing

### Thermoplastics

The majority of our insulating housing is made from thermoplastic materials. Roughly speaking, these can be divided into amorphous and semi-crystalline substances. Thermoplastics are processed using the efficient and environmentally-friendly injection molding process. They have good recycling properties and can be re-used. We use many materials that are modified in different ways to meet the demanding requirements that electrical and electronic modules, devices, and systems have to meet with regard to their mechanical, thermal, and electrical properties.

### Behavior of plastics under the influence of temperature (operating temperatures, mechanical influences)

All plastics undergo a process referred to as thermal aging when they are subjected to heat over long periods. This process causes changes in the mechanical and electrical properties of the material. External influences, e.g., radiation, additional mechanical, chemical or electrical stresses, amplify this effect. Special tests on samples can yield characteristic data which provides a good means of drawing comparisons between different plastics. However, applying these characteristics to an evaluation of molded plastic parts is only possible to a limited extent, and can only give the designer a rough guide when it comes to selecting a plastic material. This catalog uses the following assessment criteria: the **RTI value** according to UL746B/ANSI 746 B (elec. based on electric strength) and the **Ti value** according to IEC 60216-1 (based on a 50% reduction in tensile strength after 20,000 hours).

IEC 60947-7-1/EN 60947-7-1 specifies a permissible temperature increase of 45 K for terminal blocks under nominal load. Phoenix Contact terminal blocks meet this requirement.

The properties of plastics are not only affected by the influence of heat as described above; they also undergo changes as a result of cold influences. When subjected to cold as well as low levels of humidity, plastics become increasingly brittle with the result that they are no longer capable of withstanding the same mechanical loads. As the table on the right shows, the plastics concerned can be used down to a temperature of -40°C, but only without a mechanical load. As far as the products presented in the catalog are concerned, it is the ambient temperature specified in each case that is to be regarded as definitive for operation. Regardless of the plastics used, this may be subject to further restrictions (e.g., limited to -20°C) as a result of the components used or other restrictive

parameters.

At very low temperatures, this means that any form of mechanical load on the plastic components must be avoided (e.g., mounting of products on/removal of products from the DIN rail, actuation of terminal points, locking/ejection of relays from bases, prizing out of jumpers, bending of cables and lines, etc.), as there is always an associated risk of damage. Unless otherwise indicated, it is recommended that you carry out the specified mounting/operational tasks in a temperature range from -10°C to +40°C.

### Inflammability characteristics of plastics (UL 94)

The inflammability tests for plastics have been defined by the Underwriters Laboratory (USA) in regulation UL 94. This applies to all usage ranges, but in particular to electrical engineering. A horizontal or vertical test is carried out at the test laboratory to determine the inflammability of the plastic material with a naked flame. In order of increasing flame-retardant behavior, the evaluation classes are HB, V2, V1, V0, and 5V. Test results are recorded on "yellow cards" and are published annually in the **Recognized Component Directory**.

### Thermoplastics: non-reinforced polyamide, PA

We use the modern, semi-crystalline polyamide insulation material, which has now become an essential component in electrical engineering and electronics. It has long occupied a leading position and is authorized for use by the relevant approval authorities such as the CSA, NEMKO, KEMA, PTB, SEV, UL, VDE, etc.

Polyamide also has excellent electrical, mechanical, chemical, and other properties, even at high operating temperatures. Brief peak temperatures up to approximately 200°C are permitted as a result of heat aging stabilization. Depending on the type (PA 4.6, 6.6, 6.10, etc.), its melting point is in the region of 215°C to 295°C.

Polyamide absorbs moisture from its surroundings, on average 2.8%. However, this moisture is not in the form of crystallization water in the plastic itself, but chemically bonded H<sub>2</sub>O groups in the molecule structure. This makes the plastic flexible and resistant to breakage, even at temperatures as low as -40°C. According to UL 94, PA belongs to inflammability class V2 to V0.

### Thermoplastics: polyester, PBT

We use the semi-crystalline thermoplastic polyester in non-reinforced and fiberglass-reinforced variants for special applications which require increased dimensional and form stability.

In addition to the high operating temperature, the material is characterized by excellent mechanical strength and hardness, and does not absorb moisture from its surroundings. PBT is therefore particularly suitable for strips, for example, which are soldered onto PCBs and subsequently have to pass a burn-in test while they are subjected to heat. According to UL 94, PBT belongs to inflammability class V2 to V0.

### Thermoplastics: polycarbonate, PC

Polycarbonate combines many advantages such as rigidity, impact strength, transparency, dimensional stability, good insulation properties, and resistance to heat.

This amorphous material only absorbs moisture to a very limited degree, and is used for items such as large, rigid electronic component housing.

In its transparent form, polycarbonate is particularly suitable for use as a material for cover profiles or marking materials.

PC has good resistance properties against mineral acids, saturated aliphatic hydrocarbons, gasoline, greases, and oils.

The material is less resistant to solvents, benzene, lyes, acetone, and ammonia. Strain cracks may result from contact with certain chemicals.

According to UL 94, PC belongs to inflammability class V2 to V0.

### Thermoplastics: polycarbonate fiber-reinforced, PC-F

Compared to non-reinforced materials, fiber-reinforced polycarbonates feature greater rigidity, impact strength, and operating temperature. In other respects, their properties are largely identical to those of non-reinforced polycarbonate.

## Thermoplastics: ABS

We use the thermoplastic molding compound ABS for products which must have good impact and notched impact properties in addition to high mechanical stability and rigidity. The products are resistant to chemicals and stress cracking due to their special surface quality and hardness.

The characteristic thermal properties provide good dimensional stability at both low and high temperatures. Products made from ABS can be coated with metallic surfaces, e.g., nickel.

The inflammability class of the molding compound used is HB to V0 according to UL 94.

Properties	Unit/level	Polyamide PA	Polyester PBT	Polycarbonate PC	Polycarbonate PC-F	ABS
Operating temperature RTI */**	°C	≤ 105	≤ 105	≤ 125	≤ 120	≤ 80
Minimum temperature (without mechanical load)	°C	-40	-40	-40	-40	-40
Electric strength acc. to IEC 60243-1/DIN VDE 0303-21	kV/cm	600	400	> 300		850
Resistance to creepage IEC 60112/DIN VDE 0303-1	CTI...M	550	225	175		200

\*\* Minimum value

## Dimensions

### Dimensions: Width/Height/Depth

The dimensions "Width/Height/Depth" are defined as follows for all DIN-rail-mountable products in the INTERFACE range:

- **Width:** measurement taken along the DIN rail
- **Height:** measurement taken across the DIN rail
- **Depth:** measurement taken starting from the mounting plate and including the NS 35/7,5 DIN rail (EN 60715)

The width, height, and depth never change, even if the products shown in this catalog happen to be photographed from two different perspectives (horizontal or vertical).

To make things easier for you, one of the above two symbols has been included next to each product photo:

## EMC: Class A product:

In accordance with statutory regulations, our products are indicated with this footnote if they are intended for use in industrial environments. This means that the permitted limit values for residential applications may be exceeded in the event of conducted and emitted disturbance variables. In such cases, the operator may have to take additional safety measures in order to ensure electromagnetic compatibility in residential applications.

## Note:

Subject to changes that serve the purpose of technical progress.

## Connection cross section

The rated cross section of terminal blocks must be specified by the manufacturer according to IEC 60947-7-1. The rated cross section is the maximum conductor cross section that can be connected in single, multi or fine-strand versions subject to specific thermal, mechanical, and electrical requirements.

The manufacturer must also specify the **rated connection capacity**, i.e., the area of the conductor that can be connected, as well as the number of conductors that can be connected simultaneously and the necessary preparation of the conductor ends. The conductors can be **solid (single or multi-**

### **strand) or stranded (fine-strand).**

These values can be found in the product-specific technical data.

The rated connection capacity of Phoenix Contact terminal blocks usually exceeds standard requirements, which specify that it must only be possible to connect one conductor with one of the two next smallest cross sections, excluding the rated cross section (standardized for the cross section range from 0.2 to 35 mm<sup>2</sup>).

In addition, conductors with a rated cross section can usually be wired with ferrules with plastic sleeve.

Phoenix Contact terminal blocks are

designed to allow copper cables to be connected to them without any special treatment. "Special treatment" or the use of ferrules – both permitted according to IEC 60947-7-1 – are not required. If ferrules are nevertheless used to protect stranded conductors against splicing, the connection capacity of the stranded conductor is generally reduced by one level.

## Structure and dimensions of connecting cables

Cross section [mm <sup>2</sup> ]	Single-strand		Multi-strand		Fine-strand		Gauge No. AWG	American Wire Gauge [AWG]			Stranded wires

## Tightening torque of terminal block screws

IEC 60947-1/EN 60947-1, modified, Table 4 specifies tightening torques for screw connections based on the screw size for electrical and mechanical type tests.

### Extract from IEC 60947-1/EN 60947-1, Table 4

The torque according to IEC and the recommended torque for Phoenix Contact terminal blocks are specified

Thread	Head screw with slot	
	Torque [Nm]	Recommended tightening torque [Nm]
M2.5 (M2.6)	0.4	0.4-0.5
M3	0.5	0.5-0.6
M3.5	0.8	0.8-1.0
M4	1.2	1.2-1.5

## Current carrying capacity

Standard IEC 60947-7-1/EN 60947-7-1/DIN VDE 0611-1 specifies the test currents for the individual conductor cross sections listed in the adjacent table. The corresponding currents are listed with the connection data for the individual terminal blocks. The type tests of terminal blocks are based on this data.

### Test currents according to IEC 60947-7-1/EN 60947-7-1, Table 5

Rated cross section [mm <sup>2</sup> ]	0.2	0.5	0.75	1.0	1.5	2.5	4	6	10	16
Test current [A]	4	6	9	13.5	17.5	24	32	41	57	76
